

Contents

Preface	xv
Chapter 1 Introduction to Genetics	1
Royal Hemophilia and Romanov DNA	1
The Importance of Genetics	4
The Role of Genetics in Biology	5
Genetic Diversity and Evolution	5
Divisions of Genetics	6
Model Genetic Organisms	6
A Brief History of Genetics	7
Prehistory	8
Early Written Records	8
The Rise of Genetics	10
Modern Genetics	11
The Future of Genetics	11
Basic Concepts in Genetics	12
The New Genetics ETHICS • SCIENCE • TECHNOLOGY	
Choosing the Sex of Your Child by Ron Green	13
Chapter 2 Chromosomes and Cellular Reproduction	17
The Blind Men's Riddle	17
Basic Cell Types: Structure and Evolutionary Relationships	18
Cell Reproduction	21
Prokaryotic Cell Reproduction	21
Eukaryotic Cell Reproduction	21
The Cell Cycle and Mitosis	23
The Movement of Chromosomes in Mitosis	27
Genetic Consequences of the Cell Cycle	27
Control of the Cell Cycle	28
 Connecting Concepts Counting Chromosomes and DNA Molecules	29
Sexual Reproduction and Genetic Variation	30
Meiosis	30
Consequences of Meiosis	32
 Connecting Concepts Comparison of Mitosis and Meiosis	36
Separation of Sister Chromatids and Homologous Chromosomes	37
Meiosis in the Life Cycles of Plants and Animals	38

Chapter 3 Basic Principles of Heredity	47
Black Urine and First Cousins	47
Mendel: The Father of Genetics	48
Mendel's Success	49
Genetic Terminology	49
Monohybrid Crosses	50
What Monohybrid Crosses Reveal	51
 Connecting Concepts Relating Genetic Crosses to Meiosis	53
Predicting the Outcomes of Genetic Crosses	53
The Testcross	58
Incomplete Dominance	58
Genetic Symbols	59
 Connecting Concepts Ratios in Simple Crosses	60
Multiple-Loci Crosses	61
Dihybrid Crosses	61
The Principle of Independent Assortment	61
The Relation of the Principle of Independent Assortment to Meiosis	62
Applying Probability and the Branch Diagram to Dihybrid Crosses	62
The Dihybrid Testcross	63
Observed and Expected Ratios	65
The Goodness-of-Fit Chi-Square Test	65
The New Genetics ETHICS • SCIENCE • TECHNOLOGY	
Rest in Peace, Mr. Lincoln? by Arthur L. Caplan and Ron Green	68
Chapter 4 Sex Determination and Sex-Linked Characteristics	75
Sex Wars in Isopods	75
Sex Determination	77
Chromosomal Sex-Determining Systems	77
Genetic Sex-Determining Systems	79
Environmental Sex Determination	80
Sex Determination in <i>Drosophila melanogaster</i>	80
Sex Determination in Humans	81
Sex-Linked Characteristics	83
X-Linked White Eyes in <i>Drosophila</i>	84
Nondisjunction and the Chromosome Theory of Inheritance	85

 Model Organism: The Fruit Fly <i>Drosophila melanogaster</i>	86
X-Linked Color Blindness in Humans	88
Symbols for X-Linked Genes	89
Dosage Compensation	90
Z-Linked Characteristics	92
Y-Linked Characteristics	92
 Connecting Concepts Recognizing Sex-Linked Inheritance	94

Chapter 5 Extensions and Modifications of Basic Principles 101

Birth Weight and Genomic Imprinting	101
Dominance Revisited	102
Penetrance and Expressivity	104
Lethal Alleles	105
Multiple Alleles	105
Duck-Feather Patterns	105
The ABO Blood Group	106
Gene Interaction	107
Gene Interaction That Produces Novel Phenotypes	107
Gene Interaction with Epistasis	108
 Connecting Concepts Interpreting Ratios Produced by Gene Interaction	111
The Complex Genetics of Coat Color in Dogs	112
Complementation: Determining Whether Mutations Are at the Same or Different Loci	115
Interaction Between Sex and Heredity	115
Sex-Influenced and Sex-Limited Characteristics	115
Cytoplasmic Inheritance	117
Genetic Maternal Effect	119
Genomic Imprinting	120
Anticipation	122
Interaction Between Genes and Environment	122
Environmental Effects on Gene Expression	122
The Inheritance of Continuous Characteristics	123

