

CONTENTS

Preface	page xi	3.6 Photorespiration	67
Abbreviations and units	xiii	3.7 Photosynthetic strategies	67
		3.8 Respiration	70
		3.9 Environmental factors and photosynthesis	70
1 The tropical environment and climate	1	3.10 Primary production	73
1.1 The tropics	2	3.11 Assessment of grassland primary production	74
1.2 Tropical and temperate environments	3	3.12 Effects of rainfall, grazing and fire on grass growth	75
1.3 Tropical climates	4	3.13 Primary production rates in terrestrial biomes	78
1.4 Global climate change	12	Summary	79
1.5 Biogeographical regions	18		
Summary	24		
2 Dry, hot deserts and environmental factors	26	4 Savanna and population dynamics	81
2.1 Tropical deserts	27	4.1 Fire and savanna vegetation	82
2.2 The Sahara Desert and arid zones of northern Africa	27	4.2 Savannas of the world	82
2.3 The Namib Desert	31	4.3 The Serengeti	87
2.4 Australian deserts	35	4.4 Savanna plants and heterogeneity	89
2.5 Environmental factors	39	4.5 Animal population dynamics in the Serengeti	91
2.6 Water	39	4.6 Herbivores and herbivory	93
2.7 Limiting factors and Liebig's law	42	4.7 Principles of population growth	96
2.8 Temperature	45	4.8 Factors determining population density	101
2.9 Salinity	46	4.9 Density-dependent mortality factors	104
2.10 Soils and nutrients	47	4.10 Competition theory and the competitive exclusion principle	109
2.11 Environmental factors and plant and animal distributions	51	4.11 Predation	111
2.12 Desertification or land degradation?	55	4.12 Density-independent mortality factors	121
Summary	56	4.13 Reproductive strategies and population growth	121
3 Grasslands and primary production	59	4.14 Population age structure and life tables	125
3.1 Grass structure and biology	60	4.15 Key factor analysis	132
3.2 Neotropical grasslands	61	4.16 Conservation of African wildlife	132
3.3 Light as an energy source	64		
3.4 Carbon dioxide uptake by plants	65		
3.5 Photosynthesis	66		

4.17 Ecosystem dynamics and ecological models	135
Summary	139

5 Lakes, energy flow and biogeochemical cycling 142

5.1 Thermal stratification	143
5.2 Pelagic zone production	161
5.3 Littoral zone producers and primary production	166
5.4 The catchment area concept	168
5.5 Aquatic consumers	170
5.6 The biota of tropical and temperate lakes: a comparison	172
5.7 Food chains and energy flow	174
5.8 Food chain energetics	175
5.9 Trophic levels	176
5.10 Limited length of food chains	178
5.11 Food chain efficiencies	181
5.12 Food web dynamics and trophic cascades	182
5.13 Biogeochemical cycles	184
5.14 Quantitative aspects of nutrient supply and cycling	190
5.15 Eutrophication	193
5.16 Aquatic resource management	199
Summary	201

6 Rivers, floodplains and estuaries: the river continuum and flood-pulse concepts 204

6.1 Nile River	205
6.2 Purari River	211
6.3 Amazon River	216
6.4 Ecological concepts	226
6.5 Estuaries	235
Summary	239

7 Wetlands and succession 241

7.1 Sudd communities of Lake Naivasha	243
7.2 Rooted emergent swamps of Lake Chilwa	244
7.3 Freshwater herbaceous wetlands: structure and function	245

7.4 Swamp forests	249
7.5 Wetland succession	251
7.6 Ecological succession	253
7.7 Community development and assembly	254
7.8 Wetland loss and conservation	255
Summary	257

8 Tropical rain forests and biodiversity 259

8.1 How many species exist?	260
8.2 Biogeography of rain forests	260
8.3 Vegetation structure of tropical rain forests	267
8.4 Phenology and reproduction of tropical forest trees	270
8.5 Life-form concept of plants	273
8.6 Rain-forest animals	273
8.7 Convergent evolution	276
8.8 Plant-animal interactions	277
8.9 Co-evolution	281
8.10 Productivity and nutrient cycling in forests	281
8.11 Micro-climates and resource acquisition	283
8.12 Biological diversity	285
8.13 Why are rain forests so diverse?	288
8.14 Latitudinal gradients and species diversity	289
8.15 Gap theory	293
8.16 Processes maintaining local diversity	296
8.17 Tropical deciduous forests and ecotones	300
8.18 Low-diversity tropical rain forests	300
8.19 Deforestation	301
8.20 Rain-forest conservation and restoration	304
8.21 Biodiversity conservation	309
Summary	312

9 Mountains, zonation and community gradients 315

9.1 Environmental factors and altitude	316
9.2 Zonation on tropical mountains	316
9.3 Vegetation zonation on Mount Wilhelm, Papua New Guinea	317
9.4 Zonation in the Andes	322

9.5	Plant and animal ecophysiology: examples from Mount Kenya	325	11.9	Coral reef management and conservation	386
9.6	Mountain zonation	330		Summary	393
9.7	Variation in plant and animal communities	330			
	Summary	332			
10	Mangroves, seagrasses and decomposition	334			
10.1	Mangrove biogeography	335	12	Islands, archipelagos, biogeography and evolutionary ecology	395
10.2	Mangroves of New Guinea	337	12.1	Krakatau	396
10.3	Ecological adaptations of mangroves	339	12.2	Dispersal	397
10.4	Mangrove animals	342	12.3	Colonisation and community assembly	401
10.5	Mangrove productivity	345	12.4	Island biogeography	402
10.6	Seagrasses	346	12.5	Natural selection and evolution	410
10.7	Coastal vegetation and organic matter export	347	12.6	The Galápagos Archipelago	411
10.8	Decomposition	349	12.7	Speciation	414
10.9	Decomposition rates and environmental factors	352	12.8	The Hawaiian Archipelago	420
10.10	Detritus food chains	353	12.9	Extinction	421
10.11	Decomposition in other tropical systems	353	12.10	Exotic species on islands	422
10.12	Coastal zone management	354	12.11	Community ecology and evolution	423
	Summary	355		Summary	425
11	Coral reefs and community ecology	358	13	Cities and human ecology	427
11.1	Coral reef communities	359	13.1	Tropical cities	428
11.2	Coral biology	361	13.2	Evolution of human societies	429
11.3	Coral reefs	369	13.3	World population growth	431
11.4	Coral reef algae	371	13.4	Food production	435
11.5	Coral reef animals	372	13.5	Industrialisation, natural resource use and pollution	444
11.6	Coral reef biogeography and biodiversity	375	13.6	Human population growth: consequences and solutions	446
11.7	Community ecology	380	13.7	Sustainable development	449
11.8	Coral reef communities and phase shifts	385	13.8	Conclusions	450
				Summary	450
				Glossary	452
				References	471
				Index	501
