

CONTENTS

Chapter 1—Cell Growth

1

- 1.1 Exponential Growth or Decay, 1
- 1.2 Determination of Growth or Decay Rates, 4
- 1.3 The Method of Least Squares, 6
- 1.4 Nutrient Uptake by a Cell, 8
- 1.5 Inhomogeneous Differential Equations, 10
- 1.6 Growth of a Microbial Colony, 11
- 1.7 Growth in a Chemostat, 17
- 1.8 Interacting Populations: Predator–Prey System, 23
- 1.9 Mutation and Reversion in Bacterial Growth, 31
- Problems, 37

Chapter 2—Enzyme Kinetics

46

- 2.1 The Michaelis–Menten Theory, 47
- 2.2* Early Time Behavior of Enzymatic Reactions, 51
- 2.3 Enzyme–Substrate–Inhibitor System, 56
- 2.4 Cooperative Properties of Enzymes, 60
- 2.5 The Cooperative Dimer, 66
- 2.6 Allosteric Enzymes, 71
- 2.7 Other Allosteric Theories, 79
- 2.8 Hemoglobin, 81
- 2.9 Graph Theory and Steady-State Enzyme Kinetics, 85
- 2.10 Enzyme–Substrate–Modifier System, 89
- 2.11 Enzyme–Substrate–Activator System, 94
- 2.12 Aspartate Transcarbamylase, 97
- Problems, 100

Chapter 3—Tracers in Physiological Systems**104**

- 3.1 Compartment Systems, 104
- 3.2 The One-Compartment System, 107
- 3.3 Indicator-Dilution Theory, 109
- 3.4 Continuous Infusion, 113
- 3.5 The Two-Compartment System, 116
- 3.6 Leaky Compartments and Closed Systems, 122
- 3.7 The Method of Exponential Peeling, 124
- 3.8 Creatinine Clearance: A Two-Compartment System, 127
- 3.9 The "Soaking Out" Experiment, 128
- 3.10 The Three-Compartment Catenary System, 134
- 3.11* The n -Compartment System, 138
Problems, 145

Chapter 4—Biological Fluid Dynamics**156**

- 4.1 The Equations of Motion of a Viscous Fluid, 156
- 4.2 Poiseuille's Law, 159
- 4.3 Properties of Blood, 161
- 4.4 The Steady Flow of Blood Through a Vessel, 165
- 4.5 The Pulse Wave, 171
- 4.6 The Swimming of Microorganisms, 175
Problems, 188

Chapter 5—Diffusion in Biology**196**

- 5.1 Fick's Laws of Diffusion, 196
- 5.2 The Fick Principle, 198
- 5.3 The Unit One-Dimensional Source Solution, 202
- 5.4 The Diffusion Constant, 205
- 5.5 Olfactory Communication in Animals, 211
- 5.6 Membrane Transport, 214
- 5.7 Diffusion Through a Slab, 221
- 5.8 Convective Transport: Ionic Flow in an Axon, 227
- 5.9 The Gaussian Function, 232
- 5.10 Ultracentrifugation, 234
- 5.11 The Sedimentation Velocity Method, 240
- 5.12* An Approximate Solution to the Lamm Equation, 245
- 5.13 Sedimentation Equilibrium, 250
- 5.14 Transcapillary Exchange, 257
Problems, 262

CONTENTS	xiii
Solutions to Problems	278
References	342
Appendix A: Brief Review	348
Appendix B: Determinants, Vectors, and Matrices	364
Author Index	375
Subject Index	379
