Preface xiii

1. What Is "Gene Sharing"?	1
New Functions for Old Proteins and the Question of Gene Duplication	2
Origin of the Term "Gene Sharing"	3
Gene Sharing: General Definition and Implications	4
Protein Location and Gene Regulation	5
Why the Term "Gene Sharing"?	7
Mechanisms for Diversifying Gene Functions	10
Posttranslational Modifications	14
Conditions for Initiating Gene Sharing	14
Contrasting Phenotype with Protein Function	16
Take-Home Message	18
2. Multifunctions and Functional Shifts: Echos from the Past	19
Preadaptation, Prospective Adaptation, and Hopeful Monsters	19
Quirky Functional Shifts and Exaptation	21
Spandrels and Gene Sharing	22
Gene Regulation and Tinkering	24
Take-Home Message	26
3. The Elusive Concept of a "Gene"	27
The Classical Gene Concept	28
The Mendel-Morgan Chromosomal Theory of the Gene	33
Later Developments: One Gene/One Enzyme/One Polypeptide	34

The Molecular Era of the Gene: So Much Data, So Many Possibilities	36
Quantifying Genes before the Molecular Era	37
Quantifying Genes in the Molecular Era: Fewer than Expected	38
Noncoding Regulatory Genes	40
Protein Diversity	41
The Ambiguous Gene	46
The "Molecular Gene" Concept	48
The "Molecular Process Gene" Concept	49
The "Evolutionary Gene" Concept	49
Two Concepts for One Gene: Gene-P/Gene-D	51
Gene Sharing: A Concept Incorporating an "Open Gene"	52
Take-Home Message	53
 4. Eyes and Lenses: Gene Sharing by Crystallins	 54
Eye Diversity: Many Forms to Perform a Function	56
The Lens	59
Crystallins and the Optical Properties of the Lens	60
Diversity and Taxon-Specificity of Lens Crystallins	63
Crystallins and Gene Sharing	66
The $\beta\gamma$ -Crystallins: A Superfamily with Distant Stress Connections	71
The Enzyme-Crystallins of Vertebrates	75
Crystallins of Invertebrates	80
<i>Crystallin</i> Gene Regulation in Vertebrates: A Similar Cast of Transcription Factors	83
Convergent Evolution of <i>Crystallin</i> Gene Expression	86
Evolution of Gene Sharing by shsp/ α B-Crystallin	89
Convergent Evolution of Invertebrate and Vertebrate Crystallin Promoters	91
Potential for Lens-Specific Promoter Activity	93
Convergent Evolution and Relaxed Stringency for Crystallins	94
Take-Home Message	95
 5. The Enigmatic "Corneal Crystallins": Putative Cases of Gene Sharing	 96
The Cornea	96
Aldehyde Dehydrogenase: A Candidate Corneal Crystallin	99

Other Candidate Corneal Crystallins: Transketolase, Isocitrate Dehydrogenase, and Cyclophilin	101
C/L-Gelsolin: A Corneal Crystallin in Zebrafish	103
A Signaling Role for C/L-Gelsolin	105
Corneal Gene Expression	107
The Refracton Hypothesis: Implications for Gene Sharing	109
Take-Home Message	110

6. Gene Sharing as a Common Event: Many Multifunctional Proteins 111

Glycolytic Enzymes and the Versatile Hexokinases	111
Citrate Synthase: An Enzyme and a Cytoskeletal Structure	114
Lactate Dehydrogenase: An Enzyme for All Seasons	115
Regulation of mRNA Translation by Enzyme Binding	118
Glyceraldehyde-3-phosphate Dehydrogenase: Constant Surprises	118
Enolase: Another Versatile Protein	123
Bacterial Surface Enzymes	125
Xanthine Oxidoreductase: Enzyme and Envelope	125
The Thioredoxin/Ribonucleotide Reductase System and Thioredoxin Family Members: From Redox to Morphogenesis	126
Serum Albumin: Transport Protein, Enzymatic Vasodilator and Detoxifier	133
Gelsolin: Roles in Cytoskeletal Structure, Gene Expression, Cell Death, and Signal Transduction	135
Cytochrome c: Roles in Electron Transport, Cell Death, and Light Filtration	137
Take-Home Message	140

7. Gene Sharing during Gene Expression 141

Complexity of Transcription	141
Nuclear Receptors	142
Metabolic Enzymes and Gene Expression	143
Y-Box Proteins	146
Transcription Factors as Translational Regulators: Bicoid	149
Translation Factors for RNA Export: eIF4	150
Homeoproteins, Chromosomal Proteins and Actin	150
The Dynamic Flux of Nuclear Proteins	152
Take-Home Message	152

8. Gene Sharing As a Dynamic Evolutionary Process: Antifreeze Proteins and Hemoglobins	153
Antifreeze Proteins	153
Hemoglobins	165
Take-Home Message	171
9. Gene Duplication and the Evolution of New Functions	173
Gene Duplication and Retention of Redundant Genes	174
Birth-and-Death of Duplicated Genes	176
Adaptive Evolution by Positive Selection: New Functions after Gene Duplication	178
Subfunctionalization and Gene Sharing	181
Rapid Subfunctionalization with Slow Neofunctionalization	186
Gene Sharing Is Independent of Gene Duplication	186
Lens Crystallins: Gene Sharing at Different Stages of Duplication	189
Take-Home Message	194
10. Gene Sharing and Systems Biology: Implications and Speculations	195
Networks	195
Evolvability	199
Selective Pressure Affecting Gene Regulation	205
Functional Switching and the Notion of Functional " Trespassing "	208
Functional Noise	208
Genetic Differences in Levels of Gene Expression	210
The Molecular Clock	211
Gene Knockout Experiments	215
Gene Deletion of β -catenin	217
Horizontal Gene Transfer	219
Take-Home Message	223
11. Recapitulations: Ambiguities and Possibilities	224
Ambiguity of Cause and Effect	224
Natural Selection and Random Drift	225
Gene Sharing and Robustness: When Is a Mutation Neutral?	226
Inconsistency with Design	227
Naming Is Not Knowing	228

The Question of Tissue Homology	229
Phylogenetic Trees: The Complication of Function	230
Defining and Counting Genes	230
Definition of Polypeptide Function: The Ambiguity of Molecular Mechanism	231
Between Genotype and Phenotype	231
Gene Sharing and the Importance of Research on Diverse Species	232
Medical Implications	233
<i>Glossary</i>	237
<i>References</i>	241
<i>Index</i>	306
