PART ONE FOUNDATIONS OF MICROBIOLOGY

xxx

1 Microbiology: Then and Now

3

1.1

THE BEGINNINGS OF MICROBIOLOGY

Anton van Leeuwenhoek Describes "Animalcules"

6

6

1.2

THE TRANSITION PERIOD

Does Life Generate Itself Spontaneously?

Epidemiology Lends Support to Disease Transmission

10

10

11

1.3

THE CLASSICAL GOLDEN AGE OF MICROBIOLOGY (1854–1914)

Louis Pasteur Proposes that Germs Cause Infectious Disease

Pasteur's Work Contributes to Disease

Identification and Control

Robert Koch Formalizes Standards to Identify

Germs with Infectious Disease

Koch Develops Pure Culture Techniques

Competition Fuels the Study of Infectious Disease

Other Global Pioneers Contribute to Microbiology

Microbes Represent a Diverse Group of Organisms

17

17

19

20

21

21

24

27

1.4

THE SECOND GOLDEN AGE OF MICROBIOLOGY (1943–1970)

Microbial Genetics Depends on Microorganisms

Two Types of Cellular Organization Are Realized

Antibiotics Are Used to Cure Infectious Disease

29

29

29

30

1.5

THE THIRD GOLDEN AGE OF MICROBIOLOGY—NOW

Microbiology Again Is Facing Many Challenges

Microbial Ecology and Evolution Are Helping

Drive the New Golden Age

33

33

35

Microorganisms Are the "Invisible Emperors" of the World 37

Chapter Review 38

Note to the Student · Summary of Key Concepts · Questions
for Thought and Discussion · Review

2 The Chemical Building Blocks of Life

44

2.1

THE ELEMENTS OF LIFE

Atoms Are Composed of Subatomic Particles

Isotopes Vary in the Number of Neutrons Present

Atoms Can Become Electrically Charged

Electron Placement Determines Chemical Reactivity

Compounds and Molecules Form

Through Chemical Bonding

45

45

47

48

48

49

2.2

CHEMICAL BONDING

Ionic Bonds Form Between Oppositely Charged Ions

Covalent Bonds Share Electrons

Hydrogen Bonds Form Between Polar Groups or Molecules

Chemical Reactions Change Bonding Partners

51

52

52

53

53

2.3

WATER AND pH

Water Is the Universal Solvent of Life

Acids and Bases Must Be Balanced in Cells

Buffers Prevent pH Shifts

55

55

55

56

2.4

MAJOR ORGANIC COMPOUNDS OF LIVING ORGANISMS

Functional Groups Define Molecular Behavior

Carbohydrates Provide Energy and Building Materials

Lipids Store Energy and Are Components of Membranes

Proteins Are the Workhorses of Cells

Nucleic Acids Store, Transport, and Control Hereditary

Information

Chapter Review

Note to the Student · Summary of Key Concepts · Questions

for Thought and Discussion · Review

58

59

62

63

68

72

3 Basic Concepts of Microbiology 76

3-1

A BRIEF SURVEY OF MICROORGANISMS 78

Prokaryotes and Eukaryotes Have Some Structures That Are Universal	78
Prokaryotes and Eukaryotes Are Structurally Distinct	79
Bacteria Are Among the Most Abundant Organisms on Earth	81
Protista (Protozoa and Unicellular Algae) Are Very Diverse Eukaryotic Microbes	84
Fungi Have a Distinctive Growth Style	86
Viruses Are the Smallest Microorganisms	89

3-2

CATALOGING MICROORGANISMS 92

Classification Attempts to Catalog Organisms	92
The Five-Kingdom System Recognizes Prokaryotic and Eukaryotic Differences	94
Classification Uses a Hierarchical System	96
The Three-Domain System Places the Monera in Separate Lineages	96
Bacterial Taxonomy Now Includes Molecular Criteria	98
Nomenclature Gives Scientific Names to Organisms	99

3-3

MICROSCOPY 101

Most Microorganisms Are In the Micrometer Size Range	101
Light Microscopy Uses Visible Light to Resolve Objects	101
Magnification and Resolution Define the Limits of What Is Visible	102
Staining Techniques Provide Contrast	105
Light Microscopy Has Other Optical Configurations	108
Electron Microscopy Provides Detailed Images of Cells and Cell Parts	110
Chapter Review	113
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

PART TWO

THE BACTERIA 118

4 Bacterial Structure and Growth 121

4-1

THE SHAPES AND ARRANGEMENTS OF BACTERIA 122

Bacilli Have a Cylindrical Shape	122
Cocci Form a Variety of Arrangements	123
Spirals and Other Shapes Also Exist	123

4-2

THE STRUCTURE OF BACTERIA 124

Bacterial Flagella Provide Motility	124
Pili Are Structures Used for Attachment	127

