
Contents

Chapter 1	Basic Concepts of Systems Biology	1
<i>Andrzej K. Konopka</i>		
Chapter 2	Understanding through Modeling — A Historical Perspective and Review of Biochemical Systems Theory as a Powerful Tool for Systems Biology	27
<i>Eberhard O. Voit and John H. Schwacke</i>		
Chapter 3	Thermostatics: A Poster Child of Systems Thinking	83
<i>Peter Salamon, Anna Salamon, and Andrzej K. Konopka</i>		
Chapter 4	Friesian Epistemology	93
<i>Kelley L. Ross</i>		
Chapter 5	Reconsidering the Notion of the Organic	101
<i>Robert E. Ulanowicz</i>		
Chapter 6	The Metaphor of “Chaos”	115
<i>Włodzimierz Klonowski</i>		
Chapter 7	Biological Complexity: An Engineering Perspective	139
<i>Stephen W. Kercel</i>		
Chapter 8	The von Neumann’s Self-Replicator and a Critique of Its Misconceptions	179
<i>Stephen W. Kercel</i>		
Chapter 9	The Mathematical Structure of Thermodynamics	207
<i>Peter Salamon, Bjarne Andresen, James Nulton, and Andrzej K. Konopka</i>		
Appendix	Systems Biology: A Dictionary of Terms	223
Index		241
