

Contents

Preface	ix
1 Defining the Experimental Program	1
2 The Hypothesis as a Framework for Scientific Projects: Is Critical Rationalism Critical?	7
3 Scientific Settings in Which a Hypothesis Is Not Practical	17
4 The Problem/Question as a Framework for Scientific Projects: An Invitation for Inductive Reasoning	21
5 What Constitutes an Acceptable Answer to an Experimental Question? ...	33
6 How Experimental Conclusions Are Used to Represent Reality: Model Building	35
7 Establishing a System for Experimentation	51
8 Designing the Experiment: Definitions, Time Courses, and Experimental Repeats	57
9 Validating a Model: The Ability to Predict the Future	67
10 Designing the Experimental Project: A Biological Example	75
11 Experimental Repetition: The Process of Acquiring Data to Model Future Outcomes	103
12 The Requirement for the Negative Control	117
13 The Requirement for the Positive Control	133
14 Method and Reagent Controls	149
15 Subject Controls	157
16 Assumption Controls	171