Chapter 6 Pedigree Analysis and Applications 132

Lou Gehrig and Superoxide Free Radicals	132
The Study of Human Genetic Characteristics	133
Analyzing Pedigrees	134
Autosomal Recessive Traits	135
Autosomal Dominant Traits	136
X-Linked Recessive Traits	137
X-Linked Dominant Traits	139
Y-Linked Traits	139

Twin Studies	141
Concordance	141
Twin Studies and Obesity	142
Adoption Studies	143
Adoption Studies and Obesity	144
Adoption Studies and Alcoholism	145
Genetic Counseling	145
Genetic Testing	146

Prenatal Genetic Testing	147
Postnatal Genetic Testing	149

The New Genetics ETHICS • SCIENCE • TECHNOLOGY

Lifesaving Sibling or Designer Baby? by Ron Green	150
---	-----

INTEGRATIVE CASE STUDY Phenylketonuria: Part I 156

PKU and Dominance	156
Multiple Alleles at the <i>PAH</i> Locus	157
PKU As a Multifactorial Trait	157
The Treatment of PKU	157
PKU As a Genetic Maternal Effect	158
Newborn Screening for PKU	158
Genetic Risk and Genetic Counseling for PKU	159

Chapter 7 Linkage, Recombination, and Eukaryotic Gene Mapping 160

Alfred Sturtevant and the First Genetic Map	160
Genes That Assort Independently and Those That Don't	161
Linkage and Recombination Between Two Genes	163
Notation for Crosses with Linkage	163
Complete Linkage Compared with Independent Assortment	164
Crossing Over with Linked Genes	164
Calculating Recombination Frequency	167
Coupling and Repulsion	167
 Connecting Concepts Relating Independent Assortment, Linkage, and Crossing Over	169
Evidence for the Physical Basis of Recombination	169
Predicting the Outcome of Crosses with Linked Genes	170
Testing for Independent Assortment	171
Gene Mapping with Recombination Frequencies	173
Constructing a Genetic Map with Two-Point Testcrosses	174
Linkage and Recombination Between Three Genes	175
Constructing a Genetic Map with the Three-Point Testcross	176

 Connecting Concepts Stepping Through the Three-Point Cross	181
Mapping Human Genes	182
Mapping with Molecular Markers	184

Physical Chromosome Mapping 184

Deletion Mapping	184
Somatic-Cell Hybridization	185
In Situ Hybridization	186
Mapping by DNA Sequencing	186

Chapter 8 Bacterial and Viral Genetic Systems 197

Gutsy Travelers	197
-----------------	-----

Bacterial Genetics 199

Techniques for the Study of Bacteria	199
The Bacterial Genome	201
Plasmids	201
Gene Transfer in Bacteria	202
Conjugation	204
Natural Gene Transfer and Antibiotic Resistance	210
Transformation in Bacteria	211
Bacterial Genome Sequences	212

 Model Organism: The Bacterium <i>Escherichia coli</i>	213
---	-----

Viral Genetics 215

Techniques for the Study of Bacteriophages	216
Gene Mapping in Phages	217
Transduction: Using Phages to Map Bacterial Genes	218

 Connecting Concepts Three Methods for Mapping Bacterial Genes	221
---	-----

Fine-Structure Analysis of Bacteriophage Genes	222
Overlapping Genes	225
RNA Viruses	226
Prions: Pathogens Without Genes	228

Chapter 9 Chromosome Variation 235

Once in a Blue Moon	235
---------------------	-----

Chromosome Variation 236

Chromosome Morphology	236
Types of Chromosome Mutations	238

Chromosome Rearrangements 238

Duplications	238
Deletions	240
Inversions	242
Translocations	244
Fragile Sites	247

Aneuploidy 247

Types of Aneuploidy	248
Effects of Aneuploidy	249
Aneuploidy in Humans	249
Uniparental Disomy	253
Mosaicism	253

Polyploidy 254

Autopolyploidy	254
Allopolyploidy	255
The Significance of Polyploidy	256

Chromosome Mutations and Cancer 257

The New Genetics ETHICS • SCIENCE • TECHNOLOGY	
A Duty to Warn? by Ron Green	260

Chapter 10 DNA: The Chemical Nature of the Gene 266

The Elegantly Stable Double Helix: Ice Man's DNA	266
--	-----

Characteristics of Genetic Material 267

The Molecular Basis of Heredity 268

Early Studies of DNA	268
DNA As the Source of Genetic Information	269
Watson and Crick's Discovery of the Three-Dimensional Structure of DNA	273
RNA As Genetic Material	274

