<i>Preface to the third edition</i>	<i>page ix</i>
PART I THE UNDERWATER LIGHT FIELD	1
1 Concepts of hydrologic optics	3
1.1 Introduction	3
1.2 The nature of light	3
1.3 The properties defining the radiation field	6
1.4 The inherent optical properties	14
1.5 Apparent and quasi-inherent optical properties	21
1.6 Optical depth	24
1.7 Radiative transfer theory	24
2 Incident solar radiation	28
2.1 Solar radiation outside the atmosphere	28
2.2 Transmission of solar radiation through the Earth's atmosphere	30
2.3 Diurnal variation of solar irradiance	38
2.4 Variation of solar irradiance and insolation with latitude and time of year	42
2.5 Transmission across the air-water interface	44
3 Absorption of light within the aquatic medium	50
3.1 The absorption process	50
3.2 The measurement of light absorption	53
3.3 The major light-absorbing components of the aquatic system	61

3.4	Optical classification of natural waters	92
3.5	Contribution of the different components of the aquatic medium to absorption of PAR	95
4	Scattering of light within the aquatic medium	98
4.1	The scattering process	98
4.2	Measurement of scattering	104
4.3	The scattering properties of natural waters	116
4.4	The scattering properties of phytoplankton	128
5	Characterizing the underwater light field	133
5.1	Irradiance	133
5.2	Scalar irradiance	143
5.3	Spectral distribution of irradiance	144
5.4	Radiance distribution	147
5.5	Modelling the underwater light field	149
6	The nature of the underwater light field	153
6.1	Downward irradiance – monochromatic	153
6.2	Spectral distribution of downward irradiance	159
6.3	Downward irradiance – PAR	159
6.4	Upward irradiance and radiance	168
6.5	Scalar irradiance	178
6.6	Angular distribution of the underwater light field	181
6.7	Dependence of properties of the field on optical properties of the medium	188
6.8	Partial vertical attenuation coefficients	197
7	Remote sensing of the aquatic environment	199
7.1	The upward flux and its measurement	200
7.2	The emergent flux	215
7.3	Correction for atmospheric scattering and solar elevation	218
7.4	Relation between remotely sensed reflectance and the scattering/absorption ratio	225
7.5	Relation between remotely sensed reflectances and water composition	228

PART II PHOTOSYNTHESIS IN THE AQUATIC ENVIRONMENT	263
8 The photosynthetic apparatus of aquatic plants	265
8.1 Chloroplasts	265
8.2 Membranes and particles	268
8.3 Photosynthetic pigment composition	275
8.4 Reaction centres and energy transfer	298
8.5 The overall photosynthetic process	300
9 Light capture by aquatic plants	308
9.1 Absorption spectra of photosynthetic systems	308
9.2 The package effect	311
9.3 Effects of variation in cell/colony size and shape	314
9.4 Rate of light absorption by aquatic plants	319
9.5 Effect of aquatic plants on the underwater light field	325
10 Photosynthesis as a function of the incident light	330
10.1 Measurement of photosynthetic rate in aquatic ecosystems	330
10.2 Photosynthesis and light intensity	339
10.3 Efficiency of utilization of incident light energy	360
10.4 Photosynthesis and wavelength of incident light	380
11 Photosynthesis in the aquatic environment	388
11.1 Circulation and depth	388
11.2 Optical characteristics of the water	397
11.3 Other limiting factors	400
11.4 Temporal variation in photosynthesis	430
11.5 Photosynthetic yield per unit area	440
12 Ecological strategies	453
12.1 Aquatic plant distribution in relation to light quality	453
12.2 Ontogenetic adaptation – intensity	469
12.3 Ontogenetic adaptation – spectral quality	479
12.4 Ontogenetic adaptation – depth	488
12.5 Significance of ontogenetic adaptation of the photosynthetic system	503
12.6 Rapid adaptation of the photosynthetic system	514

12.7	The microphytobenthos	528
12.8	Highly productive aquatic ecosystems	532
	<i>References and author index</i>	539
	<i>Index to symbols</i>	626
	<i>Index to organisms</i>	628
	<i>Index to water bodies</i>	632
	<i>Subject index</i>	638

The colour plates appear between pages 212 and 213.
