Chapter 1 Conserved Steps in Eukaryotic DNA Replication	1
<i>Xin Quan Ge and J. Julian Blow</i>	
1.1 Overview: the Biochemistry of DNA Synthesis	1
1.2 Where and When Does DNA Replication Take Place?	4
1.2.1 Cell Cycle Control	4
1.2.2 Origin Clusters and Replication Foci	7
1.2.3 The Replication Timing Programme	7
1.3 Origins of DNA Replication	8
1.4 Licensing of DNA for Replication	9
1.5 Initiation of DNA Replication	12
1.6 Elongation of Replication Forks	12
1.7 Termination of DNA Replication	14
1.8 Replication of Chromatin	14
1.9 Chromatid Cohesion and Segregation	15
Acknowledgements	15
References	16
Chapter 2 The Action of AAA+ ATPases in Loading Replication Factors	22
<i>Christian Speck and Jerzy Majka</i>	
2.1 Introduction	22
2.2 ORC Assembly at the Replication Origin	23
2.2.1 The DNA Replication Origin—a Binding Site for the Initiator ORC	23

Molecular Themes in DNA Replication

Edited by Lynne S. Cox

© Royal Society of Chemistry 2009

Published by the Royal Society of Chemistry, www.rsc.org

2.2.2	ORC is an AAA + Protein Complex	24
2.2.3	The Structure of ORC and the Clamp Loader RFC	25
2.3	Pre-RC Assembly	26
2.3.1	Regulation of ORC Assembly	26
2.3.2	ORC-DNA Interaction	27
2.3.3	Cdc6 Binds in a DNA Sequence-dependent Manner to ORC and Remodels the Complex	28
2.3.4	ORC and Cdc6 Cooperate to Load Cdt1-MCM2-7	29
2.3.5	A Model for Pre-RC Formation	31
2.4	RFC and Loading of PCNA	31
2.4.1	Structure of the RFC Complex	31
2.4.2	RFC Binding to DNA	32
2.4.3	Loading of PCNA by RFC	33
2.4.3.1	PCNA-RFC Complex	33
2.4.3.2	ATP Utilisation	35
2.4.3.3	Opening of the PCNA Ring	36
2.5	Outlook and Potential Applications	37
	Acknowledgements	38

Chapter 3 Ring Structures and Six-fold Symmetry in DNA Replication **47**

Lynne S. Cox and Stephen Kearsey

3.1	Introduction	47
3.2	Replicative Helicases	48
3.2.1	Identification of MCM Proteins	48
3.2.2	Structure and Biochemical Properties of MCM2-7: Analogies with Archaeal MCMs	48
3.2.3	AAA + ATPase Activity in MCM2-7	51
3.2.4	MCM2-7 Constitute the Replicative Helicase	51
3.2.5	Models for MCM2-7 Helicase Action	52
3.2.6	Regulation of MCM2-7 Helicase	54
3.2.6.1	Cell Cycle Regulation of MCM2-7 Loading at Replication Origins	55
3.2.6.2	Cell Cycle Regulation of MCM Activity	55
3.2.6.3	Inhibiting MCM Activity on DNA Damage	56
3.2.7	MCM8 and MCM9: AAA + Helicases	56
3.2.8	Hexameric MCM10 Acts in Replication Elongation	57

