PART I: PROCESSES IN AQUATIC ECOSYSTEMS, 1

1 Australian waters: diverse, variable and valuable, 3

- 1.1 The challenge for aquatic ecologists, 3
- 1.2 Defining some common terms, 6
- 1.3 Australian inland waters: their diversity and distribution, 6
- 1.4 The water regime: 'where, when and to what extent water is present', 7
 - 1.4.1 Water budgets, scale issues and human influences on water regimes, 7
 - 1.4.2 Components of the water regime, 8
 - 1.4.3 Water regime variability, 9
- 1.5 Linkages in aquatic ecosystems: from molecular bonds to global exchanges, 11
 - 1.5.1 Wonderful water and its molecular linkages, 11
 - 1.5.2 Linkages at the catchment scale, 12
 - 1.5.3 Linkages at the global scale: the hydrological cycle, 13
 - 1.5.4 Continental linkages and surface waters in Australia, 15
 - 1.5.5 Continental linkages and groundwaters in Australia, 19
- 1.6 The structure of this book, 20

2 Physical processes in standing waters, 21

- 2.1 Depth and physical processes, 21
- 2.2 Let there be light ..., 21
 - 2.2.1 Light reaching the water surface, 21
 - 2.2.2 Light below the water surface, 22
 - 2.2.3 Seeing through water: Secchi discs and quantum sensors, 24
- 2.3 The euphotic zone, 24

- 2.4 Light and life, 25
- 2.5 Temperature and stratification, 25
 - 2.5.1 Causes of stratification, 26
- 2.6 Using circulation patterns to classify standing waters, 27
- 2.7 Ecological implications of the different types of stratification and mixing, 29
- 2.8 Deep versus shallow standing waters: depth matters, 31
 - 2.8.1 How deep standing waters form, 32
 - 2.8.2 How shallow standing waters form, 32
- 2.9 Synthesis, 35

3 Chemical processes in standing waters, 37

- 3.1 'There's a certain chemistry ...', 37
- 3.2 Dissolved gases, 37
 - 3.2.1 Oxygen, 38
 - 3.2.2 Carbon dioxide, 41
 - 3.2.3 Hydrogen, 42
 - 3.2.4 Methane, 43
- 3.3 Sources of ions, 45
- 3.4 Ionic composition of Australian standing waters, 45
- 3.5 Conductivity, salinity and total dissolved solids, 45
- 3.6 Ionic composition and trophic state, 47
 - 3.6.1 Some common anions, 47
 - 3.6.2 Some common cations, 48
- 3.7 Redox reactions and redox potential, 50
- 3.8 Redox reactions and some common metals, 51
- 3.9 Nutrients, nutrient limitation and ecological stoichiometry, 52
 - 3.9.1 Phosphorus, 53
 - 3.9.2 Nitrogen, 55
 - 3.9.3 Carbon, 58
- 3.10 Water regime, drying and water chemistry, 60
 - 3.10.1 What happens to water chemistry during a wetting-drying cycle?, 60
- 3.11 Synthesis, 62

4 Biological processes in standing waters, 63

- 4.1 Biological players on a physical and chemical stage, 63
- 4.2 Major ecological zones and habitats, 64
- 4.3 Blurred boundaries and mobile assemblages, 66
- 4.4 Trophic groups and sources of energy, 66
- 4.5 Producers, 69
 - 4.5.1 An ecological classification of producers, 72
 - 4.5.2 Microscopic aquatic plants, 72
 - 4.5.3 Macroscopic aquatic plants, 74
 - 4.5.4 Plants living in water: benefits and constraints, 76
 - 4.5.5 Alternative states: changes in plant dominance in shallow waterbodies, 77
- 4.6 Consumers, 80
 - 4.6.1 Decomposers: the importance of microbes and fungi, 80
 - 4.6.2 Invertebrate detritivores, 81
 - 4.6.3 Invertebrate herbivores, 82
 - 4.6.4 Invertebrate carnivores, 83
 - 4.6.5 Vertebrate herbivores, 84
 - 4.6.6 Vertebrate carnivores, 85
 - 4.6.7 Predation and trophic cascades, 86
 - 4.6.8 Trophic cascades and biomanipulation, 87
 - 4.6.9 How vertebrates use waterbodies: linkages and subsidies, 87
- 4.7 Biological processes in temporary standing waters, 90
- 4.8 Biological processes in saline standing waters, 94
- 4.9 Synthesis, 95

5 Physical processes in running waters, 97

- 5.1 Flow and the diversity of running waters, 97
- 5.2 Scale, ecological hierarchies and networks, 97
- 5.3 A hierarchical classification of physical features, 99
 - 5.3.1 Physical features and channel flows, 101
- 5.4 Hydrology and stream flow, 103
 - 5.4.1 Measuring discharge, 103
 - 5.4.2 Measuring current velocity, 104