The Glycocalyx is a Sticky Layer Coating Many Bacteria	128
The Cell Wall Provides Shape and Protection	130
The Cell Membrane Is a Permeability Barrier	133
The Cytoplasm Is the Center of Biochemical Activity	134
Endospores Are Designed For Dormancy	136

4-3

BACTERIAL REPRODUCTION 141

Bacteria Reproduce by Binary Fission	141
--------------------------------------	-----

4-4

BACTERIAL GROWTH 143

The Bacterial Growth Curve Illustrates the Dynamics of Growth	143
Temperature Is One of the Most Important Factors Governing Growth	145
Oxygen Can Support or Hinder Growth	146
Most Bacteria Prefer to Grow at a Neutral pH	149

4-5

CULTURE MEDIA AND GROWTH MEASUREMENTS 150

Culture Media Contain the Nutrients to Grow Bacteria	150
Culture Media Can Be Devised to Select for and Differentiate between Bacteria	150
Population Measurements Are Made Using Pure Cultures	154
Population Growth Can Be Measured in Several Ways	155
Chapter Review	156
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

5 Bacterial Metabolism 161

5-1

ENZYMES AND ENERGY IN METABOLISM 163

Enzymes Catalyze Chemical Reactions	163
Enzymes Act Through Enzyme-Substrate Complexes	164
Enzymes Often Act Through Metabolic Pathways	167
Enzyme Activity Is Regulated and Can Be Inhibited	168
Energy in the Form of ATP Is Required For Metabolism	168

5-2

THE CATABOLISM OF GLUCOSE 170

Glucose Contains Stored Energy That Can Be Extracted	170
Cellular Respiration Is a Series of Catabolic Pathways for the Production of ATP	171
Glycolysis Is the First Stage of Energy Extraction	171
The Krebs Cycle Extracts More Energy from Pyruvate	172
Oxidative Phosphorylation Is the Process by Which Most ATP Molecules Form	175

5-3

OTHER ASPECTS OF CATABOLISM 181

Other Carbohydrates Represent Potential Energy Sources	182
Energy Can Be Extracted from Proteins and Fats	182
Anaerobic Respiration Produces ATP Using Other Final Electron Acceptors	183
Fermentation Produces ATP Using an Organic Final Electron Acceptor	183

5-4

THE ANABOLISM OF CARBOHYDRATES	185
Photosynthesis Is a Process to Acquire Chemical Energy	186

5-5

PATTERNS OF METABOLISM	189
Autotrophs and Heterotrophs Get Their Energy and Carbon in Different Ways	189
Chapter Review	191
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

6 Bacterial Genetics 195

6.1

BACTERIAL DNA	196
The Bacterial DNA Is Tightly Packed within a Single Chromosome	197
Plasmids Carry Nonessential Information	199

6.2

DNA REPLICATION	201
DNA Replication Is Semiconservative	201
DNA Synthesis Progresses from the Origin of Replication	201

6.3

PROTEIN SYNTHESIS	203
The Central Dogma Identifies the Flow of Genetic Information	203
Transcription Copies Genetic Information into RNA	203
Three Types of RNA Result from Transcription	204
Translation Is the Process of Making the Protein	207
Protein Synthesis Can Be Controlled In Several Ways	209

6.4

BACTERIAL MUTATION	214
Spontaneous Mutations Are the Result of Natural Processes	214
Induced Mutations Are Deliberate Mutations Resulting From a Mutagen	215
Point Mutations Affect One Base Pair in a Gene	216
Repair Mechanisms Attempt to Correct Mistakes or Damage in the DNA	218
Transposable Genetic Elements Can Cause Mutations	220

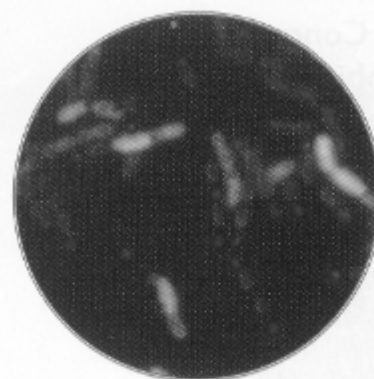

6.5

IDENTIFYING MUTANTS	223
Plating Techniques Select for Specific Mutants or Characteristics	223
The Ames Test Can Identify Potential Mutagens	223
Chapter Review	226
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

7 Genetic Engineering and Bacterial Genomics 230

7.1

BACTERIAL RECOMBINATION	231
-------------------------	-----

Genetic Information in Bacteria Can Be Transferred Vertically and Laterally	231
Transformation Is the Uptake and Expression of DNA in a Recipient Cell	232
Conjugation Involves Cell-to-Cell Contact for DNA Transfer	236
Conjugation Also Can Transfer Chromosomal DNA	238
Transduction Involves Viruses in the Transfer of DNA	241

