

Contents

Preface		xi
Chapter 1 Measurement – A game of Snakes and Ladders		1
<i>J.L. Monteith</i>		
Chapter 2 Radiation		5
<i>J.E. Sheehy</i>		
The nature of radiation		5
Terminology and units		7
Type of radiation detector		10
Example		12
Common assumptions and radiation measurements		12
Instrument developments (1971-1983)		14
Detector and plant responses		16
Accuracy, repeatability and calibration		17
Lasers and Optoacoustics		18
Chapter 3 The measurement of carbon dioxide in air		29
<i>P.G. Jarvis and A.P. Sanford</i>		
Introduction		29
Infra-red gas analysers		29
Principle of infra-red gas analysers		30
Dispersive infra-red gas analysers		32
Non-dispersive infra-red gas analysers		33
Eddy correlation specials		43
Calibration of infra-red analysers		46
Calculation of fluxes		50
CO ₂ Measurement in the future		52
Chapter 4 Water vapour measurement and control		59
<i>W. Day</i>		
Introduction		59
Definitions and physical principles		60
Techniques and instrumentation		61
Materials and procedures		61
Control of humidity		63
Measurements of humidity		65
Practical considerations and applications		73

Chapter 5 The measurement of temperature	79
<i>C.J. Bell and D.A. Rose</i>	
Introduction	79
What is temperature?	79
Temperature scales	79
The measurement of temperature	80
Errors of measurement	81
Techniques and instruments	82
Mechanical thermometers	82
Electrical thermometry	84
Optical thermometry	88
Calibration	90
Case studies	92
1 Leaf temperature	92
2 Microclimate measurements	92
3 Air temperature – the effect of exposure	93
4 Animal core temperatures	94
5 Soil temperatures	94
6 Temperature integration	95
Summary	95
 Chapter 6 The measurement of wind speed	 101
<i>J. Grace</i>	
Introduction	101
Pressure probes	102
Pitot-tube	102
Pressure tube anemograph	103
Pressure-sphere	104
Sensors activated by drag	104
Cup anemometer	105
Propeller or vane anemometer	107
Pressure plate and thrust anemometer	107
Probes depending on convective heat loss	107
Hot-wire anemometer	107
Related techniques	110
Naphthalene – the basis for a mass transfer probe?	110
Anemometers measuring the flight time of a tracer	111
Pulsed wire anemometer	111
Vortex shedding anemometer	111
Sonic anemometer	112
Laser-Doppler anemometer	113
Semi-quantitative methods	113
Flags	113
Visualization	113
Calibration	114
Influence of masts	114

Chapter 7	The measurement and control of air and gas flow rates for the determination of gaseous exchanges of living organisms	123
	<i>S.P. Long and C.R. Ireland</i>	
	Introduction	123
	Flow rate measurement	123
	Mechanical methods	124
	Pressure difference methods	127
	Heat dissipation methods	128
	Flow meter calibration	130
	Soap-film meters	130
	Wet gas meters	131
	Flow control	133
	Critical flow constrictions	133
	Electronic flow rate control	133
	Conclusions	134
 Chapter 8	 Remote site recording	 139
	<i>F.I. Woodward</i>	
	Introduction	139
	The range of recorders	139
	Chart recorders	139
	Tape recorders	141
	Solid-state memories	142
	Integrators	142
	Printers	143
	Sampling	143
	Connections	148
	Recorder characteristics	150
	Data translation	153
	The future	154
 Chapter 9	 The effective use of microprocessors in a scientific environment	 157
	<i>C. Pinches</i>	
	Introduction	157
	System considerations	157
	System integration	158
	Modular systems	160
	Sub-system design	161
	Software design	163
	Software tools	164
	Computer languages	167

Chapter 10	Porometry	171
	<i>K.J. Parkinson</i>	
	Introduction	171
	Materials for construction of porometers	171
	Gaseous transfer system and units of measurement	173
	Types of porometers	176
	Measurements independent of water vapour fluxes	176
	Measurements dependent on water vapour fluxes	178
	Measurement of evaporation from animal epidermis	185
	Conclusions	186
Chapter 11	Instruments for measuring plant water potential and its components	193
	<i>G.S. Campbell</i>	
	Water potential and its components	193
	Water potentials in the plant and its environment	193
	The water content-water potential relation	194
	Measurement of tissue water potential with a pressure chamber	196
	Measurement of xylem potential with a pressure chamber	200
	Measurement of osmotic potential with a pressure chamber	200
	Measurement of matric potential with a pressure chamber	202
	Measurement of leaf water potential with thermocouple psychrometers	204
	Measurement of osmotic potential with a thermocouple psychrometer	207
	Measurement of low water potentials	209
	Direct measurement of turgor pressure	209
	Future development and needs	209
Chapter 12	Measuring plant growth and structure	215
	<i>P.V. Biscoe and K.W. Jaggard</i>	
	Introduction	215
	Sampling and errors	216
	Data interpretation	217
	Measurements of plant communities	219
	Destructive	219
	Non-destructive	220
	Measurement of plant organs	223
	Leaf growth	223
	Root growth	225
	Conclusions	226

Chapter 13 Instruments and instrumenters	229
<i>L.D. Incoll</i>	
Instruments	229
Instrumenters	231
Terminology	232
Units	234
Recording, calculating and reporting results	235

Index	239
