Preface	xv
Abbreviations used in this book	xvii
Greek letters used in this book	xxi
Colour coding for molecules	xxiii
1 Viruses and their importance	1
At a glance	1
1.1 Viruses are ubiquitous on Earth	3
1.2 Reasons for studying viruses	3
1.3 The nature of viruses	4
1.4 The remainder of the book	7
Learning outcomes	7
Sources of further information	7
2 Methods used in virology	9
At a glance	9
2.1 Introduction to methods used in virology	11
2.2 Cultivation of viruses	12
2.3 Isolation of viruses	13
2.4 Centrifugation	13
2.5 Structural investigations of cells and virions	17
2.6 Electrophoretic techniques	17
2.7 Detection of viruses and virus components	18
2.8 Infectivity assays	22
2.9 Virus genetics	26
Learning outcomes	28
Sources of further information	28
3 Virus structure	31
At a glance	31
3.1 Introduction to virus structure	32
3.2 Virus genomes	32
3.3 Virus proteins	37
3.4 Capsids	39
3.5 Virion membranes	45
3.6 Occlusion bodies	47

3.7	Other virion components	47
	Learning outcomes	48
	Sources of further information	48
4	Virus transmission	49
	At a glance	49
4.1	Introduction to virus transmission	50
4.2	Transmission of plant viruses	51
4.3	Transmission of vertebrate viruses	54
4.4	Transmission of invertebrate viruses	56
4.5	Permissive cells	57
	Learning outcomes	58
	Sources of further information	58
5	Attachment and entry of viruses into cells	59
	At a glance	59
5.1	Overview of virus replication	60
5.2	Animal viruses	61
5.3	Bacteriophages	68
	Learning outcomes	68
	Sources of further information	68
6	Transcription, translation and transport	69
	At a glance	69
6.1	Introduction to transcription, translation and transport	70
6.2	Transcription of virus genomes	70
6.3	Transcription in eukaryotes	72
6.4	Translation in eukaryotes	77
6.5	Transport in eukaryotic cells	81
6.6	Transcription and translation in bacteria	83
	Learning outcomes	84
	Sources of further information	84
7	Virus genome replication	85
	At a glance	85
7.1	Overview of virus genome replication	86
7.2	Locations of virus genome replication in eukaryotic cells	88
7.3	Initiation of genome replication	88
7.4	Polymerases	89
7.5	DNA replication	90
7.6	Double-stranded RNA replication	91
7.7	Single-stranded RNA replication	92
7.8	Reverse transcription	92
	Learning outcomes	93
	Sources of further information	93

8	Assembly and exit of virions from cells	95
	At a glance	95
	8.1 Introduction to assembly and exit of virions from cells	96
	8.2 Nucleocapsid assembly	96
	8.3 Formation of virion membranes	98
	8.4 Virion exit from the infected cell	101
	Learning outcomes	101
	Sources of further information	102
9	Outcomes of infection for the host	103
	At a glance	103
	9.1 Introduction to outcomes of infection for the host	105
	9.2 Factors affecting outcomes of infection	105
	9.3 Non-productive infections	110
	9.4 Productive infections	112
	Learning outcomes	114
	Sources of further information	114
10	Classification and nomenclature of viruses	115
	At a glance	115
	10.1 History of virus classification and nomenclature	116
	10.2 Modern virus classification and nomenclature	116
	10.3 Baltimore classification of viruses	119
	Learning outcomes	119
	Sources of further information	120
11	Herpesviruses (and other dsDNA viruses)	121
	At a glance	121
	11.1 Introduction to herpesviruses	122
	11.2 The human herpesviruses	122
	11.3 The herpesvirus virion	123
	11.4 HSV-1 genome organization	124
	11.5 HSV-1 replication	124
	11.6 Latent herpesvirus infection	130
	11.7 Other dsDNA viruses	132
	Learning outcomes	135
	Sources of further information	135
12	Parvoviruses (and other ssDNA viruses)	137
	At a glance	137
	12.1 Introduction to parvoviruses	138
	12.2 Examples of parvoviruses	138
	12.3 Parvovirus virion	139
	12.4 Parvovirus replication	141

12.5	Other ssDNA viruses	143
	Learning outcomes	146
	Sources of further information	146
13	Reoviruses (and other dsRNA viruses)	147
	At a glance	147
13.1	Introduction to reoviruses	148
13.2	Rotavirus virion	148
13.3	Rotavirus replication	150
13.4	Other dsRNA viruses	155
	Learning outcomes	155
	Sources of further information	155
14	Picornaviruses (and other plus-strand RNA viruses)	157
	At a glance	157
14.1	Introduction to picornaviruses	158
14.2	Some important picornaviruses	158
14.3	Picornavirus Virion	160
14.4	Picornavirus replication	161
14.5	Picornavirus recombination	169
14.6	Picornavirus experimental systems	169
14.7	Other plus-strand RNA viruses	170
	Learning outcomes	172
	Sources of further information	172
15	Rhabdoviruses (and other minus-strand RNA viruses)	173
	At a glance	173
15.1	Introduction to rhabdoviruses	174
15.2	Some important rhabdoviruses	175
15.3	The rhabdovirus virion and genome organization	177
15.4	Rhabdovirus replication	177
15.5	Other minus-strand RNA viruses	183
15.6	Viruses with ambisense genomes	183
15.7	Reverse genetics	183
	Learning outcomes	184
	Sources of further information	184
16	Retroviruses	185
	At a glance	185
16.1	Introduction to retroviruses	186
16.2	Retrovirus virion	186
16.3	Retrovirus replication	188
16.4	Examples of retroviruses	194
16.5	Retroviruses as gene vectors	194
16.6	Endogenous retroviruses	194
	Learning outcomes	196
	Sources of further information	196

