Preface xvii

Foreword by Richard A. Gibbs xx

Chapter 1. Preparation of Difficult DNA Templates Using Seven Different Commercial Methods 1

Jan Kieleczawa, Tony Li, and Paul Wu

Materials and Methods 2

DNA Sequencing 4

Results and Discussion 5

Conclusions 12

Chapter 2. Isolation and Use of Bacterial and P1 Bacteriophage-Derived Artificial Chromosomes 15

Miguel A. Gama Sosa, Rita De Gasperi, and Gregory A. Elder

DNA Sequencing 16

Transfection into Cultured Cells 17

Animal Transgenesis 20

Plant Transgenesis and Transformation 21

Retrofitting of BAC and PAC DNAs 22

Future Directions 25

Conclusions 26

Chapter 3. Preparation of Genomic DNA from Animal Tissues 33

Gary E. Truett

Alkaline Lysis Protocols 33

Proteinase K Digestion 39

Isolation of High Molecular Weight DNA from Proteinase K Digests 40

Isolation of DNA from Proteinase K Digests without Organic Solvents 41

Isolation of Genomic DNA with Guanidinium Salts 42

Isolation of Fetal DNA from Maternal Blood 43

Preparation of Genomic DNA for In Silico Hybridization 44

Chapter 4. Extraction of Genomic DNA from Plant Tissues 47

Zhanguo Xin and Junping Chen

Plant Materials and Reagents 48

Plant Materials 48

viii DNA Sequencing II: Optimizing Preparation and Cleanup

Chemicals	48
Solutions and Buffers for the CTAB Method	48
Solutions and Buffers for the High-Throughput Method	49
Solutions and Buffers for the Commercial Kits	49
PCR Conditions	49
CTAB Method	49
Principle	49
Procedure	50
Advantages of the CTAB Method	51
Disadvantages of the CTAB Method	52
Commercial Kits for DNA Extraction from Plants	52
Principle	52
Advantages and Disadvantages of Commercial Kits	52
A Simple HTP DNA Extraction Method Suitable for PCR	54
Principle	54
Procedure	55
Advantages of the Simple High-Throughput Method	56
Disadvantages of the Simple HTP Method	57
Conclusions	58

Chapter 5. Preparation of cDNA Probes for DNA Microarrays 61

Peter R. Hoyt, Mitchel J. Doktycz, and Lois Tack

Materials and Methods	62
Reagents and Supplies	62
Instrument Description/Configuration	63
Plasmid Preparation	63
PCR Product Preparation	64
Gel Electrophoresis	65
DNA Quantitation	65
Sample Tracking	66
Microarray Production and Analysis	66
Results	67
Discussion	80

Chapter 6. Isolation of Nucleic Acids from Paraffin-Embedded Archival Tissues and Other Difficult Sources 85

Evgeny N. Imyanitov, Evgeny N. Suspitsin, Konstantin G. Buslov, Ekatherina Sh. Kuligina, Evgeniya V. Belogubova, Alexandr V. Togo, and Kaido P. Hanson

DNA Isolation	86
Summary of Our Experience	88
RNA Isolation	91
Summary of Our Experience	92

Protocols 92

Protocol 1. Preparation of DNA-Containing Lysates
from Formalin-Fixed Paraffin-Embedded Tissue
Sections 92

Protocol 2. Phenol-Chloroform Extraction of DNA from
Formalin-Fixed Paraffin-Embedded Tissue Sections 93

Protocol 3. Taq Polymerase-Driven Restoration of Partially
Degraded DNA from Formalin-Fixed Paraffin-Embedded
Tissue Sections 94

Protocol 4. RNA Extraction from Formalin-Fixed
Paraffin-Embedded Tissue Sections 94

Chapter 7. Comparison of Sequencing Data for DNAs Prepared Using TempliPhi Technology and Using Traditional Preparation Protocols 99

*Richard Sheldon, Lloydia Reynolds, Markryan Dwyer,
and Jan Kieleczawa*

Materials and Methods 100

DNA Isolation from Saturated Cultures 100

TempliPhi DNA Amplification 101

Characterization of DNA 101

DNA Sequencing 101

Results and Discussion 102

Media Effects on the DNA Quantity 102

Media Effects on a Phred Q ≥ 20 Score 103

Effects of Denaturation Temperature and Time on
Sequence Quality of TempliPhi-Derived DNA
Templates from Colonies 105

Summary 106

Chapter 8. Whole Genome Amplification Using the Multiple Displacement Amplification Reaction 109

Roger S. Lasken

A Brief History of Whole Genome Amplification Methods 111

Multiple Displacement Amplification 112

Laboratory Protocols for Whole Genome Amplification with
MDA 114

Sources of DNA Templates 114

MDA Reaction Protocols 117

Required Reagents and Materials 117

Notes 118

Commercial Whole Genome Amplification Kits 119

Whole Genome Amplification Using Purified Genome
DNA: 50 μ L MDA Reaction Volume 119

Whole Genome Amplification from Blood or Cells:	
50 μ L MDA Reaction Volume	121
Troubleshooting Guide	122
Genomic DNA Protocol	123
Blood and Cell Protocol	123
Whole Genome Amplification from Other Biological	
Sample Types	124

Chapter 9. Solid-Phase Nucleic Acid Purification Using Magnetic Beads 127

Kevin McKernan and Erik Gustafson

Solid-Phase Nucleic Acid Purification	127
Advantages of Magnetic Bead Purification in a Large	
Scale Sequencing Pipeline	129
Throughput and Automation	129
Universal Applicability of Magnetic Bead-Based Pipelines	131
Description of SPRI Technologies	132
Critical Factors to Magnetic Bead-Based Assays	138
Selected Applications of SPRI Technology	138
Plasmid Purification	138
RNA Purification	139
Genomic DNA Isolation	148
Extending the Applications for SPRI: Bifunctional SPRI Beads	156
Endotoxin Removal	160
Summary	163
Materials and Methods	163