7.2

GENETIC ENGINEERING	247
Genetic Engineering Was Born in the 1970s	247
Human Genes Can Be Cloned in Bacteria	250
Genetic Engineering Has Many Commercial and Practical Applications	251

7.3

MICROBIAL GENOMICS	259
Many Microbial Genomes Have Been Sequenced	259
Microbial Genomics Has Produced Some Interesting Findings	259
Microbial Genomics Will Advance Our Understanding of the Microbial World	262
Microbial Genomics Is Only Part of a Genetic Process	264
Chapter Review	265
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

PART THREE

BACTERIAL DISEASES OF HUMANS 270

8 Airborne Bacterial Diseases 273

8.1

DISEASES OF THE UPPER RESPIRATORY TRACT	274
Streptococcal Diseases Can Be Mild to Severe	274
Diphtheria Is a Deadly, Toxin-Caused Disease	277
Pertussis (Whooping Cough) Is Highly Contagious	279
Meningococcal Meningitis Can Be Life-Threatening	280
<i>Haemophilus</i> Meningitis Had Been Prevalent in Preschool Children	281

8.2

DISEASES OF THE LOWER RESPIRATORY TRACT	284
Tuberculosis Is Primarily a Disease of the Lungs	284
Pneumococcal Pneumonia Primarily Affects the Elderly	289
Primary Atypical Pneumonia Is Spread by Close Contact	290
<i>Klebsiella</i> Pneumonia Is a Hospital-Acquired Infection	292
<i>Serratia</i> Pneumonia also Is a Hospital-Acquired Infection	292
Legionnaires' Disease (Legionellosis) Has a Mortality Rate of 15 to 20 Percent	293
Q Fever Results from Breathing the Airborne Particles	296
Psittacosis and Chlamydial Pneumonia Are Airborne Diseases	298
Chapter Review	302
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

9 Foodborne and Waterborne Bacterial Diseases 307

9.1

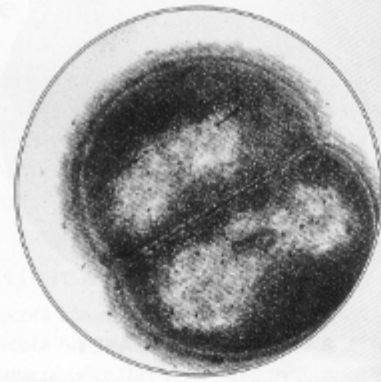

INTRODUCTION TO FOODBORNE & WATERBORNE BACTERIAL DISEASES	309
Foodborne and Waterborne Diseases Follow a Course of Intoxication or Infection	309
There Are Several Ways Foods or Water Become Contaminated	310

9.2

FOODBORNE AND WATERBORNE INTOXICATIONS	310
Botulism Is Caused By an Exotoxin in Improperly Canned Foods	310
Staphylococcal Food Poisoning also Is Caused by an Exotoxin	313
Clostridial Food Poisoning Results from an Enterotoxin	314

9.3

FOODBORNE AND WATERBORNE INFECTIONS	315
Typhoid Fever Involves a Blood Infection	315
Salmonellosis Can Be Contracted From a Variety of Foods	318
Shigellosis (Bacterial Dysentery) Occurs Where Sanitary Procedures Are Lacking	320
Cholera Can Involve Enormous Fluid Loss	321
<i>E. coli</i> Diarrheas Cause Various Forms of Gastroenteritis	324
Peptic Ulcer Disease Can Be Spread Person To Person	326
Campylobacteriosis Most Often Results From Consumption of Contaminated Poultry	329
Listeriosis Comes from Fecal-Contaminated Foods	330
Brucellosis Is Rare in the United States	331
Other Bacteria Can Cause Foodborne and Waterborne Diseases	332
Chapter Review	338
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

10 Soilborne and Arthropodborne Bacterial Diseases 343

10.1

SOILBORNE BACTERIAL DISEASES	344
Anthrax Produces Three Exotoxins	344
Tetanus Produces Hyperactive Muscle Contractions	346
Gas Gangrene Causes Massive Tissue Damage	348
Leptospirosis Causes Fever and Headache	349
Melioidosis Occurs in Two Forms	351

10.2

ARTHROPODBORNE BACTERIAL DISEASES	352
Bubonic Plague Can Be a Highly Fatal Disease	352
Tularemia Has More Than One Disease Presentation	356
Lyme Disease Can Be Divided into Three Stages	356
Relapsing Fever Is Carried By Ticks and Lice	361

10.3

RICKETTSIAL ARTHROPODBORNE DISEASES	363
Rocky Mountain Spotted Fever Begins with a Characteristic Rash	364
Epidemic Typhus Produces a Potentially Fatal Illness	364
Endemic Typhus Is Transmitted by Infected Fleas	366
Other Rickettsiae also Cause Disease	366
Chapter Review	370
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