3.3	Non-replisome RecQ Helicases that Contribute to DNA Replication	58
3.3.1	WRN	59
3.3.2	BLM	62
3.4	The Sliding Clamp PCNA	62
3.4.1	PCNA Structure	62
3.4.2	PCNA Loading and Interaction with DNA	63
3.4.3	PCNA Interactions with Polymerases	64
3.4.4	PCNA Partners in Okazaki Fragment Processing	64
3.4.5	PCNA in Establishing Epigenetic Modifications during Replication	65
3.4.6	PCNA on DNA Damage	65
3.5	The 9-1-1 Damage Response Sliding Clamp	66
3.6	Perspective	67
	Acknowledgements	69
	References	69
Chapter 4	Mechanisms for High Fidelity DNA Replication	86
	<i>Stephanie A. Nick McElhinny, Zachary F. Pursell and Thomas A. Kunkel</i>	
4.1	General Organization of the Eukaryotic Replication Fork	86
4.2	Eukaryotic Polymerases Involved in Replication	88
4.2.1	Family B DNA Polymerases	88
4.2.2	Family Y DNA Polymerases	89
4.3	Structural Insights into Replication	90
4.3.1	Structures and Domains of Family B and Y Polymerases	90
4.3.2	Catalytic Mechanisms of Polymerization and Excision	90
4.3.3	Replication Machines	91
4.4	DNA Replication Fidelity	93
4.4.1	Base Substitution Error Rates	93
4.4.2	Mechanisms Controlling Nucleotide Selectivity	95
4.4.3	Indel Error Rates and Mechanisms for Indel Formation	98
4.4.4	Intrinsic Exonucleolytic Proofreading	99
4.4.5	Extrinsic Proofreading	101
4.4.6	Role of Accessory Proteins in DNA Replication Fidelity	102

4.5	Division of Labour during Leading and Lagging Strand Replication	102
4.6	Replication Fidelity and Human Health	103
	Acknowledgements	104
	References	104
Chapter 5	Coordination of Nucleases and Helicases during DNA Replication and Double-strand Break Repair	112
	<i>Martin E. Budd, Lynne S. Cox and Judith L. Campbell</i>	
5.1	Introduction	112
5.2	The Role of Nucleases in Okazaki Fragment Processing	113
5.2.1	FEN1	113
5.2.2	Dna2	116
5.2.3	FEN1, Dna2 and RPA Cooperate in OFP	116
5.2.4	DNA Polymerase δ Exonuclease Activity in OFP	117
5.2.5	Dual Mode OFP	118
5.2.6	Pif1 Helicase Regulates OFP	119
5.2.7	Flap Processing in OFP	120
5.2.8	Dna2 Helicase Activity in OFP	120
5.3	Mismatch Repair in DNA Replication: the Importance of Exo1	121
5.4	Nucleases and Helicases in Double-strand Break Repair	121
5.4.1	Mre11	122
5.4.2	Rad50	122
5.4.3	MRX/N Unwinding Creates a Substrate for MRX/N Nuclease Cleavage	123
5.4.4	Dna2 and Exo1 Can Compensate for Mre11 Nuclease in DSB Repair	126
5.4.5	MRN Recruits Effector Proteins to a DSB	127
5.4.6	Role of Mre11 and Sae2 in Downregulating the Damage Checkpoint	129
5.4.7	Other Nucleases in Checkpoint Regulation	131
5.5	Repair of Stalled Replication Forks	131
5.5.1	RecQ Helicases and Nucleases	131
5.5.2	Sgs1 Resolves Holliday Junctions at Stalled Forks	133
5.5.3	Mus81 Nuclease in OFP and Stalled Fork Resolution	134
5.5.4	RecQ Proteins Stabilise Stalled Replication Forks	135
5.5.5	Implications for Understanding Genome Instability in Human Disease	136

5.6	Nucleases and Helicases in Telomere Maintenance	136
5.6.1	Recruitment of Telomerase to the Telomere	137
5.6.2	Dna2, Exo1, and Sgs1 in Telomere Processing	137
5.6.3	Preferential Elongation of Short Telomeres	138
5.6.4	Inhibition of Telomerase by Helicases	139
5.7	Perspective	140
	References	140
Chapter 6	Molecular Hand-off Mechanisms in DNA Replication	156
	<i>Ellen Fanning, Xiaohua Jiang, Kun Zhao and Walter J. Chazin</i>	
6.1	Introduction	156
6.2	Primase to Polymerase Switching: Prokaryotic Paradigms	158
6.2.1	Lessons from <i>E. coli</i>	158
6.2.2	Hand-off Facilitates Replication Fork Restart After Fork Collapse	160
6.3	Structural Basis for RPA Action in Eukaryotic Hand-off	161
6.4	Eukaryotic Primase to Polymerase Switching	165
6.5	Molecular Hand-off in Loading the Processive Replicative DNA Polymerases	166
6.6	Dynamic Polymerase Exchange at the Replication Fork	170
6.7	Perspective	171
	Acknowledgements	171
	References	172
Chapter 7	Coping with DNA Damage and Replication Stress	178
	<i>Helle D. Ulrich</i>	
7.1	Introduction	178
7.2	The Sensing of DNA Damage and Replication Stress	179
7.2.1	Sensing of DNA Damage	180
7.2.1.1	Sensing of DNA Damage by Repair Systems	180
7.2.1.2	DNA Damage Checkpoints	181
7.2.2	Sensing of Replication Stress	183
7.2.2.1	Lesions that Cause Polymerase Blocks	184
7.2.2.2	Other Types of Lesions	185
7.2.2.3	Consequences of the Replication Checkpoint	185
7.3	DNA Damage Tolerance Mechanisms	186

