Introduction	
Enrichment of ecosystem theory.	
<i>M. Higashi and T. P. Burns</i>	1
Part I Perspectives on the network approach to ecosystems	39
1 Networks in ecology.	41
<i>R. Margalef</i>	
2 Formal agency in ecosystem development.	58
<i>R. E. Ulanowicz</i>	
3 Network thermodynamics: a unifying approach to dynamic nonlinear living systems.	71
<i>D. C. Mikulecky</i>	
4 Improving predictability in networks: system specification through hierarchy theory.	101
<i>T. F. H. Allen and R. V. O'Neill</i>	
Part II Network approaches to problems in ecosystems ecology	115
5 Network trophic dynamics: an emerging paradigm in ecosystems ecology.	117
<i>M. Higashi, B. C. Patten and T. P. Burns</i>	
6 Positive feedback and ecosystem organization.	155
<i>D. L. DeAngelis and W. M. Post</i>	
7 Structure, stability and succession of model competition systems.	179
<i>K. Kawasaki, H. Nakajima, N. Shigesada and E. Teramoto</i>	
8 Hierarchical evolution in ecological networks: environs and selection.	211
<i>T. P. Burns, B. C. Patten and M. Higashi</i>	

9	Control theory in the study of ecosystems: a summary view <i>B. Hannon and J. Bentsman</i>	240
10	Do economics-like principles predict ecosystem behavior under changing resource constraints? <i>R. Herendeen</i>	261
	Concluding remarks	
	Network ecology: indirect determination of the life-environment relationship in ecosystems. <i>B. C. Patten</i>	288