11 Sexually Transmitted, Contact, and Miscellaneous Bacterial Diseases 376

11.1

SEXUALLY TRANSMITTED DISEASES	377
Syphilis Can Progress Through Three Stages if Untreated	377
Gonorrhea Is an Infection of the Urogenital Tract	379
Chlamydial Urethritis Can Be Asymptomatic	382
Ureaplasma Urethritis Produces Mild Symptoms	385
Chancroid Causes Painful Genital Ulcers	386
Other Sexually Transmitted Diseases also Exist	386

**11.2****CONTACT BACTERIAL DISEASES 390**

- Leprosy (Hansen's Disease) Is a Chronic, Systemic Infection 390
- Staphylococcal Skin Diseases Have Several Manifestations 392
- Toxic Shock Syndrome Is a Disease Caused by Exotoxin Release 394
- Trachoma Can Lead to Blindness 395
- Bacterial Conjunctivitis (Pinkeye) Is Very Common 396
- Yaws Is Spread Person to Person 397

11.3**MISCELLANEOUS BACTERIAL DISEASES 398**

- There Are Several Endogenous Bacterial Diseases 398
- Two Fungal-like Bacterial Diseases Exist 399
- Animal Bite Diseases Occasionally Occur 400
- Oral Diseases Arise from Bacteria Normally Found in the Mouth 401
- Urinary Tract Infections Are More Common in Women 405
- Nosocomial Diseases Are Acquired in a Health Care Setting 407
- Chapter Review 412
- Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review

PART 4**OTHER MICROORGANISMS 418****12 The Viruses and Virus-like Agents 421****12.1****FOUNDATIONS OF VIROLOGY 422**

- Many Scientists Contributed to the Early Understanding of Viruses 423

12.2**THE STRUCTURE OF VIRUSES 427**

- Viruses Occur in Various Shapes 428
- Viruses Lack Cellular Structure 428
- Virus Structure Determines Host Range and Specificity 430

12.3**THE REPLICATION OF VIRUSES 432**

- The Replication of Bacteriophages Is a Five-Step Process 432
- Animal Virus Replication Has Similarities to Phage Replication 435
- Some Animal Viruses Can Exist As Proviruses 438

12.4**OTHER CHARACTERISTICS OF VIRUSES 440**

- Nomenclature and Classification Do Not Use Conventional Taxonomic Groups 440
- Cultivation and Detection of Viruses Are Critical to Virus Identification 441
- Synthetic Drugs Can Inhibit Virus Replication 445
- Interferon Puts Cells in an Antiviral State 447
- Viral Vaccines Offer the Best Protection Against Infection 450
- Physical and Chemical Agents Can Inactivate Viruses 450

12.5**VIRUSES AND CANCER 452**

- Cancer Is an Uncontrolled Growth of Cells 452
- Viruses Are Responsible for 20 Percent of Human Cancers 453
- Oncogenic Viruses Transform Infected Cells 455

12.6**EMERGING VIRUSES AND VIRUS EVOLUTION 458**

- Genetic Recombination and Mutation Create New Viruses 459
- The Environment and Social Conditions Can Produce New Viruses 459
- There Are Three Hypotheses for the Origin of Viruses 460

12.7**VIRUS-LIKE AGENTS 461**

- Viroids Are Infectious RNA Particles 461
- Prions Are Infectious Proteins 461
- Chapter Review 465
- Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review

13 Pneumotropic and Dermotropic Viral Diseases 469**13.1****PNEUMOTROPIC VIRAL DISEASES 471**

- Influenza Is a Highly Communicable Disease 471
- Adenovirus Infections Often Are Responsible for Colds 476
- Respiratory Syncytial Disease Affects the Lower Respiratory Tract in Young Children 477
- Parainfluenza Accounts For 40 Percent of Acute Respiratory Infections in Children 477
- Rhinovirus Infections Produce Inflammation in the Upper Respiratory Tract 478
- Severe Acute Respiratory Syndrome (SARS) Spreads through Close Person-to-Person Contact 480

13.2**DERMOTROPIC VIRAL DISEASES 483**

- Herpes Simplex Are Widespread, Often Recurrent Infections 483
- Other Herpesvirus Infections Have Been Detected Recently 487
- Chickenpox (Varicella) Is a Common, Highly Contagious Disease 487
- Measles (Rubeola) Is Another Highly Communicable Disease 489

Rubella (German Measles) Is an Acute but Mildly Infectious Disease	491
Fifth Disease (Erythema Infectiosum) Produces a Mild Rash	492
Mumps Is Spread by Respiratory Droplets	493

