

Contents

Preface	vii
Acknowledgements	ix
Part 1: Ecology and biology of plants of the west coast	1
The Western Australian coast	1
Conservation planning	3
The Perth coast	4
The Swan Coastal Plain	5
Dunes	6
Plants as storytellers of geomorphology	7
Coastal dune geomorphology	9
Blowouts	10
How plants adapt to life on the coast	13
Seed dispersal	14
Plants that colonise without seeds	16
Rapid growth rates and early maturing in dune plants	16
Dune species are nutrient limited	17
Coping with salt, high wind and alkaline soils	17
Coping with fire	19
Part 2: Ecological restoration of coastal dune vegetation	21
Ecological restoration	21
Developing a coastal ecological restoration program	22
Planning	22
Defining a reference system	24
Monitoring and evaluation	25
Restoration planning	26
The restoration toolkit	27
Site and erosion stabilisation	29
Plant protection devices	29

Interception and sand-capture fencing	30
Soil-stabilising materials	31
Matting	31
Brushing	32
Seed collection, storage and use in restoration	34
The seed caveat for Australian species	35
Sourcing seed; seed collection	37
Cleaning and sorting to optimise viable seed	38
Impact of provenance on genetic values of wild populations	40
Smoke techniques for restoration of native Australian species	44
Identification of a potent germination chemical in smoke	45
The germination environment	45
Sowing coastal spinifex seed	46
Seed sowing	47
Seed banking	47
Classifying seed dormancy in coastal species	47
Is the seed of my coastal species dormant?	48
Species with intractable germination	49
Viability adjusted germination (VAG)	49
Direct seeding (broadcast seeding)	51
Cutting propagation	52
Plant division	53
Part 3: Biogeography of coastal plants in the Perth region	54
Coastal weeds	55
Why are weeds so prevalent in coastal ecosystems?	58
Part 4: Species guide	61
Appendix:	
Coastal plants on which butterflies or sun-moths breed	268
Index	272
