<i>Preface</i>			
1	Introduction	1	
	1.1 The terrestrial environment	2	
	1.2 The nature of the evidence	3	
	1.2.1 Geological evidence	3	
	1.2.2 Evidence from present-day distribution	4	
	1.2.3 Evidence from comparative anatomy and physiology	4	
	1.2.4 Negative evidence	6	
2	Flatworms, nemertines and nematodes	7	
	2.1 The flatworms	7	
	2.2 The nemertines	9	
	2.3 The nematodes	12	
	2.4 Discussion	15	
3	Annelids	17	
	3.1 The polychaetes	18	
	3.1.1 The Nereidae	18	
	3.1.2 The Stygocapitellidae	19	
	3.1.3 Other families containing freshwater species	19	
	3.2 The oligochaetes	20	
	3.2.1 The Aeolosomatidae	21	
	3.2.2 Families transitional between aquatic and terrestrial habitats	21	
	3.2.3 The earthworms	23	
	3.3 The leeches	29	
	3.4 Discussion	30	
4	Molluscs	33	
	4.1 The prosobranchs	34	
	4.1.1 The Neritacea	35	
	4.1.2 The Architaenioglossa	38	
	4.1.3 The Littorinacea	42	
	4.1.4 The Rissoacea	46	
	4.1.5 The origins of terrestrial prosobranchs – summary	47	
	4.2 The pulmonates	48	
	4.2.1 The Basommatophora	48	
	4.2.2 The Systellommatophora	52	
	4.2.3 The Stylommatophora	53	
	4.3 Discussion: prosobranchs and pulmonates	61	
5	Crustaceans and the evolution of the arthropods	63	
	5.1 The evolution of the arthropods	63	
	5.2 Introduction to the Crustacea	65	
	5.3 The Malacostraca	67	
	5.3.1 The amphipods	67	
	5.3.2 The isopods	69	
	5.3.3 The decapods	80	
6	Chelicerates	106	
	6.1 The arachnids	108	
	6.1.1 Water balance and temperature control	109	
	6.1.2 Respiration and circulation	114	
	6.1.3 Haemolymph composition and nitrogenous excretion	117	
	6.1.4 Locomotion	119	
	6.1.5 Sensory systems and behaviour	120	
	6.2 Xiphosurans, eurypterids and pycnogonids	123	
	6.3 The origin of terrestrial chelicerates	126	
7	Onychophorans and myriapods	127	
	7.1 The onychophorans	128	
	7.2 The myriapods	132	
	7.2.1 The pauropods	132	
	7.2.2 The symphylans	132	
	7.2.3 The chilopods	133	
	7.2.4 The diplopods	138	
	7.3 The origins of onychophorans and myriapods	144	
8	Hexapods	146	
	8.1 The apterygotes	146	
	8.1.1 The Thysanura	146	
	8.1.2 The relationships of Thysanura, myriapods and pterygotes	151	
	8.1.3 The Diplura	152	
	8.1.4 The Protura	153	
	8.1.5 The Collembola	154	
	8.1.6 The 'Entognatha' and the origin of the hexapods	158	

8.2	The pterygotes	159	9.4.4	Permeability of egg membranes and shells	203
8.2.1	Insect habitats	159	9.4.5	Development of amniote eggs	204
8.2.2	Temperature regulation	161	9.4.6	Excretion by amniote eggs and adults	204
8.2.3	Respiration and associated water loss	163	9.4.7	Origins of amniote egg structures	206
8.2.4	The integument and associated water loss	165	9.4.8	Water loss from adult amniotes	206
8.2.5	The regulation of water balance by the Malpighian tubules and gut	167	9.4.9	Summary of amniote adaptations	207
8.2.6	Mechanisms of water uptake	170	10	Comparative discussion: the evolution of terrestrial ecosystems	208
8.2.7	Ion balance, volume control and haemolymph composition	173	10.1	Routes on to land and their consequences	208
8.2.8	Nitrogen excretion	175	10.1.1	Osmoregulation and water balance	208
8.2.9	Water balance and respiration in insect eggs	176	10.1.2	Respiration	215
8.2.10	Cryptobiosis	176	10.1.3	Nitrogenous excretion	217
8.2.11	The emergence of the pterygotes into the macroclimate	176	10.1.4	Reproduction	218
9	Vertebrates	179	10.1.5	Behaviour and sense organs	220
9.1	Chordate origins and early vertebrate evolution	179	10.2	Negative evidence: the groups without terrestrial members	220
9.2	Radiation in fresh water: the origin of lungs	181	10.3	The co-evolution of fauna and flora, and relationships with climate	221
9.2.1	The relevance of the lobe-finned fishes	181	10.3.1	The influence of plants on the development of terrestrial faunas	222
9.2.2	The biology of lungfish	183	10.3.2	The influence of climate	224
9.2.3	Air-breathing actinopterygians	187	10.4	The success of different animal taxa in a variety of terrestrial habitats	226
9.3	The emergence on to land: amphibian origins and adaptations	192	10.4.1	Abundance	229
9.3.1	Primitive amphibians: the labyrinthodonts	192	10.4.2	Biomass	229
9.3.2	Modern amphibians: the lissamphibians	194	10.4.3	Species numbers	229
9.4	The amniotes: emancipation from the water	201	10.5	The recolonisation of aquatic habitats	232
9.4.1	The origin of reptiles	202	10.5.1	Nemertines	233
9.4.2	The origin of cleidoic eggs	203	10.5.2	Myriapods and arachnids	233
9.4.3	Structure of the early stages of amniote eggs	203	10.5.3	Insects	233
			10.5.4	Molluscs	235
