1 Introduction	1
1.1 Concepts from epidemiology	5
1.2 Concepts from community ecology	9
1.3 Parasites	12
1.4 Aims of this book	17
2 Parasites and competitors	20
2.1 Introduction	20
2.1.1 Parasitism in modules of competition	21
2.2 One-host-one-parasite systems	22
2.2.1 Population dynamics	23
2.2.2 Competitive release	30
2.3 Apparent competition	32
2.3.1 Baseline theory	32
2.3.2 Implications for biological control	37
2.3.3 Empirical evidence for apparent competition	39
2.4 Parasite-mediated competition	49
2.4.1 Specialist parasite-mediated competition	49
2.4.2 Shared parasite-mediated competition	50
2.5 Parasite-modified competition	56
2.6 Examples from conservation and management	59
2.6.1 Red squirrels, grey squirrels and poxvirus	59
2.6.2 Grey partridge, pheasants and nematodes	63
2.6.3 White-tailed deer, moose and brainworm	66
2.6.4 Red grouse, deer, mountain hare, sheep and louping ill virus	68

2.7	Competition between parasites	72
2.7.1	Competition for resources	77
2.7.2	Apparent and host-mediated competition	78
2.7.3	Coinfections and trait-mediated indirect effects	81
2.8	Conclusions	86
3	Parasites and predators	90
3.1	Introduction	90
3.1.1	Overview of predation modules	90
3.2	Parasites of prey with specialist predators	92
3.2.1	Baseline theory	92
3.2.2	Empirical examples	100
3.3	Parasites of prey with generalist predators	104
3.3.1	Baseline theory	104
3.3.2	Empirical examples	107
3.3.3	Evolutionary dynamics and predation	115
3.4	Parasites of predators	118
3.4.1	Baseline theory	118
3.4.2	Empirical examples	119
3.5	Parasites of predators and prey	123
3.5.1	Patterns and evolution of manipulation and trophic transmission	124
3.5.2	Theoretical impacts on populations and communities	126
3.6	Applications: predator control and harvesting	129
3.6.1	Do predators keep the herds healthy?	129
3.6.2	Biological control	133
3.6.3	Harvesting infected populations	135
3.7	Conclusions	138
4	Parasites and intraguild predation	141
4.1	Introduction	141
4.1.1	Parasitism and IGP	142
4.1.2	Predictions from basic IGP theory	143
4.2	Ecological significance of IGP	145
4.3	IGP as a unifying framework for competition and predation	149
4.4	Parasites intrinsic to IGP	151
4.4.1	IGP in trophic transmission	152
4.4.2	Parasites and IGP in biological control	155

4.4.3	Biological control scenarios with IGP	156
4.5	Parasites extrinsic to IGP	164
4.5.1	Parasite-modified IGP	165
4.5.2	The potential for parasitism to interact with IGP	168
4.6	Models of parasitism extrinsic to IGP	169
4.7	IGP and the evolution of host-parasite relationships	171
4.8	Conclusions	173
5	Plant pathogens and parasitic plants	176
5.1	Introduction	176
5.1.1	Differences between animal and plant-parasite systems	177
5.1.2	Parasites of plants	179
5.2	Soil-borne pathogens	182
5.2.1	The Janzen-Connell effect	183
5.2.2	Plant-soil feed back	186
5.2.3	Pathogen-modified and apparent competition	190
5.3	Plant defence strategies	194
5.3.1	Chemical signalling pathways	194
5.3.2	Multiple enemies: positive and negative cross-talk	196
5.3.3	Signalling and manipulation	200
5.3.4	Above- and below-ground interactions	203
5.4	Parasitic plants	205
5.4.1	Dodder (<i>Cuscuta</i>)	208
5.4.2	Mistletoe (<i>Santalales</i>)	210
5.4.3	Broomrape (<i>Orobanchaceae</i>)	213
5.5	Endophytes	217
5.5.1	Endophyte effects on communities	217
5.5.2	Endophyte interactions with plant parasites and mutualists	221
5.6	Conclusions	222
6	Parasites and invasions	224
6.1	Introduction	224
6.2	Parasite introduction and acquisition	226
6.3	Loss of parasites by invaders: enemy release	229
6.3.1	Community studies of parasitism in invasive versus indigenous species	231

6.3.2	Biogeographical studies of parasitism in the native versus invasive range	234
6.3.3	Enemy release from vertically transmitted parasites	240
6.4	Invasions and host-parasite co-evolution	244
6.4.1	Local adaptation	244
6.4.2	Evolution of increased competitive ability	245
6.4.3	Plant-soil feed back	246
6.5	The impact of parasitism on biological invasions	248
6.5.1	Parasite dilution by invading hosts	248
6.5.2	Invading hosts as infection reservoirs	249
6.5.3	Native hosts as infection reservoirs	256
6.5.4	Native-invader interactions mediated by parasites	259
6.6	Conclusions	263
7	Ecosystem parasitology	265
7.1	Introduction	265
7.2	Trophic cascades	267
7.2.1	Density-mediated trophic cascades	270
7.2.2	Trait-mediated trophic cascades	273
7.3	Parasite dynamics in multi-host communities	274
7.3.1	Baseline model: parasite establishment in multiple host species	275
7.3.2	Reservoir versus dilution and host competence	277
7.3.3	Lyme disease risk, dilution and reservoir hosts	279
7.4	Biodiversity and disease	283
7.4.1	Determinants of disease spread	283
7.4.2	Transmission models and biodiversity relationships	284
7.5	Parasites in the food web	286
7.5.1	Functional role and interaction strength	287
7.5.2	Parasitism and food web topology	291
7.5.3	Implications for community stability	298
7.6	Bioenergetic implications of parasitism	301
7.6.1	Parasite biomass	301
7.6.2	Parasite productivity	302
7.7	Ecosystem engineering	304
7.8	Ecosystem health	308

7.8.1	Integrating population and community approaches to the study of ecosystems	308
7.8.2	Are parasites indicators of healthy ecosystems?	311
7.9	Evolutionary considerations	316
7.10	Conclusions	318
8	Emerging diseases in humans and wildlife	320
8.1	Introduction	320
8.1.1	Emerging approaches to the problem of EIDs	321
8.1.2	What are the problems caused by EIDs?	321
8.2	The process of disease emergence	323
8.2.1	Spillover	324
8.2.2	Persistence	326
8.2.3	Pandemic emergence	328
8.2.4	Heterogeneity in R_0 : superspreaders and their effect on disease dynamics	333
8.3	The evolution of emergence	336
8.3.1	Virulence evolution of emerging diseases	340
8.4	Phylogenetic and temporal patterns of emergence	342
8.4.1	Which diseases emerge, and in which hosts?	342
8.4.2	Are EIDs increasing?	344
8.5	Environmental change and emergence	348
8.5.1	Land use changes	349
8.5.2	Trade and transport changes	354
8.5.3	Climate change and emerging diseases	358
8.6	Conservation and control	364
8.6.1	Monitoring	365
8.6.2	Contact reduction	371
8.6.3	Vaccination	379
8.7	Conclusions	383
9	Where do we go from here?	386
