<i>Preface</i>	<i>Page xi</i>
Abbreviations	xiii
 1 Introduction	 1
Classification of ferns and other pteridophytes	3
 PART I: THE BEGINNING	 7
2 The spore – beginning of the gametophytic phase	9
Sporogenesis	9
Morphogenesis of spore maturation	16
General comments	25
3 Physiology of spore germination	27
Viability and other physiological attributes of spores	28
Light and spore germination	31
Other factors controlling germination	43
Germination of spores of heterosporous pteridophytes	52
General comments	52
4 Cell determination and morphogenesis during germination	54
Polarity of the spore	54
Preparations for germination	59
The germinated spore	69
Patterns of spore germination	78
General comments	80
5 Biochemical cytology and biochemistry of germination	83
Histochemical changes	84
General metabolism of germinating spores	86
Fate of storage reserves	87
Nucleic acid and protein metabolism during germination	90
General comments	102
 PART II: GROWTH AND MATURATION	 105
6 Developmental physiology of gametophytes – the germ filament	107
Role of cell division and cell elongation in germ filament growth	107
Light and growth of the germ filament	111
	vii

Physiological gradients and polarity	126
General comments	128
7 Developmental physiology of gametophytes – induction of planar growth	130
Morphogenesis of gametophytes	130
Light and planar growth of gametophytes	133
Division of the terminal cell	144
Cell division, cell elongation and planar growth	146
Photosynthesis and photomorphogenesis	150
General comments	151
8 Role of protein and nucleic acid synthesis in planar growth	152
Protein synthesis	152
RNA synthesis	156
Effects of inhibitors of RNA and protein synthesis	158
A model and some perspectives	165
General comments	166
9 Vegetative and reconstitutive growth of gametophytes	168
Vegetative growth of gametophytes	169
Growth requirements of gametophytes in culture	174
Regenerative growth of gametophytes	180
Formation of tubers and gemmae	188
Neoplastic growth and regeneration of fern prothalli	190
General comments	195
PART III: REPRODUCTIVE STRATEGIES	197
10 Control of differentiation of sex organs on gametophytes	199
Antheridium development	199
Discovery of antheridiogens	202
Antheridiogen activity and gibberellins	208
Chemical nature of antheridiogens	211
Physiological aspects of antheridiogen action	212
Archegonium development and differentiation	218
General comments	219
11 Sexuality and genetics of gametophytes	221
The blight of homozygosity	221
Breeding systems	224
Natural reproductive biology of ferns	235
General comments	237
12 Gametogenesis and fertilization	238
Spermatogenesis	238
Oogenesis	247
Fertilization	253
General comments	258

PART IV: DEVELOPMENTAL OPTIONS	259
13 Apogamy – an alternate developmental program of gametophytes	261
Obligate apogamy	262
Induced apogamy	267
Origin and development of the apogamous sporophyte	273
Cytology of apogamy	275
General comments	279
14 Apospory – formation of gametophytes without meiosis	280
Natural apospory	280
Induced apospory	281
Origin and development of aposporous gametophytes	289
Nuclear cytology of apospory	290
Factors influencing apospory	291
Apogamy, apospory and alternation of generations	293
General comments	294
