<i>Preface</i>	page xi
<i>Contributors</i>	xv

I Evolutionary biology of animal host–bacteria interactions

- 1 How have bacteria contributed to the evolution of multicellular animals? 3
Carole S. Hickman
- 2 The interface of microbiology and immunology: A comparative analysis of the animal kingdom 35
Margaret McFall-Ngai
- 3 Co-evolution of bacteria and their hosts: A marriage made in heaven or hell? 57
Jörg Hacker, Ulrich Dobrindt, Michael Steinert, Hilde Merkert, and Ute Hentschel
- 4 Industrial revolution and microbial evolution 73
Fernando de la Cruz and Julian Davies
- 5 Bacteria evolve and function within communities: Observations from experimental *Pseudomonas* populations 83
Paul B. Rainey

II Bacterial ecology and the host as an environment

- 6 Coral symbioses: The best and worst of three kingdoms 103
Eugene Rosenberg

7 Interactions between inherited bacteria and their hosts: The <i>Wolbachia</i> paradigm	119
<i>Zoe L. Veneti, Max Reuter, Horacio Montenegro, Emily A. Hornett, Sylvain Charlat, and Gregory D. Hurst</i>	
8 Microbial communities in lepidopteran guts: From models to metagenomics	143
<i>Jo Handelsman, Courtney J. Robinson, and Kenneth F. Raffa</i>	
9 Commensal diversity and the immune system: Modelling the host-as-network	169
<i>Robert M. Seymour</i>	
III Cellular interactions at the bacteria–host interface	
10 Beneficial intracellular bacteria in the <i>Dryophthoridae</i> : Evolutionary and immunological features of a pathogenic-like relationship	203
<i>Abdelaziz Heddi and Caroline Anselme</i>	
11 Type III secretion in <i>Bordetella</i> –host interactions	223
<i>Seema Mattoo and Jeffrey F. Miller</i>	
12 Resident bacteria as inductive signals in mammalian gut development	249
<i>Lora V. Hooper</i>	
13 Virulence or commensalism: Lessons from the urinary tract	265
<i>Göran Bergsten, Björn Wullt, and Catharina Svanborg</i>	
IV Bacterial interactions with the immune system	
14 Host responses to bacteria: Innate immunity in invertebrates	293
<i>L. Courtney Smith</i>	
15 Bacterial recognition by mammalian cells	321
<i>Clare E. Bryant and Sabine Töttemeyer</i>	
16 Moonlighting in protein hyperspace: Shared moonlighting proteins and bacteria–host cross talk	347
<i>Brian Henderson</i>	

17 Cell signalling pathways as targets for bacterial evasion and pathology	375
<i>Andrew S. Neish</i>	
18 Shaping of the the bacterial world by human intervention	399
<i>Rino Rappuoli</i>	
<i>Index</i>	409
