Preface	page ix
---------	---------

Chapter 1 Introduction 1

What is a plant?	1
How do plant fragments get into the fossil record?	2
Types of plant fossil	3
Where are plant fossils found?	7
Bias in the fossil record	10
Why do we study plant fossils?	12
Recommended reading	13

Chapter 2 Highlights of palaeobotanical study 14

The beginnings of palaeobotany	14
The importance of coal	16
Anatomical studies	20
Coal balls	21
Coal petrology and palynology	23
The <i>Glossopteris</i> flora and continental drift	25
Early land plants	28
The age of cycads	29
Flowering plants	33
The future for palaeobotany	35
Recommended reading	37

Chapter 3 Studying plant fossils 38

Morphology of adpressions	38
Macrophotography	38
Transfers	39
Cuticles and epidermal structures	40
Extracting <i>in situ</i> pollen and spores	41
Dispersed pollen and spores	42
Three-dimensionally preserved plant fossils	42
Prepared casts	42
Sectioning anatomically preserved fossils	44
Reconstructing whole fossil plants	46
Naming plant fossils	46
Phylogenetic analysis	49
Biostratigraphy and palaeobiogeography	49
Curation	52
Site conservation	52
Recommended reading	54

Chapter 4	Early land plants	55
	Alternating generations	55
	Adapting to life on land	57
	Cryptospores and the earliest land plants	59
	The first vascular plants	59
	The Rhynie Chert flora	63
	Zosterophylls	64
	Trimerophytes	66
	Progymnosperms	67
	Recommended reading	71
Chapter 5	Lycophytes	72
	The earliest herbaceous lycophytes	72
	The beginnings of modern herbaceous lycophytes	77
	Increase in size and arborescence	79
	Cuticles and paper coal	85
	Rooting structures	86
	Reproduction	88
	After the giants	90
	Recommended reading	92
Chapter 6	Sphenophytes	93
	Origin and systematic position of the sphenophytes	93
	Pseudoborniales	94
	Sphenophyllales	96
	Archaeocalamitaceae	97
	Calamostachyaceae	99
	Gondwana sphenophytes	104
	Modern sphenophytes	104
	Recommended reading	105
Chapter 7	Ferns	106
	The first ferns	109
	Modern ferns	109
	Marattiales	110
	Other Late Palaeozoic ferns	113
	Ophioglossales	114
	Filicalean ferns	115
	Osmundaceae	115
	Schizaeaceae	120
	Gleicheniaceae	121
	Matoniaceae	122
	Dipteridaceae	122
	Dicksoniaceae and Cyathaceae	125

Polypodiaceous ferns	127
Tempskya	130
Heterosporous ferns	131
Recommended reading	134
Chapter 8 Early gymnosperms	135
What are ovules and seeds?	135
Gymnosperm reproduction	136
What plants did gymnosperms evolve from?	137
The pteridosperms	138
Lyginopteridales	139
Medullosales	142
Callistophytales	147
Peltasperms	149
Glossopterids	150
Cordaitea	153
Recommended reading	156
Chapter 9 Modern gymnosperms	157
Early conifers	157
Modern conifers	163
Ginkgoales	165
Cycads	166
Bennettitales	172
Caytoniales	174
Other gymnosperm groups	175
Gnetales	175
Recommended reading	177
Chapter 10 Angiosperms	178
What makes an angiosperm?	178
Wood	180
Ancestors of the angiosperms	181
The earliest angiosperms	184
Cretaceous angiosperms	186
Wind pollinated angiosperms	192
The rise of the monocotyledons	192
Cenozoic angiosperms	195
Recommended reading	202
Chapter 11 The history of land vegetation	203
Silurian Period (416–443 Ma)	203
Devonian Period (359–416 Ma)	203
Carboniferous Period (299–359 Ma)	204
Permian Period (251–299 Ma)	208
Permian/Triassic (P/T) Extinction Event	209
