

CONTENTS.

PART I.

GENERAL PHYSIOLOGY.

CHAPTER I.

ON SOME OF THE CONDITIONS AFFECTING THE LIFE OF PLANTS.

SECTION A. **Respiration.** 1. Respiration; production of CO_2 by germinating seeds or buds. 2. Absorption of CO_2 by potash. 3. Sachs' method. 4. Winkler-Hempel apparatus. 5. Timiriazeff's Eudiometer. 6, 7, 8. Intramolecular respiration. 9, 10. Rise of temperature during respiration. 11. Succulents . pp. 1—13.

SECTION B. **The effect of various temperatures: of certain poisons: and of electrical shock.** 12. Injurious temperature demonstrated on *Oxalis* leaf. 13. Do., injected leaf. 14. Do., beetroot. 15. Do., dry and soaked seeds. 16. Circulation of protoplasm, Sachs' hot-box. 17. Velten's method. 18. Circulation of protoplasm, effect of CO_2 . 19. Do., chloroform. 20. *Oxalis* leaf killed by chloroform. 21. Do. by phenol. 22. Do. by induced current. 23. Effect of induced current on circulating protoplasm pp. 14—20.

CHAPTER II.

ASSIMILATION OF CARBON.

SECTION A. Formation of starch. 24. Sachs' Iodine method. 25. Schimper's method. 26. Variegated leaves. 27. Disappearance of starch in darkness. 28. Effect of dull light. 29. Local effect. 30. Gardiner's experiment. 31. Rays of different refrangibility. 32. Terrestrial leaves under water. 33. Stomata and gaseous exchange. 34. Excess of CO_2 . 35. Plants deprived of CO_2 . 36. Gain in weight. 37. Translocation. 38. Assimilation of sugar. 39. Do., formaldehyde. 40. Leucoplasts pp. 21—34.

SECTION B. Evolution of oxygen. 41. Bubbles of gas. 42. Light of varying intensity. 43. Dependence on presence of CO_2 . 44. Temperature and gas evolution. 45. Chloroform. 46. Coloured lights. 47. Collection of gas evolved. 48. Engelmann's blood method. 49. Phosphorus method. 50. Gas analysis, Pfeffer's method. 51. Gas analysis, Winkler-Hempel apparatus. 52. Timiriazeff's Eudiometer. 53. Engelmann's bacterial method. 54. Diffusion of gas through cuticle pp. 35—49.

SECTION C. Reactions of chlorophyll and of some other pigments. 55. Separation by benzene, ether, olive oil. 56. Action of light. 57. Aeration and effect of light. 58. Action of acid. 59. Action of copper salts. 60. Stability of the copper compound. 61. Spectroscopic examination. 62. Anthocyan in Ricinus, &c. 63. Floridæ. 64. Brown sea-weeds pp. 50—53.

SECTION D. Production of chlorophyll, etiolation, sun- and shade-leaves. 65. Appearance of the green colour. 66. Etiolin and light. 67. Pinus. 68. Chlorophyll formation and temperature. 69, 70. Do. and oxygen. 71. Do. and iron salts. 72. Form of etiolated plants. 73. Sun- and shade-leaves.

pp. 54—57.

CHAPTER III.

FURTHER EXPERIMENTS ON NUTRITION.

SECTION A. Water-culture. 74. Method. 75. Potassium salts necessary. 76. Phosphoric acid necessary. 77. Experiments with Lemna. 78. Calcium oxalate formation. 79. Nitrate reaction pp. 58—67.

- SECTION B. Nutrition of Fungi and of Drosera.** 80. Method.
 81. Various cultures. 82. Puccinia. 83. Hanging-drop cultures.
 84. Germination of spores. 85. Drosera, digestion of white of egg.
 86. Drosera, benefit from feeding pp. 68—72.

- SECTION C. Functions of roots.** 87. De Saussure's experiment.
 88, 89, 89 A. Root pressure. 90. Moll's experiment. 91. Absorption
 by means of dead roots pp. 73—78.

CHAPTER IV.

TRANSPIRATION.

