Chapter 1 Human and animal diseases: clinical symptoms, epidemiology, and neuropathology	1
1.1 Human diseases	1
1.2 Animal diseases	4
1.3 Variant CJD	5
1.4 Neuropathology	7
1.5 Concluding remarks	9
References	9
 Chapter 2 The infectious agent and the prion hypothesis	 13
2.1 Hypothesis for the infectious agent	13
2.2 Evidence supporting the prion hypothesis	16
2.3 Criticisms of the prion hypothesis	18
2.4 <i>In vitro</i> generation of prions	19
2.5 Concluding remarks	21
References	21
 Chapter 3 The prion protein: structure, conversion, and mechanism of propagation	 25
3.1 Structural features of the cellular and scrapie prion protein isoforms	25
3.2 Molecular mechanism of PrP ^C to PrP ^{Sc} conversion	27
3.3 Other factors involved in PrP conversion	30
3.4 Peptide models used to understand PrP structure and conversion ...	30
3.5 Concluding remarks	32
References	33
 Chapter 4 Cell biology, genetic and putative function of the normal prion protein	 37
4.1 Cellular biology of the normal prion protein	37
4.2 A signaling role for the prion protein?	39
4.3 PrP ^C ligands indicate a potential role in apoptosis	40
4.4 A putative role of PrP ^C in copper metabolism	41
4.5 PrP knockout animals and doppel	42

4.6	Concluding remarks.....	46
	References	46
Chapter 5 Prion strains, species barriers, and multiple conformations of the prion protein 51		
5.1	Prion strains.....	51
5.2	Species barrier	53
5.3	Multiple conformations of PrP ^{Sc}	56
5.4	Concluding remarks.....	57
	References	59
Chapter 6 From the mouth to the brain..... 63		
6.1	Prions in the gastrointestinal tract.....	63
6.2	The immune-system connection	65
6.3	From the lymphoid organs to the brain: peripheral nerves or blood-brain barrier?	67
6.4	Concluding remarks.....	68
	References	69
Chapter 7 Neurodegeneration in prion diseases 73		
7.1	Characteristics of brain degeneration	73
7.2	Is PrP ^{Sc} the cause of TSE neurodegeneration?.....	74
7.3	Mechanism of neuronal apoptosis.....	76
7.4	Neuronal apoptosis in TSEs involves the ER-stress pathway	78
7.5	A role for the proteasome in TSE pathogenesis?	79
7.6	Concluding remarks.....	80
	References	81
Chapter 8 The diagnosis problem and current tests..... 85		
8.1	Importance of early diagnosis	85
8.2	Difficulties of diagnosis	87
8.3	Current status of TSE diagnosis in humans	88
8.4	Postmortem detection of BSE in cattle.....	89
8.5	The need for detection of PrP ^{Sc} in blood	92
8.6	Novel approaches under development for premortem early diagnosis	93
8.6.1	Spectroscopic techniques	93
8.6.2	Conformational antibodies.....	95
8.6.3	PrP ^{Sc} concentration by binding to specific ligands	96
8.6.4	PrP ^{Sc} amplification	96
8.7	Concluding remarks.....	97
	References	97
Chapter 9 Therapeutic approaches 103		
9.1	Targets for TSE therapy	103
9.1.1	Reducing PrP expression	103

9.1.2	Blocking PrP-protein X interaction.....	104
9.1.3	Inhibiting the interaction between PrP ^C and PrP ^{Sc}	104
9.1.4	Preventing PrP ^C conversion	105
9.1.5	Reversing PrP ^{Sc} conformation.....	105
9.1.6	Enhancing PrP ^{Sc} clearance	105
9.1.7	Blocking PrP ^{Sc} toxicity.....	105
9.2	Compounds under development for TSE treatment.....	106
9.2.1	Congo red, anthracyclines, and tetracycline	107
9.2.2	Polyanions.....	107
9.2.3	Polyene antibiotics	108
9.2.4	Chlorpromazine and quinacrine	108
9.2.5	β -Sheet-breaker peptides	109
9.3	Immunization approach	110
9.4	Concluding remarks.....	110
	References	111

Chapter 10 Cyclic amplification of prion protein misfolding:

	rationale, applications, and perspectives.....	115
10.1	The rationale behind PMCA.....	115
10.2	Applications of PMCA in prion diagnosis	117
10.3	<i>In vitro</i> generation of infectious prions by PMCA.....	118
10.4	Application of PMCA to understand the prion replication process	119
10.5	Concluding remarks.....	121
	References	122

Chapter 11 Other diseases of protein misfolding

11.1	Protein misfolding and disease	125
11.2	Structural determinants of misfolding and aggregation	130
11.3	Mechanism and driving forces in protein misfolding and aggregation	131
11.4	Kinetics and intermediates of misfolding and aggregation	133
11.5	Interactions between misfolded proteins	134
11.6	Concluding remarks.....	135
	References	136

Chapter 12 Prions: a common phenomenon in biology?.....

12.1	The yeast prions.....	143
12.2	The inherent infectious nature of misfolded aggregates	146
12.3	Why are protein misfolding disorders other than TSE not infectious?	148
12.4	How common is the prion phenomenon in nature?	151
12.5	Concluding remarks.....	153
	References	154

	Index.....	159