Chapter 10. The Sanger Institute High-Throughput Sequencing Pipeline 169

Anthony P. West, Christopher M. Clee, and Jane Rogers

Materials, Software, and Equipment	171
Software	172
Automation Pipelines	172
Liquid Handling Automation Equipment	175
Colony Picking Robots	175
Liquid Handling Robots	176
Protocol Development	179
Plasmid Isolation	181
Thermal Cycling	186
Labeled Sample Detection	192
Sample Tracking	193
Conclusion	196

Chapter 11. Comparison of PCR Product Clean-Up Methods for High-Throughput Capillary Electrophoresis 201

Darryl L. Irvin and Keith R. Mitchelson

Materials and Methods	202
Product Cleanup	203
Dilution (Diln)	203
Sephadex Cleanup (Seph)	203
Magnetic Bean Cleanup (MagB)	204
MgSO ₄ /Ethanol Cleanup (Mg/Eth)	205
Results	205
Discussion	214

Chapter 12. Evaluation of Methods for Cleanup of DNA Sequencing Reactions 219

Jan Kieleczawa and Katarzyna Bajson

Materials and Methods	220
DNA Sequencing	222
Result and Discussion	223
Clean-Up Procedures	223
Pre-Made Clean-Up Plates	223
In-House-Prepared Clean-Up Plates	225
Purification Using Magnetic Beads	227
Alcohol Precipitation Clean-Up Procedures	227
Stability of the Read Lengths and Signal Strength Over Time	230
Repetitive Use of the Same Filter Plate	231
Effects of Amount of DNA on Read Length and Signal Strength	231
First Correctly Called Base and Error Distribution	232
Dye-Terminator BigDye Dilution Limits	236
Conclusions	236

Chapter 13. Thermostable DNA Polymerases for a Wide Spectrum of Applications: Comparison of a Robust Hybrid TopoTaq to Other Enzymes 241

*Andrey R. Pavlov, Nadejda V. Pavlova, Sergei A. Kozyavkin,
and Alexei I. Slesarev*

Materials and Methods	242
Examples of the Enzyme Activities	000
Example 1: Comparison of Strand Displacement Activity of TopoTaq, AmpliTaq, and Stoffel Fragment	243
Example 2: Dye Terminator Cycle Sequencing Using TopoTaqSq	243

xii DNA Sequencing II: Optimizing Preparation and Cleanup

Example 3: PCR Amplification from G-C-Rich Templates
with TopoTaq DNA Polymerase 245

Example 4: PCR from Human Genomic DNA 247

Example 5: Specific PCR Using DNA Amplified with
Random Hexamer Primers 248

Example 6: Direct PCR DNA Amplification from
Bacterial Cultures with TopoTaq DNA Polymerase 245

Example 7: Production of Modified DNA with TopoTaq
DNA Polymerase by PCR Amplification 251

Discussion 255

Chapter 14. Prolonged Storage of Plasmid DNAs Under Different Conditions: Effects on Plasmid Integrity, Spectral Characteristics and DNA Sequence Quality 259

Jan Kieleczawa and Paul Wu

Materials 260

Methods 261

DNA Sequencing 261

Agarose Gel Electrophoresis 262

Spectral Analysis 263

Results and Discussion 263

Chapter 15. The DNA Book™: A New Method to Store and Distribute Genome Resources 275

Midori Kobayashi and Yoshihide Hayashizaki

DNABook™ Technology 276

Concept 276

Materials and Methods 279

Paper for DNA Printing 279

Plasmid Preparation 279

Polymerase Chain Reaction 279

Recovery of Spotted DNA 279

The Spotted DNA: Preservation of DNABooks 280

Manufacturing the DNABook 281

Printing the DNA 281

Trial Production 281

First DNA Sheet Published in *Genome Research* 281

Examples of DNABooks

Progress and Problems of DNABooks 286

Progress and Potential Applications of the DNABook 286

FTA® Technology 286

Future Considerations 288

Chapter 16. Assessing the Quantity, Purity, and Integrity of RNA and DNA Following Nucleic Acid Purification 291*William W. Willfinger, Karol Mackey, and Piotr Chomczynski*

Overview of the Instruments and Criteria Employed to Assess the Quality of Nucleic Acid Extracts 292

Assessment of Nucleic Acid Purity and Content by Spectrophotometric Methods: Theory and Assumptions 293

Nucleic Acid Quantitation 299

Nucleic Acid Integrity 302

An Additional Absorbance Measurement Improves Nucleic Acid Purity Assessment 303

Suitability of Spectrophotometric Absorbance Measurements for Evaluating Nucleic Acid Purity 305

Assessment of Nucleic Acid Extracts: Summary and Conclusions 308

Chapter 17. Essential Software and Other Tools Used in Modern Biology Laboratories 313*Jan Kieleczawa, Deven Atnoor, Russ Carmical, Andrew Hill, Fei Lu, Ken Paynter, and Paul Wu*

Determination of Quantity and Quality of DNA 314

EDAS 290 Imaging System 314

Databases to Store and Analyze DNA Information 322

Sequence Analysis Packages 324

Sequencher™: Software Overview 324

Mutation Surveyor™: Software Overview 324

SeqScape® Software: Overview 332

Vector NTI 335

DNASTAR 338

Sequence Repository Databases 339

Spotfire 343

Ingenuity Pathways Analysis 345

Other Tools 346

Index 354