- SECTION A. Absorption of water.** 92. Potometer. 93. Kohl's
 method. 94. Effect of sunshine. 95. Effect of wind. 96. Effect
 of light. 97—100. Negative pressure. 101. Permeability of mem-
 branes. 102. Oozing of water from wood. 103. Permeability of
 splint-wood. 104. Recovery of flaccid shoot. 105. Emulsion ex-
 periment. 106. Injection with cocoa-butter. 107. Compression.
 108. Incisions. 109. Cross-cuts. 110. Do., course shown by
 eosin. 111. Air-pump and potometer. 112. Strasburger's air-
 pump experiment pp. 79—96.

- SECTION B. Loss of water.** 113. Loss of weight during transpi-
 ration. 114. Transpiration compared with evaporation from water.
 115. Loss compared with absorption. 116. Spring balance.
 pp. 97—101.

- SECTION C. Stomata, bloom, lenticels.** 117. Stomatal trans-
 piration. 118. Stipa-hygrometer. 118A. Stahl's cobalt method.
 118B. Stomata in withered leaves. 118C. Effect of salt on the
 stomata. 119. Stomata and intercellular spaces. 120. Leaf injected
 with water. 121. Frost effects. 122. Blocking of stomata with water.
 123. Movements of stomata. 124. Do. with induced current.
 125. Lenticels and intercellular spaces. 126. Bloom as affecting
 transpiration pp. 102—111.

CHAPTER V.

PHYSICAL AND MECHANICAL PROPERTIES.

- SECTION A. Imbibition, hygroscopic movements, polariscope,
 osmosis.** 127. Laminaria, microscopic observation. 128. Lami-
 naria, increase not uniform in all directions. 129. Imbibition of seeds,

temperature effect. 130. Imbibition; salt solution. 131. Stipa, action of. 132, 133. Stipa, temperature. 134. Stipa, salt solution. 135. Stipa, mechanism of movement. 136. Nobbe's experiment. 137. Variability in the swelling of seeds. 138. Rise of temperature accompanying imbibition. 139. Work done during imbibition. 140. Polariscope. 141. Polariscope, observations on strained glass rods. 142. Traube's artificial cell. 143. Slowness of diffusion. 144. Relation of membrane to diffusing fluid. 145. Absorption of methylene blue by living cell. . . . pp. 112—124.

SECTION B. **Turgor.** 146. Plasmolysis, microscopic observations. 147. Recovery after plasmolysis. 148. Osmotic strength of cell-sap in terms of KNO_3 . 149. Isotonic coefficient. 150. Do., microscopic method. 151. Hydrostatic pressure in turgescient tissue. 152. Pfeffer's gypsum method. . . . pp. 125—132.

SECTION C. **Tensions of tissues.** 153. Longitudinal tensions. 154. Extension of pith in water. 155. Changes in transverse dimensions of pith. 156. Tangential dimension. 157. Shortening of roots. 158. Imperfect elasticity of tissues. 159. Cyclometer. 160. Hofmeister's experiment. 161. Loss of rigidity. 162. Increase in length. 163. Splitting turgescient tissues. 164. Splitting a root. 165. Splitting a pulvinus. . . . pp. 133—141.

CHAPTER VI.

GROWTH.

SECTION A. **Experiments without special apparatus.** 166. Method. 167. Free oxygen necessary. 168. Respiration necessary. 169. Effect of salt solution. 170. Growth at various temperatures. . . . pp. 142—145.

SECTION B. **Distribution of growth.** 171. Distribution in roots. 172. In air-roots. 173. In stems. 174. Grand period, time observation. 175. Growth and plasmolytic shrinking pp. 146—148.

SECTION C. **Auxanometers.** 176. Methods. 177. Descent of the weight measured on a scale. 178. Micrometer screw. 179. Arc-indicator. 180. Microscope. 181. Self-recording auxanometer. 182. Do., simple form. 183, 184. Growth and temperature, microscopic method. 185. Growth and respiration, micro-

scopic method.	186.	Growth and temperature, auxanometer.
187. Growth and light, auxanometer.	188.	Growth and light, Phycomyces.
189. Growth and light, Sinapis.	190.	Periodicity, auxanometer
		pp. 149—182.

CHAPTER VII.

CURVATURES.

