<i>Preface</i>	page xi
<i>Acknowledgments</i>	xiii
1 A brief history of cave biology	1
1.1 Conceptual issues	1
1.2 Pre-Darwinian thought (before 1859)	3
1.3 Darwinism and American neo-Lamarckism (1859–1919)	21
1.4 European selectionism and the death of the controversies (1880–1921)	37
1.5 Biospeleological ideas in France and elsewhere in continental Europe (1809–1950)	41
1.6 The impact of the modern synthesis (1936–47)	52
1.7 The roots of current intellectual inertia	60
2 Cave biodiversity	62
2.1 Bacteria (Archaeobacteria and Eubacteria)	62
2.2 Algae (including Cyanobacteria)	67
2.3 Fungi	69
2.4 Lichens	73
2.5 Plants (liverworts, mosses, ferns, and seed plants)	73
2.6 Protozoans	76
2.7 Porifera (sponges)	76
2.8 Cnidarians (anemones, jellyfish)	80
2.9 Platyhelminthes (flatworms)	81
2.10 Nemertina (ribbon worms)	83
2.11 Gastrotricha (gastrotrichs)	83
2.12 Kinorhyncha (kinorhynchs)	84
2.13 Nematoda (roundworms)	84
2.14 Annelida (segmented worms)	85
2.15 Mollusca (mollusks)	86

2.16	Brachiopoda (lamp shells)	89
2.17	Bryozoa (moss animals)	89
2.18	Crustacea (crustaceans)	90
2.19	Chelicerata (arachnids and their relatives)	96
2.20	Onychophora (velvet worms)	104
2.21	Tardigrada (water bears)	104
2.22	Myriapoda (millipedes and centipedes)	105
2.23	Insecta (insects)	109
2.24	Pisces (fishes)	118
2.25	Amphibians (salamanders, frogs, toads)	120
2.26	Reptilia (reptiles)	122
2.27	Aves (birds)	123
2.28	Mammalia (mammals)	125
2.29	Conclusions	129
3	The evolutionary biology of cave organisms	130
3.1	What is a hypogean/cave organism?	130
3.2	Character concept in biospeleology	132
3.3	Hypogean colonization	139
3.4	The myth of preadaptation	145
3.5	A case for phenotypic plasticity	150
3.6	Conclusions	156
4	The ecology of cave organisms	159
4.1	Introduction	159
4.2	Diversity and distribution	159
4.3	Cave ecosystem structure	164
4.4	Spatial organization	166
4.5	Trophic structure	169
4.6	Is there succession in caves?	175
4.7	Interactions of cave habitats with the epigean environment	177
4.8	Caves as record keepers of climate change	180
5	Cave conservation and management	182
5.1	Introduction	182
5.2	Effects on geomorphology	187
5.3	Effects on the atmosphere of caves	195
5.4	Hydrology	197
5.5	Effects on the biota	199
5.6	Cultural heritage	206

The colour plates are between pages 178 and 179.

5.7	Climate change	206
5.8	Legal protection	207
5.9	Conclusions	208
6	Epilogue	209
6.1	The role played by behavior in the evolution of cave organisms	209
6.2	Integrative molecular genetics	209
6.3	Trophic structure of caves	211
6.4	Other biological questions	211
6.5	Concluding questions for historians, philosophers, and sociologists of science	214
<i>Appendix 1 Glossary of terms frequently used in biospeleology</i>		216