The Structure of DNA 275

The Primary Structure of DNA	275
Secondary Structures of DNA	277

 Connecting Concepts Genetic Implications of DNA Structure	279
---	-----

Special Structures in DNA and RNA 280

DNA Methylation	282
Bends in DNA	282

Chapter 11 Chromosome Structure and Transposable Elements 287

How Much DNA Does It Take to Make an Organism?	287
--	-----

Packing DNA into Small Spaces 288

The Bacterial Chromosome 290

The Eukaryotic Chromosome 290

Chromatin Structure	290
Centromere Structure	295
Telomere Structure	296
Artificial Chromosomes	297

Variation in Eukaryotic DNA Sequences	298
The Denaturation and Renaturation of DNA	298
Types of DNA Sequence in Eukaryotes	298
The Nature of Transposable Elements	299
General Characteristics of Transposable Elements	299
Transposition	300
The Mechanisms of Transposition	300
The Mutagenic Effects of Transposition	303
The Regulation of Transposition	303
The Structure of Transposable Elements	304
Transposable Elements in Bacteria	304
Transposable Elements in Eukaryotes	306
 Connecting Concepts Classes of Transposable Elements	311
The Evolution of Transposable Elements	312

Chapter 12 DNA Replication and Recombination **318**

Preventing Train Wrecks in Replication	318
The Central Problem of Replication	319
Semiconservative Replication	320
Meselson and Stahl's Experiment	321
Modes of Replication	321
Requirements of Replication	325
Direction of Replication	325
The Mechanism of Replication	327
Bacterial DNA Replication	328
 Connecting Concepts The Basic Rules of Replication	334
Eukaryotic DNA Replication	334
Replication in Archaea	339
Molecular Basis of Recombination	339
Models of Recombination	340
Enzymes Required for Recombination	341

Chapter 13 Transcription **348**

RNA in the Primeval World	348
RNA Molecules	349
The Structure of RNA	349
Classes of RNA	350
Transcription: Synthesizing RNA from a DNA Template	351
The Template	351
The Substrate for Transcription	354
The Transcription Apparatus	355

The Process of Bacterial Transcription	356
Initiation	356
Elongation	359
Termination	359

 Connecting Concepts The Basic Rules of Transcription	361
---	-----

The Process of Eukaryotic Transcription **361**

Transcription and Nucleosome Structure	361
Transcription Initiation	361
RNA Polymerase II Promoters	362
RNA Polymerase I and III Promoters	364
 Connecting Concepts Characteristics of Eukaryotic Promoters and Transcription Factors	364
Elongation	365
Termination	365

The Process of Transcription in Archaea **366**

Chapter 14 RNA Molecules and RNA Processing **372**

The Immense Dystrophin Gene **372** **Gene Structure** **373**

Gene Organization	373
Introns	375
The Concept of the Gene Revisited	376

Messenger RNA **376**

The Structure of Messenger RNA	376
Pre-mRNA Processing	377
The Addition of the 5' Cap	378
The Addition of the Poly(A) Tail	379
RNA Splicing	380
Alternative Processing Pathways	385
RNA Editing	386

 Connecting Concepts Eukaryotic Gene Structure and Pre-mRNA Processing	387
--	-----

Transfer RNA **389**

The Structure of Transfer RNA	389
Transfer RNA Gene Structure and Processing	390

Ribosomal RNA **391**

The Structure of the Ribosome	392
Ribosomal RNA Gene Structure and Processing	392

Small Interfering RNAs and MicroRNAs **393**

RNA Interference	393
 Model Organism: The Nematode Worm <i>Caenorhabditis elegans</i>	394

