<i>List of contributors</i>	page viii
Introduction	1
<i>M. Buchanan, G. Caldarelli, P. De Los Rios, F. Rao and M. Vendruscolo</i>	
1 Network views of the cell	4
<i>Paolo De Los Rios and Michele Vendruscolo</i>	
1.1 The network hypothesis	4
1.2 The central dogma and gene regulatory networks	5
1.3 Protein–protein interaction networks	7
1.4 Metabolic networks	9
1.5 Signaling networks	11
1.6 Networked networks and cell functionality	12
1.7 Concluding remarks	13
2 Transcriptional regulatory networks	14
<i>Sarath Chandra Janga and M. Madan Babu</i>	
2.1 Introduction	14
2.2 Transcriptional regulation in prokaryotes and eukaryotes	19
2.3 Structure of transcriptional regulatory networks	20
2.4 Evolution of transcriptional regulatory networks	25
2.5 Dynamics of transcriptional regulatory networks	29
2.6 Conclusions	34
3 Transcription factors and gene regulatory networks	36
<i>Matteo Brilli, Elisa Calistri and Pietro Lió</i>	
3.1 Introduction	36
3.2 Promoters' complexity/eukaryotic gene promoters	37
3.3 Transcription factors	41
3.4 Bioinformatics of regulatory networks	46

4	Experimental methods for protein interaction identification	53
	<i>Peter Uetz, Björn Titz, Seesandra V. Rajagopala and Gerard Cagney</i>	
4.1	Introduction	53
4.2	Protein complementation techniques	57
4.3	Affinity purification methods	62
4.4	Protein complex purification and mass spectrometry	65
4.5	Protein and peptide chips	73
4.6	Other methods for interaction detection and functional analysis	74
4.7	Quality of large-scale interaction data	75
4.8	Comparison of methods	77
4.9	Conclusions	80
5	Modeling protein interaction networks	83
	<i>Francesco Rao</i>	
5.1	Introduction	83
5.2	Scaling laws and network topology	85
5.3	Predicting protein interactions	87
5.4	Towards models at an atomic level of resolution	88
5.5	Concluding remarks	90
6	Dynamics and evolution of metabolic networks	93
	<i>Daniel Segre</i>	
6.1	Introduction	93
6.2	Cellular metabolism and its regulation	93
6.3	Metabolism across disciplines	96
6.4	Dynamics of a metabolic system	98
6.5	Stoichiometric analysis	100
6.6	Constraint-based modeling: feasible states and optimality	103
6.7	Predicting genetic perturbations	108
6.8	Double perturbations and epistatic interactions	109
6.9	The ancient history of metabolism: from cell-scale to biosphere-scale	112
6.10	Conclusions	116
7	Hierarchical modularity in biological networks: the case of metabolic networks	117
	<i>Erzsébet Ravasz Regan</i>	
7.1	Introduction	117
7.2	Modularity and hubs in biological networks	119
7.3	Scaling of the clustering coefficient: a signature of hierarchy	121
7.4	Method for finding network modules	123
7.5	A case study: the <i>E. coli</i> metabolic network	126

7.6	Hierarchy, fractality and the small world of networks	131
7.7	Conclusions	134
8	Signalling networks	135
	<i>Gian Paolo Rossini</i>	
8.1	Introduction	135
8.2	Chemical signalling: many pathways following a few general themes	136
8.3	Cross-talks among signal transduction pathways	159
8.4	Signalling networks, system organization and modelling	166
8.5	Conclusions and outlook	169
Appendix A	Complex networks: from local to global properties	170
	<i>D. Garlaschelli and G. Caldarelli</i>	
Appendix B	Modelling the local structure of networks	188
	<i>D. Garlaschelli and G. Caldarelli</i>	
Appendix C	Higher-order topological properties	210
	<i>S. Ahnert, T. Fink and G. Caldarelli</i>	
Appendix D	Elementary mathematical concepts	219
	<i>A. Gabrielli and G. Caldarelli</i>	
	<i>References</i>	235
	<i>Index</i>	269
