Preface to the third edition

page xi

Chapter 1	Introduction	2
	Chapter summary	2
1.1	What is genetic engineering?	3
1.2	Laying the foundations	5
1.3	First steps	6
1.4	What's in store?	7
	Concept map	10

Part I | The basis of genetic engineering

Chapter 2	Introducing molecular biology	12
	Chapter summary	12
2.1	The way that living systems are organised	13
2.2	The flow of genetic information	15
2.3	The structure of DNA and RNA	16
2.4	Gene organisation	19
	2.4.1 The anatomy of a gene	20
	2.4.2 Gene structure in prokaryotes	21
	2.4.3 Gene structure in eukaryotes	22
2.5	Gene expression	23
	2.5.1 From genes to proteins	24
	2.5.2 Transcription and translation	24
	2.5.3 Regulation of gene expression	25
2.6	Genes and genomes	27
	2.6.1 Genome size and complexity	28
	2.6.2 Genome organisation	29
	2.6.3 The transcriptome and proteome	30
	Concept map	31

Chapter 3	Working with nucleic acids	32
	Chapter summary	32
3.1	Laboratory requirements	33
3.2	Isolation of DNA and RNA	34
3.3	Handling and quantification of nucleic acids	35
3.4	Labelling nucleic acids	37
	3.4.1 Types of label – radioactive or not?	37
	3.4.2 End labelling	38
	3.4.3 Nick translation	38
	3.4.4 Labelling by primer extension	39
3.5	Nucleic acid hybridisation	39

3.6	Gel electrophoresis	40
3.7	DNA sequencing	41
3.7.1	Principles of DNA sequencing	42
3.7.2	Preparation of DNA fragments	43
3.7.3	Maxam–Gilbert (chemical) sequencing	44
3.7.4	Sanger–Coulson (dideoxy or enzymatic) sequencing	45
3.7.5	Electrophoresis and reading of sequences	47
3.7.6	Automation of DNA sequencing	48
	Concept map	49

Chapter 4 | The tools of the trade 50

	Chapter summary	50
4.1	Restriction enzymes – cutting DNA	51
4.1.1	Type II restriction endonucleases	52
4.1.2	Use of restriction endonucleases	53
4.1.3	Restriction mapping	55
4.2	DNA modifying enzymes	55
4.2.1	Nucleases	56
4.2.2	Polymerases	57
4.2.3	Enzymes that modify the ends of DNA molecules	58
4.3	DNA ligase – joining DNA molecules	58
	Concept map	60

Part II | The methodology of gene manipulation

Chapter 5	Host cells and vectors	62
	Chapter summary	62
5.1	Host cell types	64
5.1.1	Prokaryotic hosts	64
5.1.2	Eukaryotic hosts	65
5.2	Plasmid vectors for use in <i>E. coli</i>	66
5.2.1	What are plasmids?	66
5.2.2	Basic cloning plasmids	67
5.2.3	Slightly more exotic plasmid vectors	69
5.3	Bacteriophage vectors for use in <i>E. coli</i>	70
5.3.1	What are bacteriophages?	71
5.3.2	Vectors based on bacteriophage λ	75
5.3.3	Vectors based on bacteriophage M13	78
5.4	Other vectors	79
5.4.1	Hybrid plasmid/phage vectors	80
5.4.2	Vectors for use in eukaryotic cells	80
5.4.3	Artificial chromosomes	83
5.5	Getting DNA into cells	84
5.5.1	Transformation and transfection	84
5.5.2	Packaging phage DNA <i>in vitro</i>	85
5.5.3	Alternative DNA delivery methods	86
	Concept map	89

Chapter 6	Cloning strategies	90
	Chapter summary	90
6.1	Which approach is best?	91
6.2	Cloning from mRNA	93
6.2.1	Synthesis of cDNA	94
6.2.2	Cloning cDNA in plasmid vectors	97
6.2.3	Cloning cDNA in bacteriophage vectors	99
6.3	Cloning from genomic DNA	101
6.3.1	Genomic libraries	102
6.3.2	Preparation of DNA fragments for cloning	104
6.3.3	Ligation, packaging, and amplification of libraries	105
6.4	Advanced cloning strategies	108
6.4.1	Synthesis and cloning of cDNA	108
6.4.2	Expression of cloned DNA molecules	110
6.4.3	Cloning large DNA fragments in BAC and YAC vectors	113
	Concept map	115
Chapter 7	The polymerase chain reaction	116
	Chapter summary	116
7.1	History of the PCR	117
7.2	The methodology of the PCR	120
7.2.1	The essential features of the PCR	120
7.2.2	The design of primers for PCR	122
7.2.3	DNA polymerases for PCR	124
7.3	More exotic PCR techniques	125
7.3.1	PCR using mRNA templates	125
7.3.2	Nested PCR	126
7.3.3	Inverse PCR	127
7.3.4	RAPD and several other acronyms	127
7.4	Processing of PCR products	128
7.5	Applications of the PCR	130
	Concept map	131
Chapter 8	Selection, screening, and analysis of recombinants	132
	Chapter summary	132
8.1	Genetic selection and screening methods	134
8.1.1	The use of chromogenic substrates	134
8.1.2	Insertional inactivation	135
8.1.3	Complementation of defined mutations	137
8.1.4	Other genetic selection methods	137
8.2	Screening using nucleic acid hybridisation	138
8.2.1	Nucleic acid probes	138
8.2.2	Screening clone banks	140
8.3	Use of the PCR in screening protocols	142
8.4	Immunological screening for expressed genes	144

