Post-Translational Modifications to Regulate Protein Function	1	Stereochemistry of Biological Molecules	384
Pre-mRNA Splicing	31	Steroid Hormones	395
Programmed Cell Death as a Therapeutic Approach	41	Supported Lipid Bilayers	411
Protease Inhibitors: Mechanisms	49	Symbiosis, Chemical Biology of	423
Proteasome, Chemistry of	61	Synthetic Chemistry: Formation of the Amide Bond	436
Protein and DNA Thermostability	75	Synthetic Peptides and Proteins to Elucidate Biological Function	453
Protein Folding: Energetics	86	Synthetic Peptide Templates for Molecular Recognition	464
Protein Misfolding and Disease	101	Synthetic Sphingolipids as Bioactive Molecules	480
Protein-Protein Interactions	114	Systems Approach to Metabolism	505
Protein-Protein Interactions: Modulation with Small Molecules	121	Systems Approach to Studying Disease	512
Proteins: Array-Based Techniques	144	Taste, Chemical Biology of	520
Proteins: Chemistry and Chemical Reactivity	158	Terpenoids in Plant Signaling: Chemical Ecology	532
Proteins: Computational Analysis	174	Thrombin	539
Protein Trafficking Diseases: Small Molecule Approaches	182	Tissues and Organs: Synthesis	544
Quorum Sensing	191	Transcription-Based Therapeutics	557
Ras Oncoproteins	199	Transcription Factors	566
Receptor-Ligand Interactions in Biological Systems	208	Transcription: Initiation	584
Ribosome, Chemistry of	222	Transcript Profiling Tools	596
RNA Interference: Mechanisms and Proteins Involved	231	Transient State Enzyme Kinetics	605
RNA Interference to Treat Human Diseases	241	Translational Recoding	613
RNA: Noncoding	252	Tumor Cell Energetic Metabolome	624
RNA Stability: Chemistry, Measurement and Modulation	263	Two- and Three- Hybrid Systems	636
Saliva in Health and Disease, Chemical Biology of	276	Ubiquitin Proteasome Pathway	650
Schizophrenia: Biological Mechanisms	285	Unnatural Amino Acids to Investigate Biological Processes	659
Second Messengers in Cellular Signaling	295	Unraveling Cell Division Mechanisms with Small-Molecule Inhibitors	670
Serine Proteases and Serine Protease Inhibitors	305	Viral Cysteine Peptidases and Cysteine Peptidase Inhibitors	681
Signaling Networks in Biology	313	Water in Biological Recognition Processes	694
Single-Molecule Studies of Biomolecules	326	Water, Properties of	701
Small Molecule Inhibitors: Design and Selection	341	Watson-Crick Base Pairs: Character and Recognition	710
Solid-Phase Synthesis of Biomolecules	354	Xenobiotic Metabolism	721
Starch Biosynthesis in Plants	362		
Stem Cell Fates: Control by Small Molecules	376	Index	733