13-3

OTHER DERMOTROPIC DISEASES	494
Smallpox (Variola) Is a Contagious and Sometimes Fatal Disease	494
Monkeypox Is a New Disease to the Western Hemisphere	497
Molluscum Contagiosum Forms Mildly Contagious Skin Lesions	500
Warts or Cervical Cancer Can Be Produced by Papilloma Viruses	500
Kawasaki Disease Is the Leading Cause of Childhood Heart Disease	500
Chapter Review	502
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

14 Viscerotropic and Neurotropic Viral Diseases 507

14.1

VISCEROTROPIC VIRAL DISEASES	509
Yellow Fever Is Transmitted by Mosquitoes	509
Dengue Fever Can Progress to a Hemorrhagic Fever	511
Infectious Mononucleosis Is Most Common in Children and Young Adults	512
Hepatitis A Is Transmitted Most Often by the Fecal-Oral Route	514
Hepatitis B Can Produce a Chronic Liver Infection	517
Hepatitis C Often Causes Cirrhosis and Liver Failure	518
Other Viruses Also Cause Hepatitis	520

14.2

OTHER VISCEROTROPIC VIRAL DISEASES	521
Viral Gastroenteritis Is Caused by Any of Several Viruses	521
Viral Fevers Can Be Caused by a Variety of Viruses	525
Hantavirus Pulmonary Syndrome Produces Sudden Respiratory Failure	527
Cytomegalovirus Disease Can Produce Serious Birth Defects	528
Acquired Immune Deficiency Syndrome Results from Immune System Dysfunction	530

14.3

NEUROTROPIC VIRAL DISEASES	537
Rabies Is a Highly Fatal Infectious Disease	537
Polio May Be the Next Infectious Disease Eradicated	539
Arboviral Encephalitis Is Caused By Blood-Sucking Arthropods	543
West Nile Fever Is an Emerging Disease in the Western Hemisphere	545
Lymphocytic Choriomeningitis Follows Exposure to Rodent Feces	547
Chapter Review	548
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

15 The Fungi 555

15.1

CHARACTERISTICS OF FUNGI	556
Fungi Share a Combination of Characteristics	556
Fungal Growth Is Influenced By Several Factors	558
Reproduction in Fungi Involves Spore Formation	561

15.2

THE CLASSIFICATION OF FUNGI	563
The Zygomycota Have Nonseptate Hyphae	564
The Ascomycota Are the Sac Fungi	565
The Basidiomycota Are the Club Fungi	569
The Deuteromycota Lack a Sexual Reproduction Phase	570
The Yeasts Are Microscopic, Unicellular Fungi	574

15.3

FUNGAL DISEASES OF HUMANS	578
Cryptococcosis Usually Occurs in Immunocompromised Individuals	578
Candidiasis Often Is a Mild, Superficial Infection	578
Dermatophytosis Is an Infection of the Body Surface	580
Histoplasmosis Can Produce a Systemic Disease	581
Blastomycosis Is Endemic in the Southeastern U.S.	583
Coccidioidomycosis Primarily Is a Respiratory Infection	583
<i>Pneumocystis</i> Pneumonia Causes Illness and Death within Immunosuppressed Individuals	584
Other Fungi also Can Cause Mycoses	585
Chapter Review	588
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

16 The Protozoa 594

16.1

CHARACTERISTICS OF PROTOZOA	595
Protozoa Contain Typical Eukaryotic Organelles	595
Most Protozoa Are Heterotrophs	597

16.2

THE CLASSIFICATION OF PROTOZOA	598
Amoebas Form Pseudopods	599
Flagellates Move by One or More Flagella	600
Ciliates Have Two Types of Nuclei	601
Apicomplexans (Sporozoans) Are Obligate Parasites	603

16.3

PROTOZOAL DISEASES CAUSED BY AMOEBAS AND FLAGELLATES	604
Amoebiasis Is the Second Leading Cause of Death from Parasitic Disease	604
Primary Amoebic Meningoencephalitis Is a Sudden and Deadly Infection	606
Giardiasis Occurs in an Estimated 5 Percent of American Adults	606
Trichomoniasis Affects over 10 Percent of Sexually Active Individuals	607
Trypanosomiasis Is Two Different Diseases	608
Leishmaniasis Is of Two Forms	612

16.4

PROTOZOAL DISEASES CAUSED BY CILIATES & APICOMPLEXANS (SPOROZOA) 615

Balantidiasis Is Contracted from Water or Food	615
Contaminated with Pig Feces	615
Toxoplasmosis Is One of the Most Common Infectious Diseases	615
Malaria Is Caused by Four Different Protozoal Species	618
Babesiosis Is Found in the Northeastern United States	621
Cryptosporidiosis Is Caused by a Highly Infectious Protozoan	622
Cyclosporiasis Develops after Eating Contaminated Fresh Produce	623
Chapter Review	626
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

