Foreword	ix
Preface	xii
Acknowledgments	xv
Introduction	xvi
1 The Origins of Twenty-first-Century	
Biology	1
Plants, Animals, and Cells	2
Cell Biology and Medicine	6
Evolution, Genetics, and Mathematics	11
<i>The Failed Marriage between Evolution</i> <i>and Sociology</i>	20
Cell Biology, Chemistry, and Genes	23
Physics, Chemistry, and Genetics	29
Genetics, Embryology, and Evolution	34
The Rise of Genetic Engineering	41
Computers and Biology	44
2 Literature, Culture, and Social	
Perceptions of Science	52
<i>Frankenstein: or, The Modern Prometheus</i>	53
Evolution, Religion, and Schools	57
Eugenics and <i>Brave New World</i>	62
<i>The Shape of Humans to Come—</i> <i>the Transhumans of Patricia Piccinini</i>	69
<i>Silent Spring</i> and the Rise of Environmental Movements	72
Genetically Modified Crops and the Marketing of Science	75
Cloned Dinosaurs and Invaders from Space	83

3 Studying Life in the Post-Genome Era	87
Genotypes and Phenotypes	87
Genomic Technologies	91
Biodiversity and Metagenomics	97
<i>Metagenomics, Extremophiles, and the Search for Extraterrestrial Life</i>	100
Manipulating Genes	104
Imaging Molecules within Living Cells	110
The Digital Embryo	113
Imaging Bodies	118
 4 The Future of Humanity and the World	 123
Designer Babies and a Post-Human Future	124
Curing Brain Diseases and the New Pharmacology	129
<i>Cures from Shamans and Traditional Healers</i>	136
Consciousness and the Brain	140
The Quest for Eternal Youth and Immortality	145
Saving the World: Ants, Humans, and the Fate of the Earth	151
 Chronology	 159
Glossary	172
Further Resources	179
Index	196