7.3.1	Location and Timing of Damage Bypass	186
7.3.2	Translesion Synthesis	188
7.3.3	Structures and Properties of Damage-tolerant DNA Polymerases	188
7.3.3.1	Polymerase η (Pol η)	190
7.3.3.2	Polymerase ι (Pol ι)	192
7.3.3.3	Polymerase κ (Pol κ)	192
7.3.3.4	Rev1	193
7.3.3.5	Polymerase ζ (Pol ζ)	193
7.3.4	Cooperation between the Polymerases in TLS	194
7.3.5	Error-free Post-replication Repair	195
7.3.6	Regulation of DNA Damage Tolerance	195
7.3.6.1	PCNA Ubiquitylation by the RAD6 Pathway	196
7.3.6.2	Consequences of PCNA Ubiquitylation	198
7.3.6.3	Activation and Downregulation of PCNA-dependent Damage Tolerance	199
7.3.6.4	PCNA SUMOylation in <i>S. cerevisiae</i>	199
7.4	Replication Restart by Homologous Recombination	200
7.5	Outlook	202
	Acknowledgements	202
	References	202
Chapter 8	Telomeres and the End Replication Problem	217
	<i>Tracy M. Bryan</i>	
8.1	Introduction	217
8.2	Telomere Involvement in Senescence and Immortalisation	217
8.3	Structure and Stability of Telomeres	220
8.3.1	T-loops and the Shelterin Complex	220
8.3.1.1	Formation of T-loops	221
8.3.1.2	Protection of the 3' Telomeric Overhang	221
8.3.1.3	Protection from End-to-end Fusions	222
8.3.1.4	Protection from Homologous Recombination	222
8.3.1.5	Protection from a DNA Damage Response	222
8.3.1.6	Telomere Length Control	223
8.3.2	G-quadruplexes	223
8.4	ALT Pathways of Telomere Maintenance	226
8.4.1	Features of ALT	226
8.4.2	Evidence that ALT Involves Recombination	227

8.4.2.1	Recombination Proteins have been Shown to Play a Direct Role in ALT	227
8.4.2.2	Direct Evidence for Postreplicative Telomere Exchanges in ALT Cells	230
8.4.2.3	Recombination-dependent Extrachromosomal Telomeric Circles	230
8.4.2.4	Homologous Recombination is a Part of Normal Telomere Biology	230
8.4.3	Proposed Mechanisms of Recombination-mediated Telomere Lengthening	231
8.5	Telomerase: Structural and Biochemical Studies	232
8.5.1	Telomerase RNA (TER)	232
8.5.2	Telomerase Reverse Transcriptase (TERT)	236
8.5.3	Telomerase Ribonucleoprotein Complex	238
8.6	Telomerase-targeted Cancer Therapeutics	240
8.6.1	Oligonucleotides Targeting Telomerase RNA	240
8.6.2	Small Molecule Inhibitors	241
8.6.3	G-quadruplex Stabilising Molecules	242
8.7	Conclusions and Future Challenges	245
	Acknowledgements	245
	References	245
Chapter 9	Keeping Replicated Chromatids Together Until Mitosis	269
	<i>Christian H. Haering</i>	
9.1	Introduction	269
9.2	The Cohesin Complex	269
9.2.1	Structure of the Cohesin Complex	270
9.2.2	Models for Sister Chromatid Cohesion <i>via</i> Cohesin	272
9.3	Loading Cohesin onto Chromosomes	273
9.3.1	Role of the Smc1/Smc3 ATPases in Cohesin Loading	274
9.3.2	Structural Analysis of SMC ATPase Domains	274
9.3.3	Conformational Changes May Activate the SMC ATPase upon DNA Binding	276
9.3.4	How Might ATP Hydrolysis Open the Cohesin Ring?	276
9.3.5	The Scc2/Scc4 Cohesin Loading Factor	277
9.4	Establishment of Sister Chromatid Cohesion	278
9.4.1	Proteins Involved in Cohesion Establishment	278
9.4.2	Replication-dependent Establishment of Cohesion	278
9.4.3	DNA Double-strand Break-dependent Establishment of Cohesion	279