17 The Multicellular Parasites 631

17.1

FLATWORMS	632
Flukes Use Snails as an Intermediate Host	633
Schistosomiasis Is Very Common Worldwide	633
Chinese Liver Fluke Disease Involves Two Intermediate Hosts	635
Other Flukes also Cause Human Disease	636
Tapeworms Are Flatworms That Live in the Host Intestines	637
Beef and Pork Tapeworm Diseases Usually Are Chronic but Benign	638
Fish Tapeworm Disease Results from Eating Undercooked Infected Freshwater Fish	639
A Few Other Tapeworms also Cause Disease	640

17.2

ROUNDWORMS	642
Pinworm Disease Is the Most Prevalent Helminthic Infection in the United States	643
Whipworm Disease Comes from Eating Food Contaminated with Parasite Eggs	643
Roundworm Disease Is Prevalent in the American South	645
Trichinosis Occurs Worldwide	645
Hookworm Disease Is an Infection of the Upper Intestine	646
Strongyloidiasis Is a Parasitic Intestinal Infection	648
Filariasis Is a Lymphatic System Infection	649
Guinea Worm Disease Causes Skin Ulcers	649
Eyeworm Disease Occurs in the Rain and Swamp Forests of Africa	650
Chapter Review	652
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

PART FIVE**DISEASE AND RESISTANCE 656****18 Infection and Disease 659**

18.1

THE HOST-PARASITE RELATIONSHIP	660
The Human Body Is Host to its Own Microbiota	660
Pathogens Differ in Their Ability to Cause Disease	663
Diseases Progress through a Series of Stages	666
Diseases Are Transmitted by Direct or Indirect Means	668
Reservoirs Represent Sources of Disease Organisms	670
Diseases Can Be Described by Their Behavior or Occurrence in a Population	671
Diseases Can Be Classified by Severity or Host Involvement	673

18.2

THE ESTABLISHMENT OF DISEASE	676
Pathogens Enter and Leave the Host through Portals	676
Disease Onset Is Influenced by the Number of Invading Pathogens	678
Most Pathogens Must Penetrate Host Tissues	679
Adhesins Are Important Virulence Factors	681
Enzymes Can Increase the Virulence of a Pathogen	684
Toxins Are Poisonous Virulence Factors	687

18.3

THE HUMAN CIRCULATORY AND LYMPHATIC SYSTEMS	689
Blood Consists of Three Major Components	690
The Lymphatic System Has Three Functions	692
Chapter Review	695
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

19 Resistance and the Immune System 699

19.1

NONSPECIFIC RESISTANCE	700
There Are Broad Types of Nonspecific Resistance	701
Mechanical and Chemical Barriers Are the First Defenses Against Infection	702

Phagocytosis Represents Part of a Second Line of Nonspecific Defenses	703
Inflammation Plays an Important Role in Fighting Infection	707
Moderate Fever Is Beneficial to Host Defenses	709
Natural Killer Cells Recognize and Kill Abnormal Cells	709
Complement Marks Pathogens for Destruction	709

19.2

SPECIFIC RESISTANCE AND THE IMMUNE SYSTEM	711
Antigens Stimulate an Immune Response	712
The Immune System Originates from Groups of Stem Cells	714
T and B Cells Have Receptors to Recognize Antigens	716
Cell-Mediated Immunity Is a Response by Antigen-Specific T Lymphocytes	717
Antibody-Mediated (Humoral) Immunity Is a Response Mediated by Antigen-Specific B Lymphocytes	722
Antibodies Recognize Specific Epitopes	726
There Are Five Immunoglobulin Classes	727
Antibody Diversity Is a Result of Gene Rearrangement	729
Antibody Interactions Mediate the Disposal of Antigens (Pathogens)	730
Can Thinking "Well" Keep You Healthy?	733
Chapter Review	737
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

20 Immunity and Serology 742

20.1

IMMUNITY TO DISEASE	743
Naturally Acquired Active Immunity Develops from Exposure to an Infectious Agent	745
Artificially Acquired Active Immunity Is Established by Vaccination	745
Naturally Acquired Passive Immunity Comes from Acquiring Maternal Antibodies	751
Artificially Acquired Passive Immunity Is Produced from the Injection of Antisera	752
Herd Immunity Results from Effective Vaccination Programs	753
Do Vaccines Have Dangerous Side Effects?	755

20.2

SEROLOGICAL REACTIONS	757
Serological Reactions Have Certain Characteristics	757
Neutralization Involves Antigen-Antibody Reactions	758
Precipitation Requires the Formation of a Lattice between Soluble Antigen and Antibody	759
Agglutination Involves the Clumping of Antigens	760
Flocculation Requires Aggregate Formation within a Precipitate	762