SECTION A. Geotropism.	191.	Region of growth and region of curvature, roots.
192. Do., stems.	193.	Subsequent changes in curvature.
194. Grass-haulms.	195.	Noll's experiment, grass-haulms.
196, 197. Geotropism and respiration.	198.	Johnson's experiment.
199. Pinot's experiment.	200.	Knight's experiment.
201. Sudden curvature.	202, 203.	After effect
		pp. 163—172.

SECTION B. Curvatures due to injury &c.	204.	Decapitated roots.
205. Decapitation prevents perception of stimulus.	205 A. Do., Pfeffer's experiment.	206.
Recovery after decapitation.	207.	Curvature due to injury.
208. Ciesielski's experiment.	209.	Drooping of leaves in frost
		pp. 173—179.

SECTION C. Heliotropism.	210.	Positive heliotropism.
211. After effect.	212.	Light of high refrangibility most effective.
213. Negative heliotropism.	214.	Struggle between the effects of light and gravitation.
215. Transmitted stimulus		pp. 180—183.

SECTION D. Diageotropism, diageotropism &c.	216.	Diageotropism.
217. The movements due to specific sensitiveness; klinostat.	217 A.	Exclusion of helio- and geotropism.
218. Rectipetality.	219.	Theory of klinostat, grass-haulms.
220. Do., Cucurbita.	221.	Diageotropism, roots.
222. Growth of secondary roots in light.	223.	Diageotropism, Narcissus.
224. Horizontal branches.	225.	Torsion of internodes.
226. Buds of the yew.	227.	Epinasty.
228. Epinasty and geotropism.	229.	Nutation of epicotyls
		pp. 184—199.

CHAPTER VIII.

FURTHER EXPERIMENTS ON MOVEMENT.

SECTION A. Stimulus of contact, chemical agency, moisture, changes in illumination and temperature.	230.	Tendrils, sensi-
--	------	------------------

tive to contact. 231. Tendrils, Pfeffer's contact experiment. 232. Mimosa, movements produced by stimulation. 233. Mimosa, temperature. 234. Mimosa, darkness. 235. Mimosa, continued stimulation. 236. Oxalis acetosella, sensitiveness. 237. Oxalis, Brücke's experiment. 238. Drosera, stimulated by meat. 239. Do., by inorganic matter. 240. Drosera stimulated by dilute solutions. 241. Drosera, inflection indirectly caused. 242. Berberis, irritable stamens. 243. Berberis, effect of chloroform. 244. Stigma of Mimulus. 245. Centaurea, irritable stamens. 246. Phycomyces, curvature towards iron. 247. Hydrotropism. 248. Movement of chloroplasts. 249. Chemotaxis, antherozoids. 249 A. Chemotaxis: bacteria. 249 B, C. Do., pollen tubes. 250. Opening and closing of tulip, temperature. 251. Tulip, sensitive to small change of temperature. 252. Crocus, mechanism of movement. 253. Light and darkness, daisy. 254. Light and darkness, Trifolium. 255. Nyctitropic movements, Trifolium. 256. Do., Mimosa, self-recorded. 257. Paraheliotropism, Averrhoa. pp. 200—226.

SECTION B. **Autonomous movements. Periodicity.** 258. Circumnutation. 259. Do., twining plants. 260. Autonomous movements, Trifolium. 261. Do., Averrhoa. 262. Do., Desmodium. 263. Periodicity, light and darkness, daisy. 264. Periodicity, temperature, daisy. 265. Contrast, daisy pp. 227—234.

PART II.

CHEMISTRY OF METABOLISM.

CHAPTER IX.

INTRODUCTION. SOLVENTS. METHODS OF EXTRACTION.
GENERAL NOTES ON APPARATUS AND MANIPULATION.

Introductory. Preparation of material to be examined. Preparation of extracts: non-nitrogenous plastic substances. Preparation of extracts: nitrogenous plastic substances. Filtration. Evaporation of solutions. Changes occurring in solutions on keeping pp. 237—248.

CHAPTER X.

PROTEIDS. AMIDES. AMMONIA. NITRATES, &c.

