

Contents

	Preface	vii
	An Important Message About Safety	ix
Part I	Basic Laboratory Techniques and Skills	1
Exercise 1	Culture Transfer Techniques	5
	A. Aseptic Transfer Techniques	5
Exercise 2	Pure Culture Techniques	11
	A. Streak Plate Technique	11
	B. Pour Plate Technique	14
Part II	Microscopy and Bacterial Staining Techniques	21
Exercise 3	The Compound Microscope	23
	A. Parts of the Microscope and Their Use	23
	B. Observations of Prepared Slides	25
Exercise 4	Preparation of a Bacterial Smear and the Simple Stain Technique	35
	A. Preparation of a Bacterial Smear	35
	B. The Simple Stain Technique	38
Exercise 5	The Negative Stain Technique	43
Exercise 6	The Gram Stain Technique	49
Exercise 7	Bacterial Structures	55
	A. Spore Stain Technique	55
	B. Capsule Stain Technique	57
	C. Bacterial Motility	59
Part III	Viruses and Eukaryotic Microorganisms	65
Exercise 8	Viruses	67
	A. Constructing a Virus	67
	B. The Effect of Bacteriophages on Bacteria	68
	C. Plaque Formation	70
	D. Identification of Bacteriophages from Sewage	72
	E. Estimating the Number of Bacteriophages	72
Exercise 9	Fungi, Protozoa, and Multicellular Parasites	79
	A. Fungi (Molds and Yeasts)	79
	B. Protozoa and Multicellular Parasites	84
Part IV	The Spread and Control of Microorganisms	91
Exercise 10	A Simulated Epidemic	93
	A. Microbial Transmission via Fomites	93
	B. A Microbial Hunt	95
	C. Transmission of Microorganisms through Toilet Paper	97

Exercise 11	The Effect of Physical Agents on Bacteria	101
	A. Heat Tolerance 101	
	B. Ultraviolet Light 103	
	C. Drying 105	
	D. Other Physical Agents 106	
Exercise 12	The Effect of Chemical Agents on Bacteria	111
	A. Antiseptics and Disinfectants 111	
	B. Metals 113	
	C. Other Chemical Substances 114	
	D. Effect of Lysozyme on Bacteria 115	
	E. Disinfection of Drinking Water 116	
Exercise 13	Evaluation of Disinfectants and Antiseptics	125
	A. Effectiveness of Disinfectants on Inanimate Objects 125	
	B. Effectiveness of Disinfectants and Hand Washing on the Skin Surface 126	
	C. Mouthwashes and Oral Bacteria 127	
	D. The Phenol Coefficient 128	
Exercise 14	The Effect of Antibiotics on Bacteria	135
Exercise 15	Microbial Growth: Analysis of a Bacterial Growth Curve	145
	A. Bacterial Growth Dynamics 146	
	B. Plotting a Growth Curve and Determining the Generation Time 147	
Part V	Medical Microbiology	151
Exercise 16	The Genus <i>Mycobacterium</i>	153
	A. Colony and Cellular Morphology 153	
	B. Acid-Fast Stain Technique 154	
	C. Cold Acid-Fast Stain Technique 156	
Exercise 17	The Genus <i>Streptococcus</i>	159
	A. Streptococci from the Upper Respiratory Tract 159	
	B. Streptococci from the Oral Cavity 161	
Exercise 18	The Genus <i>Neisseria</i>	167
Exercise 19	The Genus <i>Staphylococcus</i>	171
	A. Isolation of Staphylococci 171	
	B. Differentiation between Staphylococci Species 173	
Exercise 20	The Enteric Bacteria	179
	A. Isolation of Enteric Bacteria 179	
	B. Differentiation of Enteric Bacteria on TSI Agar 180	
	C. The IMViC Series 182	
	D. Rapid Identification of Enteric Bacteria 183	
Exercise 21	The Genus <i>Bacillus</i>	191
Exercise 22	The Genus <i>Clostridium</i>	195
Exercise 23	The Genus <i>Lactobacillus</i>	201
	A. Isolation of Lactobacilli 201	
	B. Caries Susceptibility Test 202	

Part VI	Identification of a Bacterial Unknown	207
Exercise 24	Bacterial Structural Characteristics	213
Exercise 25	Bacterial Culture Characteristics	217
Exercise 26	Biochemical Characteristics of Bacteria	223
	A. Carbohydrate Fermentation	223
	B. Starch Digestion	224
	C. Catalase Production	226
	D. DNA Digestion	227
	E. Hydrogen Sulfide Production	228
	F. IMViC Series	229
	G. Urea Digestion	230
	H. Lipid Digestion	230
	I. Casein Digestion	231
Part VII	Bacterial Genetics and Serology	239
Exercise 27	Bacterial Genetics: Mutations and the Ames Test	241
	A. Gradient Plate Technique	242
	B. Mutagenic Effect of Ultraviolet Light	243
	C. DNA Repair of UV Light Damage	245
	D. The Ames Test	246
Exercise 28	Bacterial Conjugation	253
Exercise 29	Bacterial Transformation	259
Exercise 30	Serology: Agglutination Techniques and Blood Cell Identification	267
	A. Slide Agglutination	267
	B. Tube Agglutination	268
	C. Hemagglutination: Determination of Blood Type	270
	D. Blood Smear	272
Part VIII	Public Health and Environmental Microbiology	277
Exercise 31	Microbiology of Foods	279
	A. Food Preservation with Salt and Garlic	279
	B. Standard Plate Count of Food Products	280
	C. Fermentation of Sauerkraut	283
	D. Fermentation of Wine and Beer	284
Exercise 32	Microbiology of Milk and Dairy Products	293
	A. Standard Plate Count of Milk	293
	B. Coliform Plate Count of Milk	295
	C. Methylene Blue Reduction Test	296
	D. Preparation of Cheese	297
	E. Preparation of Yogurt	298
	F. Natural Bacterial Content of Milk	299
Exercise 33	Microbiology of Water	307
	A. Presumptive Test by the MPN Method	307
	B. Confirmed Test	308
	C. Completed Test	310
	D. Membrane Filter Technique	311
	E. Preparation of a Biofilm	312

Exercise 34	Microbiology of Soil	319
	A. Isolation of <i>Rhizobium</i> from Legume Roots	319
	B. Ammonification by Soil Microorganisms	320
	C. Isolation of <i>Streptomyces</i> from Soil	321
	D. Antibiotic Production by <i>Streptomyces</i>	321
	E. Plate Count of Soil Bacteria	323
	F. Microbial Ecology in the Soil—The Winogradsky Column	323
	G. Recycling of Carbon in Food	325
	H. Recycling of Carbon in Cloth	327
	I. Recycling of Carbon in Leaves	328
Appendix A	Preparation of Stains and Diagnostic Reagents	337
Appendix B	Using Enterotube® II	339
	Index	343
