<i>Preface</i>	page xi
<i>List of abbreviations</i>	xii
1. Role of the photosynthetic pigments	1
1.1 Introduction	1
1.2 Early work on photosynthetic pigments in algae	2
1.2.1 Lipid-soluble pigments	2
1.2.2 Biliproteins	5
1.3 Harvesting of light energy by photosynthetic pigments	6
1.3.1 Action spectra	6
1.4 Light-energy absorption and transfer	10
1.5 Physical distribution of the pigments in the thylakoid membrane	11
2. Extraction and separation of lipid-soluble pigments	19
2.1 Techniques for extracting lipid-soluble pigments from algae	19
2.1.1 Extracting solvents	20
2.1.2 Physical methods	24
2.2 Separation and purification	32
2.2.1 Saponification	33
2.2.2 Separation by partition	33
2.2.3 Chromatography	34
3. Chlorophylls and derivatives	65
3.1 Distribution and chemistry	65
3.1.1 Biosynthesis	65
3.1.2 Distribution within the divisions and classes of the algae	66
3.1.3 Chemical structure	85
3.1.4 Degradation products	85
3.1.5 Methods for preventing degradation during extraction	87

3.2	Purification	90
3.3	Physical properties	92
3.3.1	Absorption spectra	92
3.3.2	Fluorescence spectra	94
3.4	Methods of estimating chlorophylls	95
3.4.1	Direct estimations in extracts from algae	98
3.4.2	Chromatographic separation	105
3.4.3	Conclusions	110
4.	The carotenoids	112
4.1	Distribution and pathways of synthesis	112
4.1.1	Biosynthesis in algae	112
4.1.2	Distribution in the algal class	113
4.1.3	Distribution and pathways of synthesis in the algal classes	113
4.1.4	Comments on the pathways found in the algal classes	118
4.2	Structure	130
4.3	Degradation	130
4.3.1	Oxidation products	132
4.3.2	Isomers	133
4.4	Methods of preventing degradation	152
4.4.1	Acidity	154
4.4.2	Oxidation	154
4.4.3	Light	154
4.4.4	Heat	155
4.5	Physical properties	155
4.5.1	Absorption spectra	155
4.5.2	Absorption spectra of algal carotenoids in nine solvents	157
4.5.3	Chemical examination by spectroscopy	157
4.6	Estimation	158
4.6.1	By spectroscopy	159
4.6.2	By chromatography	160
4.7	Partition coefficients and relative polarities	164
5.	The biliproteins	166
5.1	Introduction	166
5.2	Biosynthesis	166

5.3	Distribution in the algal classes	168
5.4	Absorption and fluorescence-emission spectra	173
5.5	Structure	179
5.6	Factors affecting absorption spectra	180
5.6.1	Type and number of the chromophores	184
5.6.2	Conformation and environment of the chromophore within the subunit	188
5.6.3	Changes in the environment of the chromophore produced by aggregation of the monomers	190
5.7	Extraction and purification	192
5.8	Estimation of biliproteins and phycobilins	194
5.8.1	Biliproteins	194
5.8.2	Phycobilins	198
5.9	Phycobilisomes	199
5.9.1	Structure	200
5.9.2	Energy transfer	207
5.10	Floridorubin	210
6.	Pigments of the chlorophyll-protein complexes	212
6.1	Properties of the pigment-protein complexes	212
6.1.1	Photosystem I	212
6.1.2	Photosystem II	225
6.2	Separation and identification of the components of the pigment-protein complexes	225
6.3	Pigment-protein complexes found in the algal classes	226
6.3.1	Cyanophyceae	228
6.3.2	Prochlorophyceae	228
6.3.3	Rhodophyceae	228
6.3.4	Cryptophyceae	229
6.3.5	Dinophyceae	229
6.3.6	Synurophyceae	229
6.3.7	Tribophyceae	229
6.3.8	Eustigmatophyceae	230
6.3.9	Prymnesiophyceae	230
6.3.10	Bacillariophyceae	230
6.3.11	Phaeophyceae	230
6.3.12	Prasinophyceae	230
6.3.13	Chlorophyceae	231
6.4	Chlorophyll-protein oligomers	231

7. Photosynthetic pigments in relation to phylogeny and taxonomy of algae	235
7.1 Phylogeny	235
7.2 Algal phylogeny and the photosynthetic pigments	236
7.2.1 Value of the three types of pigment in determining phylogeny	236
7.3 Hypotheses for the evolution of Eukaryota	239
7.4 Evidence for the phylogeny of the algal classes	245
7.4.1 Rhodophyceae	245
7.4.2 Cryptophyceae	246
7.4.3 Dinophyceae	247
7.4.4 Chromophyta	247
7.4.5 Chlorophyta	249
7.5 Phylogenetic trees based on photosynthetic pigments	251
7.6 Value of photosynthetic pigments in taxonomy within classes	252
7.6.1 Chlorophylls	252
7.6.2 Carotenoids	253
7.6.3 Biliproteins	254
8. General summary	256
