
B R I E F C O N T E N T S

Preface	xxiii
Chapter 1: The Beginnings of Molecular Biology	1
Chapter 2: The Structure of DNA	17
Chapter 3: The Versatility of RNA	39
Chapter 4: Protein Structure and Folding	65
Chapter 5: Genome Organization and Evolution	91
Chapter 6: DNA Replication and Telomere Maintenance	117
Chapter 7: DNA Repair Pathways	159
Chapter 8: Recombinant DNA Technology and Molecular Cloning	185
Chapter 9: Tools for Analyzing Gene Expression	227
Chapter 10: Transcription in Bacteria	263
Chapter 11: Transcription in Eukaryotes	292
Chapter 12: Epigenetic Mechanisms of Gene Regulation	354
Chapter 13: RNA Processing and Post-Transcriptional Gene Regulation	403
Chapter 14: The Mechanism of Translation	451
Chapter 15: Genetically Modified Organisms: Use in Basic and Applied Research	479
Chapter 16: Genome Analysis: DNA Typing, Genomics, and Beyond	511
Chapter 17: Medical Molecular Biology	545
Glossary	582
Index	632
