Preface	xiii
1 Introduction	1
1.1 Five points of view	1
1.2 The functional organization of living systems	4
1.3 Objects and limitations	6
2 Outline of thermodynamic theory	8
2.1 Presuppositions	8
2.2 General laws	9
2.3 Historical outline	11
2.4 Formulation and solution of problems	13
3 Concepts, definitions and state properties	16
3.1 Control mass (CM) and control volume (CV)	16
3.2 Balance equations for control mass and control volume	18
3.2.1 Balance equation for a control mass	19
3.2.2 The Reynolds transport equation	19
3.2.3 Balance equation for a control volume	21
3.3 Conservation of mass	21
3.4 Energy	22
3.4.1 Kinetic energy	23
3.4.2 Potential energy	24
3.4.3 Internal energy	27
3.5 Work	28
3.5.1 Reversible forms of work	29
3.5.2 Mechanical work	30
3.5.3 Electrical and magnetic work	33
3.5.4 Chemical work	35

3.6	Heat	36
3.6.1	Temperature	39
3.6.2	Calculation of heat transfer	39
3.7	Summary of energy forms	45
3.8	State properties of a pure substance	45
3.8.1	State	46
3.8.2	Extensive and intensive state properties	47
3.8.3	The Gibbs relation	47
3.8.4	Equation of state in terms of measurable quantities	48
3.8.5	The ideal gas	49
3.8.6	The incompressible liquid	52
3.9	Mixtures	53
3.9.1	Composition	54
3.9.2	Conservation of mass	56
3.9.3	Reaction equations	57
3.10	State properties of mixtures	58
3.10.1	Relations between state properties of mixtures	59
3.10.2	Partial specific state properties	61
3.10.3	Ideal mixtures	62
3.10.4	Ideal gas mixture. Ideal liquid mixture	63
3.10.5	Non-ideal mixtures. Activities	66
3.11	Electrochemical state properties	70
3.12	Processes in living systems	71
4	<i>Conservation of energy (the first law)</i>	75
4.1	Energy conservation for control mass	75
4.2	Energy conservation for control volume	77
4.3	General considerations of energy conservation	80
4.3.1	Energy transformations	80
4.3.2	Energy expenditure in living systems	81
4.3.3	Energy efficiencies	83
4.4	Thermal and mechanical energy transformations	90
4.4.1	Some processes in a control mass	90
4.4.2	Some processes for control volumes	93
4.4.3	Fluid flow with and without friction	99
4.5	Chemical-thermal-mechanical energy transformations	107
4.5.1	Absolute values of state properties	108
4.5.2	Steady combustion reaction	111
4.5.3	Unsteady reactions. Generalization	115
4.5.4	Biological fuels. Indirect calorimetry	117
4.5.5	Coupled chemical reactions	122

4.5.6	Photosynthesis	124
4.6	Electrochemical energy transformation	126
4.7	Model of a biological system	131
5	<i>Increase of entropy (the second law)</i>	138
5.1	The second law for control mass and control volume	139
5.2	The entropy balance. Entropy production and irreversibility	141
5.3	Thermal and mechanical processes	142
5.4	Chemical-thermal-mechanical processes	149
5.4.1	Generalization	149
5.4.2	Coupled chemical reactions	156
5.4.3	Photosynthesis	157
5.5	Electrochemical processes	158
5.6	Model of a biological system	160
6	<i>Thermodynamic equilibrium</i>	163
6.1	Equilibrium in a simple system	164
6.1.1	Maximal entropy for an isolated system	164
6.1.2	Alternative conditions for equilibrium	165
6.2	Equilibrium between subsystems	167
6.3	Thermomechanical equilibrium	169
6.4	Non-reactive electrochemical equilibrium	171
6.4.1	Phase equilibria. The Gibbs phase rule	171
6.4.2	One-component phase equilibrium. The Clapeyron equation	172
6.4.3	Two-component phase equilibrium	173
6.4.4	Membrane equilibrium	176
6.5	Chemical reaction equilibrium. The law of mass action	183
7	<i>Thermodynamic non-equilibrium</i>	191
7.1	Local non-equilibrium. Chemical reaction	192
7.2	Global non-equilibrium. Spatial transport processes	196
7.2.1	Discrete spatial non-equilibria	196
7.2.2	Continuous spatial non-equilibria	200
7.2.3	Membrane systems	209
7.3	Irreversible thermodynamics	213
7.4	Model of membrane transport in cells	215

8	<i>Expenditure of exergy (exergy balance)</i>	222
8.1	Useful energy	223
8.1.1	Definition	225
8.1.2	Energy in transit	225
8.1.3	Pure substance. Thermomechanical exergy	226
8.1.4	Mixtures. Thermal-mechanical-chemical exergy	227
8.2	Balance of exergy	228
8.2.1	General form	228
8.2.2	Biological systems	229
8.3	Expenditure of exergy	231
8.3.1	Exergy expenditure in biological systems	232
8.3.2	Exergy efficiencies	233
8.3.3	The irreversibility	233
8.3.4	Thermal and mechanical exergy transformation	234
8.4	Chemical-thermal-mechanical processes	236
8.4.1	Chemical reactions and photosynthesis	236
8.4.2	Coupled chemical reactions	237
8.4.3	Electrochemical processes. Maintenance of structures	239
8.5	Model of a biological system	243
8.6	Concluding remarks about structures	249
	 Appendix A Symbols	 251
	 Appendix B B.1 Dimensions and units	 255
	B.2 Conversion factors	256
	B.3 Constants	256
	 Appendix C Selected state properties	 257
	C.1 (Enthalpy, Gibbs energy and entropy of formation; heat capacity)	257
	C.2 (Standard enthalpies and Gibbs energies of reaction)	258
	 References	 260
	 Index	 263
