I GIANT CELLS AS EXPERIMENTAL MATERIAL	1
Algae with giant cells	1
Taxonomy	1
The Charophyta	1
The Bryopsidophyceae	5
The Chlorococcales	6
The Ceramiales	6
Ultrastructural features	6
The culture of giant-celled algae	9
Charophyta	9
Bryopsidophyceae	10
Chlorococcales	10
Cell operations	11
Electrical measurements	13
Electrical techniques	15
2 TWO HUNDRED YEARS: EARLY PHYSIOLOGY	19
3 WATER RELATIONS	34
Introduction	34
Osmotic potential of the vacuolar sap	35
Transcellular osmosis	37
Osmotic flow during perfusion	39
Self-diffusion of water	41
4 PERMEABILITY TO NONELECTROLYTES	44
Introduction	44
The work of the Finnish school	44
Calculation of permeability coefficients	45
Correlation with partition coefficients and molecular weights	46
Deviations from the main permeability sequence	48
Temperature coefficients for nonelectrolyte permeation	48
The permeability of the plasmalemma and tonoplast to nonelectrolytes	49
Permeability to alcohols, and corrections for extra-protoplast resistance	50
The reflection coefficient	52

5	COMPARTMENTS AND IONIC CONCENTRATIONS	56
	Introduction	56
	The cell wall	56
	The plasmalemma	60
	The tonoplast	60
	Studies of the ionic content of cells	61
	Vacuolar sap	61
	The cytoplasm	66
6	IONIC FLUXES AND KINETIC MODELS	69
	Introduction	69
	Plant cells and models	70
	Fluxes across the plasmalemma and tonoplast	75
	The kinetics of chloride movement in <i>Nitella</i> and <i>Chara</i>	75
	The early transfer to the vacuole	75
	The distribution of the fraction reaching the vacuole at short times	81
7	ELECTRICAL PROPERTIES OF MEMBRANES	84
	Potential differences in giant algal cells	84
	Ion permeability ratios inferred from p.d.'s	86
	Potential difference across the tonoplast	91
	Electric conductances	92
	Fluxes and conductances	96
	Hydrogen ions	99
	Effects of light	101
	Short-term effects of light, and photosynthesis	101
	Long-term effects of light on p.d. and conductance	105
	Response to sinusoidally-varied intensity	105
	Permeability modifiers	105
	Temperature	106
	Electro-osmosis	108
	The capacitance of membranes	110
8	ACTION POTENTIALS IN CHAROPHYTE CELLS	111
	Introduction	111
	Features of the action potential	111
	Factors affecting the AP	113
	The chloride hypothesis	114
	Models for the action potential	116
	Changes in the cytoplasm	118
	Conduction of the action potential	119
9	STUDIES OF ACTIVE TRANSPORT - CATIONS	120
	The nature of active transport	120
	Na ⁺ /K ⁺ linked transport	126
	Cation transport linked to that of chloride	127
	Energy sources for K ⁺ /Na ⁺ transport	128
	Apparently unlinked K ⁺ transport	133

10 STUDIES OF ACTIVE TRANSPORT - ANIONS	136
Chloride: rates of influx in light and dark	136
Chloride influx and photosynthesis	137
Chloride influx and net electron transport	139
Photophosphorylation and chloride transport	140
Chloride influx as a secondary active transport	141
Other halide fluxes	144
Uptake and distribution of phosphate	145
Sulphate	148
11 THE TRANSPORT AND USE OF CARBON DIOXIDE AND BICARBONATE IONS	151
Introduction	151
Rates of carbon fixation	151
Carbon dioxide only, or bicarbonate as well?	152
The active transport of bicarbonate	154
Calcium carbonate deposits and banding	157
Location of the products of carbon fixation	158
Substances affecting fixation	159
12 PROTOPLASMIC STREAMING	162
Streaming in the charophytes	162
The motive force	164
The effect of temperature on streaming rate	166
Cessation of streaming produced by an action potential	168
Energy and its transduction	169
Mechanism	172
Streaming in <i>Acetabularia</i>	173
Streaming and teleology	174
APPENDIXES	176
A. Notes on equations and their derivation	176
B. Calculations about energy	178
<i>References</i>	181
<i>Index</i>	199