17	Human immunodeficiency viruses	197
	At a glance	197
17.1	Introduction to HIV	198
17.2	HIV virion	198
17.3	HIV genome	199
17.4	HIV-1 replication	199
17.5	HIV-1 variability	209
17.6	Progression of HIV infection	209
17.7	Prevention of HIV transmission	210
	Learning outcomes	211
	Sources of further information	211
18	Hepadnaviruses (and other reverse-transcribing DNA viruses)	213
	At a glance	213
18.1	Introduction to hepadnaviruses	214
18.2	Importance of HBV	214
18.3	HBV virion	215
18.4	Non-infectious particles	216
18.5	Soluble virus protein	216
18.6	HBV genome	216
18.7	HBV genetic groups	218
18.8	HBV replication	218
18.9	Prevention and treatment of HBV infection	225
18.10	Other reverse-transcribing DNA viruses	225
	Learning outcomes	227
	Sources of further information	227
19	Bacterial viruses	229
	At a glance	229
19.1	Introduction to bacterial viruses (bacteriophages)	230
	RNA PHAGES	231
19.2	Single-stranded RNA phages	231
19.3	Double-stranded RNA phages	237
	DNA PHAGES	237
19.4	Single-stranded DNA phages	237
19.5	Double-stranded DNA phages	246
	Learning outcomes	255
	Sources of further information	255
20	Origins and evolution of viruses	257
	At a glance	257
20.1	Introduction to origins and evolution of viruses	258
20.2	Origins of viruses	258
20.3	Evolution of viruses	261
	Learning outcomes	270
	Sources of further information	270

21	Emerging viruses	273
	At a glance	273
21.1	Introduction to emerging viruses	274
21.2	Viruses in new host species	274
21.3	Viruses in new areas	276
21.4	Viruses in new host species and in new areas	278
21.5	New viruses	279
21.6	Recently discovered viruses	281
21.7	Re-emerging viruses	281
21.8	Virus surveillance	282
21.9	Dealing with outbreaks	282
	Learning outcomes	283
	Sources of further information	283
22	Viruses and cancer	285
	At a glance	285
22.1	Introduction to viruses and cancer	286
22.2	Papillomavirus-linked cancers	287
22.3	Polyomavirus-linked cancers	287
22.4	Epstein-Barr virus-linked cancers	289
22.5	Kaposi's sarcoma	290
22.6	Adult T cell leukaemia	290
22.7	Hepatocellular carcinoma	290
22.8	Virus-associated cancers in animals	291
22.9	Cell lines derived from virus-associated cancers	291
22.10	How do viruses cause cancer?	291
22.11	Prevention of virus-induced cancers	295
	Learning outcomes	296
	Sources of further information	296
23	Survival of infectivity	297
	At a glance	297
23.1	Preservation of virus infectivity	298
23.2	Destruction of virus infectivity	298
23.3	Inactivation targets in virions	298
23.4	Inactivation kinetics	298
23.5	Agents that inactivate virus infectivity	299
	Learning outcomes	303
	Sources of further information	303
24	Virus vaccines	305
	At a glance	305
24.1	Introduction to virus vaccines	306
24.2	Live attenuated virus vaccines	306
24.3	Inactivated virus vaccines	307
24.4	Virion subunit vaccines	309
24.5	Live recombinant virus vaccines	309
24.6	Mass production of viruses for vaccines	310

24.7	Virus-like particles	311
24.8	Synthetic peptide vaccines	311
24.9	DNA vaccines	311
24.10	Storage and transport of vaccines	312
	Learning outcomes	313
	Sources of further information	313
25	Anti-viral drugs	315
	At a glance	315
25.1	Introduction to anti-viral drugs	316
25.2	Development of anti-viral drugs	316
25.3	Examples of anti-viral drugs	317
25.4	Drug resistance	322
25.5	Anti-viral drug research	324
	Learning outcomes	325
	Sources of further information	325
26	Prions	327
	At a glance	327
26.1	Introduction to prions	328
26.2	Transmissible spongiform encephalopathies	328
26.3	The nature of prions	328
26.4	Prion diseases	330
26.5	Prion strains	332
26.6	Prion transmission	332
26.7	The protein-only hypothesis	333
	Learning outcomes	333
	Sources of further information	333
	Virologists' vocabulary	335
	Index	349
