|------------------------------------------------------------------|-------------|
| <b>Preface</b>                                                   | <b>xv</b>   |
| <b>Acknowledgments</b>                                           | <b>xvii</b> |
| <b>Note on Statistical Software</b>                              | <b>xix</b>  |
| <br>                                                             |             |
| <b>1 ARE THE DATA NORMALLY DISTRIBUTED?</b>                      | <b>1</b>    |
| 1.1 Introduction                                                 | 1           |
| 1.2 Types of Data and Scores                                     | 2           |
| 1.3 Scenario                                                     | 3           |
| 1.4 Data                                                         | 3           |
| 1.5 Analysis: Fitting the Normal Distribution                    | 3           |
| 1.5.1 How Is the Analysis Carried Out?                           | 3           |
| 1.5.2 Interpretation                                             | 3           |
| 1.6 Conclusion                                                   | 5           |
| <br>                                                             |             |
| <b>2 DESCRIBING THE NORMAL DISTRIBUTION</b>                      | <b>7</b>    |
| 2.1 Introduction                                                 | 7           |
| 2.2 Scenario                                                     | 8           |
| 2.3 Data                                                         | 8           |
| 2.4 Analysis: Describing the Normal Distribution                 | 8           |
| 2.4.1 Mean and Standard Deviation                                | 8           |
| 2.4.2 Coefficient of Variation                                   | 10          |
| 2.4.3 Equation of the Normal Distribution                        | 10          |
| 2.5 Analysis: Is a Single Observation Typical of the Population? | 11          |
| 2.5.1 How Is the Analysis Carried Out?                           | 11          |
| 2.5.2 Interpretation                                             | 11          |
| 2.6 Analysis: Describing the Variation of Sample Means           | 12          |
| 2.7 Analysis: How to Fit Confidence Intervals to a Sample Mean   | 12          |
| 2.8 Conclusion                                                   | 13          |
| <br>                                                             |             |
| <b>3 TESTING THE DIFFERENCE BETWEEN TWO GROUPS</b>               | <b>15</b>   |
| 3.1 Introduction                                                 | 15          |
| 3.2 Scenario                                                     | 16          |
| 3.3 Data                                                         | 16          |

|          |                                                                     |           |
|----------|---------------------------------------------------------------------|-----------|
| 3.4      | Analysis: The Unpaired $t$ Test                                     | 16        |
| 3.4.1    | How Is the Analysis Carried Out?                                    | 16        |
| 3.4.2    | Interpretation                                                      | 18        |
| 3.5      | One-Tail and Two-Tail Tests                                         | 18        |
| 3.6      | Analysis: The Paired $t$ Test                                       | 18        |
| 3.7      | Unpaired versus the Paired Design                                   | 19        |
| 3.8      | Conclusion                                                          | 19        |
| <b>4</b> | <b>WHAT IF THE DATA ARE NOT NORMALLY DISTRIBUTED?</b>               | <b>21</b> |
| 4.1      | Introduction                                                        | 21        |
| 4.2      | How to Recognize a Normal Distribution                              | 21        |
| 4.3      | Nonnormal Distributions                                             | 22        |
| 4.4      | Data Transformation                                                 | 23        |
| 4.5      | Scenario                                                            | 24        |
| 4.6      | Data                                                                | 24        |
| 4.7      | Analysis: Mann–Whitney $U$ test (for Unpaired Data)                 | 24        |
| 4.7.1    | How Is the Analysis Carried Out?                                    | 24        |
| 4.7.2    | Interpretation                                                      | 24        |
| 4.8      | Analysis: Wilcoxon Signed-Rank Test (for Paired Data)               | 25        |
| 4.8.1    | How Is the Analysis Carried Out?                                    | 25        |
| 4.8.2    | Interpretation                                                      | 26        |
| 4.9      | Comparison of Parametric and Nonparametric Tests                    | 26        |
| 4.10     | Conclusion                                                          | 26        |
| <b>5</b> | <b>CHI-SQUARE CONTINGENCY TABLES</b>                                | <b>29</b> |
| 5.1      | Introduction                                                        | 29        |
| 5.2      | Scenario                                                            | 30        |
| 5.3      | Data                                                                | 30        |
| 5.4      | Analysis: $2 \times 2$ Contingency Table                            | 31        |
| 5.4.1    | How Is the Analysis Carried Out?                                    | 31        |
| 5.4.2    | Interpretation                                                      | 31        |
| 5.4.3    | Yates' Correction                                                   | 31        |
| 5.5      | Analysis: Fisher's $2 \times 2$ Exact Test                          | 31        |
| 5.6      | Analysis: Rows $\times$ Columns ( $R \times C$ ) Contingency Tables | 32        |
| 5.7      | Conclusion                                                          | 32        |
| <b>6</b> | <b>ONE-WAY ANALYSIS OF VARIANCE (ANOVA)</b>                         | <b>33</b> |
| 6.1      | Introduction                                                        | 33        |
| 6.2      | Scenario                                                            | 34        |
| 6.3      | Data                                                                | 34        |

|          |                                                                |           |
|----------|----------------------------------------------------------------|-----------|
| 6.4      | Analysis                                                       | 35        |
| 6.4.1    | Logic of ANOVA                                                 | 35        |