8.5	Analysis of cloned genes	144
8.5.1	Characterisation based on mRNA translation <i>in vitro</i>	144
8.5.2	Restriction mapping	146
8.5.3	Blotting techniques	147
8.5.4	DNA sequencing	149
	Concept map	151

Chapter 9	Bioinformatics	152
	Chapter summary	152
9.1	What is bioinformatics?	153
9.2	The role of the computer	154
9.3	Biological data sets	156
9.3.1	Generation and organisation of information	157
9.3.2	Nucleic acid databases	157
9.3.3	Protein databases	160
9.4	Using bioinformatics as a tool	161
9.4.1	The impact of the Internet and the World Wide Web	162
9.4.2	Avoiding the 'GIGO' effect – real experiments	163
9.4.3	Avoiding the test tube – computational experimentation	164
9.4.4	Presentation of database information	164
	Concept map	167

Part III Genetic engineering in action

Chapter 10	Understanding genes, genomes, and 'otheromes'	170
	Chapter summary	170
10.1	Analysis of gene structure and function	171
10.1.1	A closer look at sequences	172
10.1.2	Finding important regions of genes	172
10.1.3	Investigating gene expression	174
10.2	From genes to genomes	175
10.2.1	Gene expression in a genome context	176
10.2.2	Analysing genomes	178
10.2.3	Mapping genomes	180
10.3	Genome sequencing	181
10.3.1	Sequencing technology	182
10.3.2	Genome projects	183
10.4	The Human Genome Project	186
10.4.1	Whose genome, and how many genes does it contain?	188
10.4.2	Genetic and physical maps of the human genome	188
10.4.3	Deriving and assembling the sequence	190
10.4.4	Presentation and interrogation of the sequence	192
10.5	'Otheromes'	193
10.5.1	The transcriptome	194
10.5.2	The proteome	195
10.5.3	Metabolomes and interactomes	197

10.6 Life in the post-genomic era	198
Concept map	201
Chapter 11 Genetic engineering and biotechnology	202
Chapter summary	202
11.1 Making proteins	204
11.1.1 Native and fusion proteins	204
11.1.2 Yeast expression systems	206
11.1.3 The baculovirus expression system	207
11.1.4 Mammalian cell lines	208
11.2 Protein engineering	208
11.2.1 Rational design	208
11.2.2 Directed evolution	211
11.3 From laboratory to production plant	211
11.3.1 Thinking big – the biotechnology industry	212
11.3.2 Production systems	214
11.3.3 Scale-up considerations	215
11.3.4 Downstream processing	215
11.4 Examples of biotechnological applications of rDNA technology	216
11.4.1 Production of enzymes	216
11.4.2 The BST story	218
11.4.3 Therapeutic products for use in human healthcare	220
Concept map	225
Chapter 12 Medical and forensic applications of gene manipulation	226
Chapter summary	226
12.1 Diagnosis and characterisation of medical conditions	227
12.1.1 Diagnosis of infection	228
12.1.2 Patterns of inheritance	228
12.1.3 Genetically based disease conditions	230
12.2 Treatment using rDNA technology – gene therapy	238
12.2.1 Getting transgenes into patients	239
12.2.2 Gene therapy for adenosine deaminase deficiency	241
12.2.3 Gene therapy for cystic fibrosis	242
12.2.4 What does the future hold for gene therapy?	244
12.3 RNA interference – a recent discovery with great potential	244
12.3.1 What is RNAi?	245
12.3.2 Using RNAi as a tool for studying gene expression	245
12.3.3 RNAi as a potential therapy	247
12.4 DNA profiling	248
12.4.1 The history of ‘genetic fingerprinting’	248
12.4.2 DNA profiling and the law	250
12.4.3 Mysteries of the past revealed by genetic detectives	252
Concept map	255

Chapter 13	Transgenic plants and animals	256
	Chapter summary	256
13.1	Transgenic plants	257
13.1.1	Why transgenic plants?	258
13.1.2	Ti plasmids as vectors for plant cells	258
13.1.3	Making transgenic plants	261
13.1.4	Putting the technology to work	262
13.2	Transgenic animals	269
13.2.1	Why transgenic animals?	270
13.2.2	Producing transgenic animals	270
13.2.3	Applications of transgenic animal technology	271
	Concept map	277
Chapter 14	The other sort of cloning	278
	Chapter summary	278
14.1	Early thoughts and experiments	279
14.1.1	First steps towards cloning	280
14.1.2	Nuclear totipotency	281
14.2	Frogs and toads and carrots	283
14.3	A famous sheep – the breakthrough achieved	285
14.4	Beyond Dolly	287
	Concept map	289
Chapter 15	Brave new world or genetic nightmare?	291
15.1	Is science ethically and morally neutral?	291
15.2	Elements of the ethics debate	292
15.2.1	The role of the scientist	294
15.2.2	The role of society	294
15.3	Does Frankenstein's monster live inside Pandora's box?	295
	<i>Suggestions for further reading</i>	297
	<i>Using the World Wide Web</i>	299
	<i>Glossary</i>	303
	<i>Index</i>	327