Chapter 15 The Genetic Code and Translation 402

The Deadly Diphtheria Toxin 402

The Molecular Relation Between Genotype and Phenotype 403

The One Gene, One Enzyme Hypothesis 403

The Structure and Function of Proteins 407

The Genetic Code 409

Breaking the Genetic Code 410

The Degeneracy of the Code 412

The Reading Frame and Initiation Codons 413

Termination Codons 414

The Universality of the Code 414

 **Connecting Concepts** Characteristics of the Genetic Code 414

The Process of Translation 414

The Binding of Amino Acids to Transfer RNAs 415

The Initiation of Translation 416

Elongation 418

Termination 420

 **Connecting Concepts** A Comparison of Bacterial and Eukaryotic Translation 421

Further Considerations of Protein Synthesis 422

The Three-Dimensional Structure of the Ribosome 422

RNA-RNA Interactions in Translation 423

Polyribosomes 423

Messenger RNA Surveillance 424

The Posttranslational Modifications of Proteins 425

Translation and Antibiotics 426

Nonstandard Protein Synthesis 426

Chapter 16 Control of Gene Expression 433

Creating Giant Mice Through Gene Regulation 433

General Principles of Gene Regulation 434

Levels of Gene Control 435

Genes and Regulatory Elements 435

DNA-Binding Proteins 436

Gene Regulation in Bacterial Cells 436

Operon Structure 436

Negative and Positive Control: Inducible and Repressible Operons 438

The *lac* Operon of *E. coli* 441

lac Mutations 443

Positive Control and Catabolite Repression 446

The *trp* Operon of *E. coli* 447

Attenuation: The Premature Termination of Transcription 448

Antisense RNA in Gene Regulation 452

Riboswitches and RNA-Mediated Repression 452

Transcriptional Control in Bacteriophage Lambda 453

Eukaryotic Gene Regulation 454

Chromatin Structure and Gene Regulation 455

Transcriptional Control in Eukaryotic Cells 457

Gene Control Through Messenger RNA Processing 460

Gene Control Through RNA Stability 462

RNA Silencing 462

Translational and Posttranslational Control 463

 **Connecting Concepts** A Comparison of Bacterial and Eukaryotic Gene Control 464

 **Model Organism:** *Arabidopsis thaliana* 464

Chapter 17 Gene Mutations and DNA Repair 473

The Genetic Legacy of Chernobyl 473

The Nature of Mutation 474

The Importance of Mutations 474

Categories of Mutations 475

Types of Gene Mutations 476

Mutation Rates 481

Causes of Mutations 483

The New Genetics ETHICS • SCIENCE • TECHNOLOGY

Seeking a Disabled Child by Ron Green 484

Spontaneous Replication Errors 484

Spontaneous Chemical Changes 486

Chemically Induced Mutations 488

Radiation 490

The Study of Mutations 492

The Analysis of Reverse Mutations 492

Detecting Mutations with the Ames Test 492

Radiation Exposure in Humans 494

DNA Repair 495

Mismatch Repair 495

Direct Repair 496

Base-Excision Repair 497

Nucleotide-Excision Repair 497

Other Types of DNA Repair 498

 **Connecting Concepts** The Basic Pathway of DNA Repair 498

Genetic Diseases and Faulty DNA Repair 499

INTEGRATIVE CASE STUDY Phenylketonuria: Part II 506

- The *PAH* Locus 506
- Regulatory Sequences 506
- Mutations at the *PAH* Locus 507
- Complicating Factors 507
- Other Loci 508

Chapter 18 Recombinant DNA Technology 509**Feeding the Future Population of the World 509****Basic Concepts of Recombinant DNA Technology 510**

- The Impact of Recombinant DNA Technology 511
- Working at the Molecular Level 511

Recombinant DNA Techniques 512

- Cutting and Joining DNA Fragments 512
- Viewing DNA Fragments 514
- Locating DNA Fragments with Southern Blotting and Probes 516
- Cloning Genes 517
- Finding Genes 523

 Connecting Concepts Cloning Strategies 529

- Using the Polymerase Chain Reaction to Amplify DNA 530
- Analyzing DNA Sequences 532

 Model Organism: The Mouse *Mus musculus* 536**Applications of Recombinant DNA Technology 538**

- Pharmaceuticals 538
- Specialized Bacteria 538
- Agricultural Products 538
- Oligonucleotide Drugs 539
- Genetic Testing 540
- Gene Therapy 541
- Gene Mapping 542
- DNA Fingerprinting 543
- Concerns About Recombinant DNA Technology 545

Chapter 19 Genomics 552**The Decaying Genome of *Mycobacterium leprae* 552****Structural Genomics 554**

- Genetic Maps 554
- Physical Maps 555
- DNA-Sequencing Methods 557
- Sequencing an Entire Genome 560
- The Human Genome Project 563
- Single-Nucleotide Polymorphisms 564

The New Genetics ETHICS • SCIENCE • TECHNOLOGY

- The Human Genome Project: Book of Life or Pandora's Box? by Ron Green 565

Expressed-Sequence Tags 566

Bioinformatics 566

Functional Genomics 566

- Predicting Function from Sequence 566
- Gene Expression and Microarrays 569
- Gene Expression and Reporter Sequences 571
- Genomewide Mutagenesis 572

Comparative Genomics 573

- Prokaryotic Genomes 573
- Eukaryotic Genomes 575

The Future of Genomics 579**Chapter 20 Organelle DNA 587****The Donkey: A Wild Ass or a Half Ass? 587****The Biology of Mitochondria and Chloroplasts 589**

