Preface	xi
Author biographies	xiii
Acknowledgments	xvii
List of figures	xix
1 Introduction to basic laboratory genetics	1
1.1 Transferring and handling <i>C. elegans</i>	5
1.2 Introduction to laboratory genetics	8
2 Gene expression analysis using transgenic animals	15
2.1 Transgenic gene expression analysis in <i>C. elegans</i> : lacZ staining	17
2.2 Transgenic gene expression analysis in <i>C. elegans</i> : GFP analysis	22
3 Creation and testing of transgenic yeast for use in protein-protein interaction screening	27
3.1 Small-scale transformation of <i>S. cerevisiae</i>	31
3.2 Transformation of <i>S. cerevisiae</i> to test for non-specific interaction	36
3.3 Assaying for protein-protein interaction by reporter gene expression	42
4 Yeast two-hybrid screening	47
4.1 Protein-protein interaction screening of a <i>C. elegans</i> cDNA library	47
4.2 Assaying for protein-protein interaction by reporter gene expression	54

5	Isolation and identification of interacting proteins	61
5.1	Preparation of electrocompetent <i>E. coli</i>	61
5.2	Isolation of DNA from yeast and electroporation of <i>E. coli</i>	65
5.3	Small-scale isolation of plasmid DNA from <i>E. coli</i> : the mini-prep	71
5.4	Sequencing of two-hybrid library plasmid DNA vectors	76
6	Using bioinformatics in modern science	83
6.1	DNA sequence chromatogram	84
6.2	BLASTing your sequence	85
6.3	Evaluating sequence results and choosing an RNAi target	86
6.4	Bioinformatics practice questions	89
7	Generation of an RNAi vector	93
7.1	Small-scale isolation of genomic DNA from <i>C. elegans</i>	93
7.2	PCR amplification of target gene sequence from <i>C. elegans</i> genomic DNA	97
7.3	Preparations for cloning to generate RNAi vector	105
7.3.1	Agarose gel electrophoresis	107
7.3.2	Removal of dNTPs from PCR reaction	110
7.3.3	Restriction enzyme digestion of PCR product and <i>C. elegans</i> RNAi vector	111
7.4	Gel purification of DNA and ligation of vector and PCR-amplified DNA	117
7.4.1	Preparative agarose gel electrophoresis	118
7.4.2	Gel purification of DNA from agarose gel	119
7.4.3	Ligation of vector and PCR-amplified DNA	121
7.5	Transformation of ligation reactions	122
7.6	PCR screening of transformation colonies	126
7.7	Small-scale isolation of plasmid DNA from <i>E. coli</i> : the mini-prep	130
7.8	Verifying successful ligation by restriction digestion	133
8	RNA-mediated interference by bacterial feeding	137
8.1	Preparation of RNAi-feeding bacteria for transformation	139
8.2	Media preparation for RNAi feeding	143
8.3	Transformation of RNAi-feeding strain HT115(DE3)	147
8.4	RNA interference by bacterial feeding of <i>C. elegans</i>	150
8.5	Analyzing effects of dsRNAi	156
8.5.1	Assaying for sterility (Ste) or embryonic lethality (Emb)	158
8.5.2	Assaying for growth effect	159
8.5.3	Assaying for morphological effects	159
8.5.4	Assaying for general neuromuscular effects	161
8.5.5	Assaying for specific neuronal effects	163
8.5.6	Assaying for dauer formation	165

Appendix I Recombinational cloning	169
AI.1 Isolation of genomic DNA from <i>C. elegans</i>	170
AI.2 PCR amplification of target gene sequence from <i>C. elegans</i> genomic DNA	170
AI.3 Agarose gel electrophoresis and clean-up of PCR reaction	171
AI.4 Entry vector cloning	171
AI.5 Small-scale isolation of plasmid DNA from <i>E. coli</i> : the mini-prep	173
AI.6 Destination vector cloning	174
AI.7 Small-scale isolation of plasmid DNA from <i>E. coli</i> : the mini-prep	176
Appendix II Recipes and media preparation	177
Solution recipes	177
Media preparation	182
Appendix III Sterile techniques and worm protocols	197
Sterile techniques	197
Worm protocols	199
Appendix IV Mutant <i>C. elegans</i> phenotypes	205
Appendix V Vector maps	215
Subject index	219