Literature. Practical classification of nitrogenous plastic substances. Qualitative examination for proteids insoluble in water, soluble in dilute alkali—for proteids soluble in water—for peptones and albumoses—for amides—for ammonia, nitrates, nitrites. Estimation of proteids—of peptones and albumoses. Estimation of amides. Estimation of ammonia, nitrates and nitrites. Experiments on nitrogenous metabolism. Qualitative examination of *Onobrychis sativa* for proteids &c. Comparison of amounts of proteids, peptones, amides in seeds of *Onobrychis* and in shoots of the same grown under various conditions. Comparison of amounts of ammonia, nitrates, nitrites in shoots of *Onobrychis* from plants variously treated . . . pp. 249—260.

CHAPTER XI.

OILS AND FATS. GLYCERINE.

Literature. Extraction of oils and fats. Qualitative examination of benzene extract. Reactions of glycerin. Quantitative examination. Determination of total oils and fats—of free fatty acids—of glycerin. Experiments. Determination of oils and fats in seeds of *Lepidium*—in seedlings of *Lepidium*, young and old . . . pp. 261—265.

CHAPTER XII.

TANNINS AND GLUCOSIDES.

Literature. Extraction of tannins and glucosides. Many different bodies included under heading tannin and glucoside. Qualitative tests for tannins. Qualitative tests for phloroglucin. Removal of tannins before examining for sugars. Determination of whether a tannin is a glucoside or not. Glucosides. Identification of salicin. Examination for certain sugars. Experiments. Testing extract of willow-bark for tannin, salicin, sugars. Estimation of certain sugars in young and old fruits of *Musa sapientum* . . . pp. 266—275.

CHAPTER XIII.

DEXTRINS AND SUGARS, GLUCOSES, CANE-SUGAR, MALTOSE, &c.

Literature. Soluble carbohydrates. Qualitative test for fermentable sugars. Estimation of fermentable sugars. Removal of dextrins. Tests for glucoses, cane-sugar, maltose, mannite, pentoses. Estimation of glucoses, cane-sugar, maltose. Calculation of results. Experiments on sugars. Testing leaves of *Tropæolum majus* for various sugars. Estimation of fermentable sugars in leaves and roots of *Beta vulgaris*. Estimation of various sugars in leaves of *Beta vulgaris* under different conditions.
pp. 276—289.

CHAPTER XIV.

STARCH. CELLULOSE.

Literature. Estimation of starch and cellulose. Experiments on starch. Estimation of starch in the potato by different processes—in leaves of *Acer pseudo-platanus* under different conditions. In grains of wheat before and after germination . . . pp. 290—294.

CHAPTER XV.

ORGANIC ACIDS AND SALTS.

Literature of organic acids. Qualitative examination for organic acids. Determination of 'acidity' of extracts. Literature of inorganic salts. Preparation of ash of tissues. The constituents of the ash. Estimation of chlorine—phosphoric acid—alkalies—in ash. Estimation of calcium oxalate in tissues. Experiments on organic acids. Comparison of acidity of juice from old and young rhubarb petioles—of acidity and amounts of sugars in juice from ripe and unripe apples. Experiments on inorganic salts. Weights of ash from normal and etiolated leaves. Estimation of phosphoric acid and alkalies in leaves and grains of barley—of calcium oxalate in young and old leaves of *Sempervivum tectorum* . . . pp. 295—302.

CHAPTER XVI.

UNORGANISED FERMENTS. (ENZYMES.)

Literature. Extraction of enzymes. Comparison of activity of extracts. Experiments on diastatic ferments. Preparation of solid diastase. Influence of filtration on diastatic power of extracts. Comparison of diastatic power of malt and ungerminated barley—of leaves of *Pisum sativum* and *Trifolium pratense*. Experiments on invertase and glycose. Decomposition of a glucoside (salicin) by an enzyme (synaptase) from another plant pp. 303—311.

CHAPTER XVII.

GENERAL EXPERIMENTS.

The increase in weight of growing *Spirogyra*. The influence of inorganic salts on the formation of starch. The changes in the reserve materials of an oily seed during germination under different conditions.

pp. 312—313.

APPENDIX I.

Notes on the results likely to be obtained in experiments on metabolism pp. 314—322.

APPENDIX II.

List of reagents and material required for experiments on metabolism pp. 323—326.
