PREFACE TO SERIES

xiii

INTRODUCTION

xv

1 Reactive Species

1

1.1 Diseases

3

1.1.1 Neurodegenerative Diseases

3

1.1.1.1 Alzheimer's Disease

5

1.1.1.2 Parkinson's Disease

5

1.1.2 Metals in Human Diseases

6

1.2 Protein Structure

9

1.2.1 Oxidative Labeling

10

1.2.1.1 Carbonyl Labeling

10

1.2.1.2 Cysteine Residue Labeling

10

1.2.1.3 Reactive Species Labeling

10

1.2.1.4 Hydroxyl Radical Labeling

12

1.2.2 Other Techniques

13

1.3 Reactive Species

20

1.3.1 Halogen Species

20

1.3.2 Oxygen Species

21

1.3.3 Nitrogen Species

22

1.3.4 Sulfur Species

22

1.3.5 High-Valent Cr, Mn, and Fe Species

25

vii

1.4	Reactive Species in Environmental Processes	26
1.4.1	Atmospheric Environment	26
1.4.2	Disinfection By-Products (DBP)	27
1.4.3	Oxidation Processes for Purifying Water	29
	References	30
2	Acid-Base Properties	52
2.1	Dissociation Constants	54
2.2	Speciation	62
2.2.1	Protonation	62
2.2.2	Metal Complexes	63
2.2.2.1	Iron	64
2.2.2.2	Copper, Zinc, and Nickel	66
	References	69
3	Halogenated Species	78
3.1	Hypohalogens	79
3.1.1	Hypochlorite	79
3.1.1.1	Kinetics of HOCl	79
3.1.1.2	Products of HOCl Oxidation	83
3.1.2	Hypobromite	88
3.1.2.1	Kinetics of HOBr	88
3.1.2.2	Products of HOBr Oxidation	89
3.1.3	Hypothiocyanous	90
3.1.3.1	Kinetics of HOSCN	91
3.1.3.2	Products of HOSCN Oxidation	92
3.2	Halamines	93
3.2.1	Hydrolysis of Halamines	93
3.2.2	Halogen Transfer by Halamines	94
3.2.3	Reduction of Halamines	96
3.3	Chlorine Dioxide	96
3.3.1	Generation of ClO ₂	101
3.3.2	Decomposition of ClO ₂	101
3.3.3	Reactivity of ClO ₂	104
3.3.3.1	Amino Acids, Peptides, and Proteins	104
3.4	Conclusions	109
	References	110
4	Reactive Oxygen Species	122
4.1	Superoxide	122
4.1.1	Generation	122
4.1.2	Properties	123

26	4.1.3 Reactivity	125
26	4.1.4 Metalloenzymes	129
27	4.1.4.1 Manganese Superoxide Dismutase	131
29	4.1.4.2 Iron Superoxide Dismutase	134
30	4.1.4.3 Iron Superoxide Reductase (FeSOR)	135
	4.2 Singlet Oxygen	140
52	4.2.1 Reactivity	142
54	4.3 Ozone	153
62	4.3.1 Reactivity	154
62	4.4 Hydroxyl Radical	162
63	4.4.1 Generation	162
64	4.4.2 Reactivity	164
66	4.4.2.1 Main-Chain Cleavage of Protein	165
69	4.4.2.2 Oxidation of Amino Acid Side Chains	169
	Aliphatic Side Chains	169
	Sulfur-Containing Side Chains	172
78	Acidic Side Chains	175
79	Basic Side Chains	175
79	Aromatic Side Chains	177
79	4.5 Conclusions	179
83	References	182
88		
88	5 Reactive Inorganic Oxy-Species of C, N, S, and P	205
89	5.1 Carbon Species	206
90	5.1.1 Carbonate Radical	206
91	5.1.1.1 Generation and Properties	206
92	5.1.1.2 Reactivity	210
93	5.1.2 Peroxymonocarbonate	217
93	5.1.2.1 Reactivity	217
94	5.1.3 Carboxyl Radical	219
96	5.2 Nitrogen Species	220
96	5.2.1 Nitrogen Monoxide	220
101	5.2.2 Nitrogen Dioxide Radical	223
101	5.2.3 Peroxynitrite	224
104	5.2.3.1 Generation	224
104	5.2.3.2 Decomposition in Aqueous Solution	226
109	5.2.3.3 Reactivity with CO ₂	228
110	5.2.3.4 Reactivity with Inorganic and Organic Substrates	229
122	5.2.3.5 Reactivity with Proteins and Nonprotein Metal Centers	231
122	5.2.3.6 Reactivity with Amino Acids, Peptides, and Proteins	233
123		

5.3 Sulfur Species	241
5.3.1 Oxsulfur Radicals	241
5.3.1.1 Generation	241
5.3.1.2 Reactivity	244
5.4 Phosphorous Species	246
5.4.1 Phosphate Radicals	246
5.4.1.1 Generation, Equilibria, and Spectral Characteristics	247
5.4.1.2 Reactivity	248
5.5 Conclusions	250
References	252
6 High-Valent Cr, Mn, and Fe Species	278
6.1 Chromium	279
6.1.1 Aqueous Chemistry of Oxo-Cr Compounds	280
6.1.1.1 Cr(III)	280
6.1.1.2 Cr(VI)	280
6.1.1.3 Cr(III) Superoxo and Hydroperoxo Complexes	281
6.1.1.4 Aqueous Cr(IV) Ion	281
Acid medium	281
Alkaline Medium	282
6.1.1.5 Cr(V)	283
6.1.2 Chromium(VI, V, and IV) Complexes	284
6.1.3 Reduction of Cr(VI/V/IV) by Substrates	285
6.1.4 Reactivity of Cr Species	286
6.1.4.1 Fe(II) Complexes	286
6.1.4.2 Hydrogen Peroxide	287
6.1.4.3 Carbohydrates	287
6.1.4.4 Hydroxy Acids	287
6.1.4.5 Ascorbic Acid	288
6.1.4.6 Catecholamines	288
6.1.4.7 Thiols	289
6.1.4.8 Non-Sulfur-Containing Amino Acids and Peptides	291
6.1.4.9 Proteins	291
6.1.4.10 NADPH/NADP	292
6.1.4.11 Nitric Oxide Synthase (NOS)	292
6.1.5 Mechanism	292
6.1.6 Carcinogenesis	295
6.1.7 Genotoxicity and Cytotoxicity	298
6.1.8 Conclusions	302
6.2 Manganese	302
6.2.1 Aqueous Chemistry of Oxo-Mn Compounds	305
6.2.1.1 Mn(III)	305

241	6.2.1.2 Mn(IV)	308
241	6.2.1.3 Mn(V) and Mn(VI)	308
241	6.2.2 Reactivity of Complexes of Hypervalent Mn	312
244	6.2.3 Oxidation by Mn(VII)	313
246	6.2.3.1 Amino Acids	314
246	6.2.3.2 Aminopolycarboxylates (APCs)	319
	6.2.4 Conclusions	322
247	6.3 Iron	322
248	6.3.1 Iron(IV) and Iron(V)	325
250	6.3.1.1 Ferryl(IV) Ion	325
252	6.3.1.2 Iron(IV)- and Iron(V)-Oxo Complexes	330
	6.3.1.3 Ferrate(IV)	338
	6.3.1.4 Ferrate(V) and Ferrate(VI)	339
	6.3.2 Reactivity of Ferrate(V) and Ferrate(VI)	340
279	6.3.2.1 Amines	341
280	6.3.2.2 Amino Acids	343
280	6.3.2.3 Aminopolycarboxylates	353
280	6.3.3 Conclusions	356
281	References	357