9.5	Destruction of Cohesion Triggers Chromosome Segregation	281
9.5.1	Separase Cleaves Scc1	283
9.5.2	Regulation of Separase Activity	283
9.5.3	A Separase-independent Pathway to Remove Cohesin from Vertebrate Chromosomes	284
9.6	Maintenance of Chromatid Stability during Segregation: Condensin	284
9.6.1	Association of Condensin with Chromosomes	286
9.7	Outlook	286

Chapter 12 DNA Replication in the Archaea: a Paradigm for Eukaryotic Replication **346**

Stephen D. Bell

12.1	Introduction	346
12.2	Archaeal Origins of Replication	347
12.2.1	Definition of Archaeal Replication Origins	348
12.2.2	Binding of Orc1/Cdc6 to Origins	348
12.3	The Archaeal Replicative Helicase—MCM	349
12.4	Replisome Processivity Complex	351
12.5	The Heterodimeric Archaeal Primase	351
12.6	Archaeal DNA Polymerases	352
12.7	Polymerase Accessory Factors	353
12.7.1	PCNA	353
12.7.2	Clamp Loader	354
12.8	Concluding Remarks	357
	Acknowledgements	358
	References	358

Chapter 13 DNA Replication in the Human Malaria Parasite and Potential for Novel Drug Development **363**

Ji-Liang Li

13.1	Introduction	363
13.2	Replication Initiation Proteins	365
13.2.1	PfORC	365
13.2.2	PfCDC6	372

13.2.3	PfCDT1	373
13.2.4	PfMCM	373
13.2.5	PfMCM8 and PfMCM9	374
13.3	Replication Elongation Proteins	376
13.3.1	PfRPA	376
13.3.2	DNA Polymerases	377
13.3.2.1	PfPol α	377
13.3.2.2	PfPol δ	378
13.3.2.3	PfPol ϵ	379
13.3.3	PfRFC	380
13.3.4	PfPCNA	381
13.3.5	PfFen1	381
13.3.6	PfRNase H	383
13.3.7	PfLigase I	383
13.4	Potential Targets for Novel Drug Development	384
13.4.1	Targeting Unique Replication Pathways: Apicoplast DNA Replication	384
13.4.2	Targeting Unique Protein Sequences	384
13.5	Concluding Remarks	385
	Acknowledgements	386
	References	386
Chapter 14	Drug Targets in DNA Replication	393
	<i>Alison D. Walters and James P.J. Chong</i>	
14.1	Introduction	393
14.1.1	Therapy	393
14.1.2	Prognosis and Diagnosis	394
14.2	Replication Initiation Factors—Markers or Targets?	395
14.2.1	MCMs	395
14.2.2	ORC and Cdc6	396
14.3	Targeting the Pre-initiation Complex	397
14.3.1	GIN5	397
14.3.2	Cdc45	400
14.3.3	Geminin and Cdt1	400
14.4	Replication Elongation Factors	402
14.4.1	PCNA	402
14.4.2	Ciz1	403
14.4.3	DNA Polymerases	403
14.4.4	RNase HI	404
14.4.5	Topoisomerases	406
14.5	Conclusions	406
	References	406
	Subject Index	414
