<i>List of contributors</i>	<i>page</i>	viii
<i>Preface</i>		xvii
I Imaging and modelling of fungi in the environment		1
1 Imaging complex nutrient dynamics in mycelial networks <i>Daniel P. Bebber, Monika Tlalka, Juliet Hynes, Peter R. Darrah, Anne Ashford, Sarah C. Watkinson, Lynne Boddy and Mark D. Fricker</i>		3
2 Natural history of the fungal hypha: how Woronin bodies support a multicellular lifestyle <i>Gregory Jedd</i>		22
3 Environmental sensing and the filamentous fungal lifestyle <i>Nick D. Read</i>		38
4 Berkeley Award Lecture: Mathematical modelling of the form and function of fungal mycelia <i>Fordyce A. Davidson</i>		58
II Functional ecology of saprotrophic fungi		75
5 Mineral transformations and biogeochemical cycles: a geomycological perspective <i>Geoffrey M. Gadd, Euan P. Burford, Marina Fomina and Karrie Melville</i>		77
6 Mycelial responses in heterogeneous environments: parallels with macroorganisms <i>Lynne Boddy and T. Hefin Jones</i>		112

7	Natural abundance of ^{15}N and ^{13}C in saprotrophic fungi: what can they tell us? <i>Andy F. S. Taylor and Petra M. A. Fransson</i>	141
III	Mutualistic interactions in the environment	159
8	Mycorrhizas and the terrestrial carbon cycle: roles in global carbon sequestration and plant community composition <i>Jonathan R. Leake</i>	161
9	Water relations in lichens <i>Rosmarie Honegger</i>	185
10	Development of the arbuscular mycorrhizal symbiosis: insights from genomics <i>Jinyuan Liu, Melina Lopez-Meyer, Ignacio Maldonado-Mendoza and Maria J. Harrison</i>	201
IV	Pathogenic interactions in the environment	225
11	Functional genomics of plant infection by the rice blast fungus <i>Magnaporthe grisea</i> <i>Joanna M. Jenkinson, Richard A. Wilson, Zachary Cartwright, Darren M. Soanes, Michael J. Kershaw, and Nicholas J. Talbot</i>	227
12	Exploring the interaction between nematode-trapping fungi and nematodes by using DNA microarrays <i>Anders Tunlid</i>	255
13	Role of $\alpha(1-3)$ -glucan in <i>Aspergillus fumigatus</i> and other human fungal pathogens <i>Anne Beauvais, David S. Perlin and Jean Paul Latgé</i>	269
14	Plagues upon houses and cars: the unnatural history of <i>Meruliporia incrassata</i> , <i>Serpula lacrymans</i> and <i>Sphaerobolus stellatus</i> <i>Nicholas P. Money</i>	289
V	Environmental population genetics of fungi	311
15	Fungal species: thoughts on their recognition, maintenance and selection <i>John W. Taylor, Elizabeth Turner, Anne Pringle, Jeremy Dettman and Hanna Johannesson</i>	313

16	Multilocus sequence typing (MLST) and multilocus microsatellite typing (MLMT) in fungi <i>Matthew C. Fisher</i>	340
VI	Molecular ecology of fungi in the environment	355
17	Fungi in the hidden environment: the gut of beetles <i>Meredith Blackwell, Sung-Oui Suh and James B. Nardi</i>	357
18	A saltmarsh decomposition system and its ascomycetous laccase genes <i>Steven Y. Newell, Justine I. Lyons and Mary Ann Moran</i>	371
	<i>Index</i>	379