20.3

OTHER SEROLOGICAL REACTIONS	763
Complement Fixation Can Detect Antibodies to a Variety of Pathogens	763
Fluorescent Antibody Techniques Can	

Identify Unknown Antigens (Pathogens)	765
Radioimmunoassay (RIA) Is Used to Quantitate Antigen-Antibody Complexes	766
The Enzyme-Linked Immunosorbent Assay (ELISA) Can Detect Antigens or Antibodies	768
Monoclonal Antibodies Are Produced by a Single Clone of B Cells	771
Gene Probes Are Single-Stranded DNA Segments	773
Chapter Review	776
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

21 Immune Disorders 780

21.1

TYPE I IGE-MEDIATED HYPERSENSITIVITY	781
Type I Hypersensitivity Is Induced by Allergens	781
Systemic Anaphylaxis Is a Life-Threatening Condition	787
Atopic Diseases Represent a Localized Anaphylaxis	787
Why Do Only Some People Have Hypersensitivities?	789
Therapies Sometimes Can Control Type I Hypersensitivities	791

21.2

OTHER TYPES OF HYPERSENSITIVITY	793
Type II Cytotoxic Hypersensitivity Involves Antibody-Mediated Cell Destruction	793
Type III Immune Complex Hypersensitivity Is Caused by Antigen-Antibody Aggregates	798
Type IV Cellular Hypersensitivity Is Mediated by Antigen-Specific T Cells	801

21.3

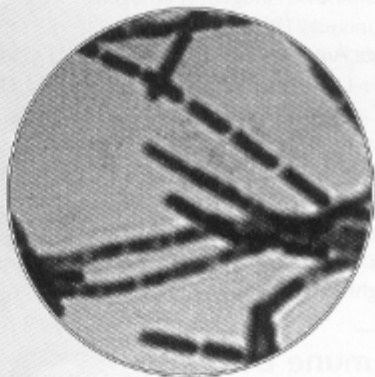

IMMUNE DEFICIENCY DISEASES	805
Immune Deficiencies Can Involve Any Aspect of the Immune System	805

21.4

TRANSPLANTATION IMMUNOLOGY	808
There Are Four Types of Grafts (Transplants)	808
The Major Histocompatibility Complex Is Involved with Transplant Rejection	810
Antirejection Mechanisms Bring About Immunosuppression	811

21.5

TUMOR IMMUNOLOGY	812
An Immune Response Can Be Directed Against Tumor Cells	812
Immunotherapy Attempts to Augment and Enhance Natural Immune Defenses	813
Chapter Review	816
Note to the Student • Summary of Key Concepts • Questions for Thought and Discussion • Review	

**PART 6****CONTROL OF MICROORGANISMS 820****22 Physical Control of Microorganisms 823****22.1**

PHYSICAL CONTROL WITH HEAT	825
The Direct Flame Represents a Rapid Sterilization Method	827
The Hot-Air Oven Uses Dry Heat	828
Boiling Water Involves Moist Heat	829
The Autoclave Uses Moist Heat and Pressure	829
Fractional Sterilization Uses Free-Flowing Steam	833
Pasteurization Does Not Sterilize	833
Hot Oil Can Sterilize Instruments	835

22.2

PHYSICAL CONTROL BY OTHER METHODS	836
Filtration Traps Microorganisms	836
Ultraviolet Light Can Be Used to Control Microbial Growth	838
Other Types of Radiation Also Can Sterilize Materials	839
Ultrasonic Vibrations Disrupt Cells	841
Preservation Methods Retard Spoilage by Microorganisms	842
Chapter Review	845
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

23 Chemical Control of Microorganisms 849**23.1**

GENERAL PRINCIPLES OF CHEMICAL CONTROL	851
Disinfection Can Be Viewed in Different Ways	852
Antiseptics and Disinfectants Have Certain Properties	854
Antiseptics and Disinfectants Can Be Evaluated for Effectiveness	855

23.2

IMPORTANT CHEMICAL AGENTS	856
Halogens Oxidize Proteins	858
Phenol and Phenolic Compounds Denature Proteins	859
Heavy Metals Interfere with Microbial Metabolism	861
Alcohols Denature Proteins and Disrupt Membranes	863

23.3

OTHER CHEMICAL AGENTS	864
Aldehydes Inactivate Proteins and Nucleic Acids	864
Ethylene Oxide and Other Gases React with Proteins	866
Hydrogen Peroxide Damages Cellular Components	867
Some Detergents React with Membranes	867
Some Dyes Can Interfere with Cell Wall Structure or DNA	868
Acids Enhance Chemical Effectiveness	869
Chapter Review	873
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

24 Chemotherapeutic Agents and Antibiotics 877**24.1**

CHEMOTHERAPEUTIC AGENTS	878
The History of Chemotherapy Starts with Paul Ehrlich	879
Sulfanilamide and Other Sulfonamides Interfere with Metabolic Reactions	880
Other Chemotherapeutic Agents Have a Variety of Actions	882

