

BRIEF CONTENTS

1	Introduction to Molecular Genetics and Genomics	1
2	DNA Structure and DNA Manipulation	42
3	Transmission Genetics: The Principle of Segregation	88
4	Chromosomes and Sex-Chromosome Inheritance	134
5	Genetic Linkage and Chromosome Mapping	176
6	Molecular Biology of DNA Replication and Recombination	222
7	Molecular Organization of Chromosomes	260
8	Human Karyotypes and Chromosome Behavior	294
9	Genetics of Bacteria and Their Viruses	344
10	Molecular Biology of Gene Expression	398
11	Molecular Mechanisms of Gene Regulation	444
12	Genomics, Proteomics, and Transgenics	500
13	Genetic Control of Development	550
14	Molecular Mechanisms of Mutation and DNA Repair	592
15	Molecular Genetics of the Cell Cycle and Cancer	642
16	Mitochondrial DNA and Extranuclear Inheritance	686
17	Molecular Evolution and Population Genetics	716
18	The Genetic Basis of Complex Inheritance	760