- Mitochondrion and Chloroplast Structure 589
- The Genetics of Organelle-Encoded Traits 590
- The Endosymbiotic Theory 591

Mitochondrial DNA 592

- The Gene Structure and Organization of mtDNA 593
- Nonuniversal Codons in mtDNA 595
- The Replication, Transcription, and Translation of mtDNA 595
- The Evolution of mtDNA 596

 Model Organism: The Yeast *Saccharomyces cerevisiae* 596**Chloroplast DNA 598**

- The Gene Structure and Organization of cpDNA 598
- The Replication, Transcription, and Translation of cpDNA 599
- The Evolution of cpDNA 600

 Connecting Concepts Genome Comparisons 600**The Intergenomic Exchange of Genetic Information 601****Mitochondrial DNA and Aging in Humans 601****Chapter 21 Advanced Topics in Genetics: Developmental Genetics, Immunogenetics, and Cancer Genetics 607****Flies with Extra Eyes 607****Developmental Genetics 608**

- Cloning Experiments 608
- The Genetics of Pattern Formation in *Drosophila* 609
- Homeobox Genes in Other Organisms 616

 Connecting Concepts The Control of Development 616

- The Genetics of Flower Development in *Arabidopsis* 617

Programmed Cell Death in Development	618
Evo-Devo: The Study of Evolution and Development	619
Immunogenetics	620
The Organization of the Immune System	620
Immunoglobulin Structure	621
The Generation of Antibody Diversity	623
T-Cell-Receptor Diversity	625
Major Histocompatibility Complex Genes	626
Genes and Organ Transplants	627
Cancer Genetics	627
The Nature of Cancer	627
Cancer As a Genetic Disease	627
Genetic Changes That Contribute to Cancer	630
The Molecular Genetics of Colorectal Cancer	635
The New Genetics ETHICS • SCIENCE • TECHNOLOGY	
TV Commercials for Genetic Tests by Ron Green	637
Chapter 22 Quantitative Genetics	642
Porkier Pigs Through Quantitative Genetics	642
Quantitative Characteristics	643
The Relation Between Genotype and Phenotype	644
Types of Quantitative Characteristics	645
Polygenic Inheritance	646
Kernel Color in Wheat	646
Determining Gene Number for a Polygenic Characteristic	648
Statistical Methods for Analyzing Quantitative Characteristics	648
Distributions	649
Samples and Populations	649
The Mean	650
The Variance and Standard Deviation	650
Correlation	652
Regression	653
Applying Statistics to the Study of a Polygenic Characteristic	655
Heritability	655
Phenotypic Variance	656
Types of Heritability	657
Calculating Heritability	658
The Limitations of Heritability	660
Locating Genes That Affect Quantitative Characteristics	662
Response to Selection	663
Predicting the Response to Selection	664
Limits to Selection Response	665
Correlated Responses	666

Chapter 23 Population and Evolutionary Genetics	676
The Genetic History of Tristan da Cuna	676
Genetic Variation	677
Calculating Genotypic Frequencies	678
Calculating Allelic Frequencies	678
The Hardy-Weinberg Law	680
Closer Examination of the Assumptions of the Hardy-Weinberg Law	681
Implications of the Hardy-Weinberg Law	681
Extensions of the Hardy-Weinberg Law	682
Testing for Hardy-Weinberg Proportions	682
Estimating Allelic Frequencies with the Hardy-Weinberg Law	683
Nonrandom Mating	683
Changes in Allelic Frequencies	686
Mutation	686
Migration	687
Genetic Drift	689
Natural Selection	692
 Connecting Concepts The General Effects of Evolutionary Forces	696
Molecular Evolution	697
Protein Variation	698
DNA Sequence Variation	700
Molecular Phylogenies	703
Rates of Molecular Evolution	706
The Molecular Clock	707
Genome Evolution	708
INTEGRATIVE CASE STUDY Phenylketonuria: Part III	716
Incidence of PKU in Human Populations	716
PAH Mutations in Human Populations	716
PAH Mutations and Haplotypes	716
The Origin and Spread of PAH Mutations in European Populations	717
Calculating Allelic and Genotypic Frequencies at the PAH Locus	718
The Balance Between Mutation and Natural Selection for PKU Mutations	719
Other Possible Causes of the High Frequency of PKU in European Populations	719
Glossary	G-1
Suggested Readings	S-1
Answers to Selected Questions and Problems	A-1
Index	I-1