24.2

ANTIBIOTICS	884
The Discovery of Antibiotics Began with Fleming	884
Penicillin Inhibits Bacterial Cell Wall Synthesis	886
A Large Group of Semisynthetic Penicillins Has Been Developed	888
Cephalosporins also Inhibit Cell Wall Synthesis	888
Aminoglycosides Inhibit Protein Synthesis	889
Chloramphenicol also Inhibits Translation	891

24.3

OTHER ANTIBIOTICS	892
Tetracyclines Are Another Group of Drugs That Affect Protein Synthesis	892
Other Antibiotics Have a Variety of Effects	893
Antifungal Antibiotics Can Produce Toxic Side Effects	895
Antiviral Agents Inhibit the Viral Replication Cycle	897
New Approaches to Antibiotic Therapy Are Needed as Resistance Increases	897

24.4

ANTIBIOTIC ASSAYS AND RESISTANCE	903
There Are Several Antibiotic Susceptibility Assays	903
There Are Four Mechanisms of Antibiotic Resistance	904
Antibiotics Have Been Misused and Abused	905
Chapter Review	907
Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review	

PART 7**MICROBIOLOGY AND PUBLIC HEALTH****912****25 Microbiology of Foods****915****25.1****FOOD SPOILAGE****916**

- Several Conditions Determine if Spoilage Can Occur 917
- The Chemistry of Spoilage Produces Specific Products 919
- Meats and Fish Can Be Contaminated in Several Ways 920
- Poultry and Eggs Can Spoil Quickly 921
- Breads and Bakery Products Can Support Bacterial and Fungal Growth 921
- Some Grains Are Susceptible to Spoilage 923
- Milk and Dairy Products Sometimes Sour 923

25.2**FOOD PRESERVATION****925**

- Heat Denatures Proteins 926
- Low Temperatures Slow Microbial Growth 929
- Drying Removes Water 931
- Osmotic Pressure Can Help Preserve Foods 931
- Chemical Preservatives Are Found in or Are Added to Many Foods 931
- Radiation Can Sterilize Foods 933
- Foodborne Disease Can Result from an Infection or Intoxication 934
- HACCP Systems Attempt to Identify Potential Contamination Points 937

25.3**FOODS FROM MICROORGANISMS****939**

- Many Foods Are Fermented Products 939
- Sour Milk Products Are the Result of Fermentation 942
- Cheese Production Involves a Variety of Microorganisms 943
- Chapter Review 945
- Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review

26 Environmental Microbiology**949****26.1****WATER POLLUTION****950**

- Unpolluted and Polluted Water Contain Very Different Microbial Populations 951
- There Are Three Types of Water Pollution 953
- Diseases Can Be Transmitted by Water 954

26.2**THE TREATMENT OF WATER AND SEWAGE****957**

- Water Purification Is a Three-Step Process 957

- Sewage Treatment Can Be a Multistep Process 958
- Biofilms Are Prevalent in the Environment 961
- The Bacteriological Analysis of Water Tests for Indicator Organisms 962

26.3**THE CYCLES OF ELEMENTS IN THE ENVIRONMENT****964**

- The Carbon Cycle Is Influenced by Microorganisms 965
- The Sulfur Cycle Recycles Sulfate Molecules 968
- The Nitrogen Cycle Is Dependent On Microorganisms 969
- Chapter Review 972
- Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review

27 Industrial Microbiology and Biotechnology**976****27.1****MICROORGANISMS IN INDUSTRY****977**

- Microorganisms Produce Many Useful Organic Compounds 978
- Microorganisms also Produce Important Enzymes and Other Products 979

27.2**ALCOHOLIC BEVERAGES****982**

- Beer Is Produced by the Fermentation of Malted Barley 983
- Wine Is Produced by the Fermentation of Fruit or Plant Extracts 984
- Distilled Spirits Are Produced by Concentrating the Alcohol from Fermentation 988

27.3**OTHER MICROBIAL PRODUCTS****988**

- Antibiotics Are Produced Commercially 989
- Some Microbial Products Can Be Used to Control Insects 990
- Other Products also Are Being Developed 992
- Bioremediation Helps Clean Up Pollution Naturally 992
- Industrial Genetic Engineering Continues to Make Advances 995
- Chapter Review 998
- Note to the Student · Summary of Key Concepts · Questions for Thought and Discussion · Review

- Appendix A: Metric Measurement A1
- Appendix B: Temperature Conversion Chart A1
- Appendix C: Answers to Selected Questions for Thought and Discussion A2
- Appendix D: Answers to Review Questions A12
- Appendix E: MicroInquiry Answers A16
- Glossary G1
- Index I1
