About the book	ix
Foreword	xi
Acknowledgements	xiii
Introduction	xvii

PART I THE FIRST FIVE ENERGY REVOLUTIONS — a time journey through the history of life —

Chapter 1 The Photo-Energy Revolution

The origin of life	3
The origin of sunlight	3
The origin of planet Earth	3
The origin of the living cell	5
The Thermophilic Regime	8
Photosynthesis and free oxygen	8
The origin of photosynthesis	8
Sunlight-driven energy technology	9
The Phototrophic Regime	10
And the face of the earth changed	11
Two grand carbon cycles	11
The self-inflicted crisis	12

Chapter 2 The Oxo-Energy Revolution

The origin of aerobic respiration	13
The origin of breathable air	13
Global oxygen crisis	14
Aerobic respiration	15
Oxygen-driven energy technology	16
Microbial symbiosis	18
The origin of the eukaryotic cell design	18
The microbial energy majors	20

The Aerobic Regime	21
Biological diversification	22
Ecological growth	24
And the face of the earth changed.	25
The changing landscape	25
Competition and adaptation	26
 Chapter 3 The Pyro-Energy Revolution	
The origin of hominids	29
It needed a crisis	29
The origin of human culture	30
The quest for the human advantage	32
Man the fire master	38
The human advantage	38
The origin of fire	41
Active use of fire	41
The Pyrocultural Regime	43
Societal metabolism	45
The Symbolisational Signal	46
And the face of the earth changed.	48
A changing lifestyle	48
And life changed the land	50
 Chapter 4 The Agro-Energy Revolution	
Man the solar farmer.	51
The Agricultural Revolution	51
The forces that shaped the revolution	52
The Agrocultural Regime	54
The emergence of competing energy chains	55
A new reality emerges.	56
The Quantificational Signal	56
The Scientific Revolution	57
And the face of the earth changed.	59
From farms to nation states	59
The growing human footprint	61
 Chapter 5 The Carbo-Energy Revolution	
Hydrocarbon Man	65
The agrocultural energy crisis	65
The dawn of ancient sunlight	66
The Carbocultural Regime	70

The Carbian Explosion	71
An explosion of competing energy chains	71
Electric energy as information carrier	74
Carbocultural non-fossil energy chains	76
Sensitive scientific senses	79
And the face of the earth changed	81
The surging human footprint	81
From fire master to fire addict	83

PART II THE NEXT ENERGY REVOLUTION — evolutionary energetics, models and scenarios —

Chapter 6 The Staircase of Energy Regimes

Energy regimes	87
The foundation of the Staircase model	87
The rise and fall of complexity	98
The evolution of information	101
Generating information	101
From genes to memes and artefacts	103
Socio-technological development	106
The rhythm of societal development	106
The pushes and pulls of progress	113
The evolution of system earth	114

Chapter 7 The Emerging Helio-Energy Revolution

Signs of a coming energy revolution	117
The Macroscopical Signal	117
Two perceptions of reality	119
Leaving Carbon Valley	121
Nuclear Valley	122
Green Valley	125
Sustainable development	128
Limits to nuclear	131
Limits to green	132
The next energy revolution	136
Symbian Man	136
The Helio-Energy Revolution	139
Sun Valley	143
Socio-metabolic complexes	145
And the face of the earth will change	147

Appendix Energy, Complexity and Evolution

The nature of energy	149
Energy-driven organisation	153
References	163
Glossary	171
Index	183