- 5.5 Hydrographs, catchment characteristics and groundwater interactions, 106
- 5.6 Flow variability and its implications, 108
- 5.7 The physical process of transport, 110
 - 5.7.1 The sources of sediment, 111
 - 5.7.2 Sediment particle size and distribution, 112
 - 5.7.3 Current velocity, erosion and transport, 113
 - 5.7.4 Sediment dynamics and channel form, 114
 - 5.7.5 Floodplain sedimentation and billabong formation, 115
- 5.8 River profiles and longitudinal changes in physical features, 118
- 5.9 Synthesis, 119

6 Chemical processes in running waters, 120

- 6.1 The complex web of factors, 120
- 6.2 Dissolved gases, 120
- 6.3 Ionic composition of Australian rivers, 123
- 6.4 Sources of ions, 124
- 6.5 Nutrients and nutrient spiralling, 126
 - 6.5.1 Transport and retention of nutrients, 128
- 6.6 Carbon and organic matter, 129
 - 6.6.1 Dissolved organic matter in rivers, 130
 - 6.6.2 Solute processes: dissolved substances in running waters, 132
- 6.7 Longitudinal changes in chemical features, 133
- 6.8 Synthesis, 135

7 Biological processes in running waters, 136

- 7.1 Factors affecting biological processes at various scales, 136
- 7.2 Zones and habitats: parallels and contrasts with standing waters, 136
- 7.3 Living with flow, 138
- 7.4 Sources of energy in running waters, 142
 - 7.4.1 Producers, 142
 - 7.4.2 The distribution of different life-forms of producers, 143
 - 7.4.3 Open-water producers in large rivers, 146
 - 7.4.4 Classifying consumers in running waters, 146

- 7.4.5 Invertebrate herbivores, 147
- 7.4.6 Invertebrate carnivores, 149
- 7.4.7 Vertebrate herbivores, 150
- 7.4.8 Vertebrate carnivores, 151
- 7.4.9 Decomposers, 154
- 7.4.10 Functional feeding groups, 157
- 7.5 The fate of a dead eucalypt leaf that falls into a stream ..., 158
- 7.6 Conceptual models of running-water ecosystems, 160
- 7.7 The role of disturbance, 163
 - 7.7.1 Post-disturbance recolonization processes, 164
 - 7.7.2 Recolonization, dispersal and biogeography in Australian running waters, 168
 - 7.7.3 Setting the biogeographic scene: ancient rocks, variable climates, 170
 - 7.7.4 Some biogeographic patterns in Australian inland waters, 170
- 7.8 Synthesis, 173

8 Groundwater processes and management, 174

- 8.1 Out of sight, out of mind?, 174
- 8.2 An integrated definition of groundwaters, 174
- 8.3 Physical processes in groundwaters, 176
 - 8.3.1 Groundwater discharge, permeability, porosity and Darcy's Law, 178
 - 8.3.2 Physical processes between groundwaters and surface waters, 180
 - 8.3.3 Groundwater temperature, 183
- 8.4 Chemical processes in groundwaters, 184
 - 8.4.1 Principal chemical processes in groundwater, 184
 - 8.4.2 Chemical processes along gradients of dissolved oxygen, 186
- 8.5 Biological processes in groundwaters, 187
 - 8.5.1 Groundwater microbiology, 188
 - 8.5.2 Buried treasures in Australia: groundwater invertebrates and fishes, 190
 - 8.5.3 Biodiversity and ecology of Australian groundwater fauna, 191

- 8.5.4 Physical, chemical and biological drivers of groundwater ecological processes, 193
- 8.5.5 Groundwater-dependent ecosystems (GDEs), 195
- 8.6 Management issues in Australian groundwaters, 197
- 8.7 Ecosystem services and conservation of Australian groundwaters, 201
- 8.8 Synthesis, 202

PART II: MANAGEMENT OF AQUATIC ECOSYSTEMS, 205

9 Management issues: water regime, 207

- 9.1 'When the well is dry ...', 207
- 9.2 Changes to water regimes by humans in Australia: a brief history, 207
 - 9.2.1 Changing water regime, changing processes, 210
- 9.3 Diverse impoundments with diverse effects, 211
 - 9.3.1 Impoundments as ecological barriers, 214
 - 9.3.2 Impoundments and estuaries, 215
- 9.4 Ecological effects of water extraction, 216
 - 9.4.1 Ecological effects of drainage and irrigation, 218
 - 9.4.2 Ecological effects of inter-basin transfers, 219
 - 9.4.3 Ecological effects of urbanization, 220
- 9.5 Water regimes and environmental watering, 221
 - 9.5.1 Environmental watering: ecological objectives and outcomes, 223
 - 9.5.2 Environmental watering: risks and tactics, 225
- 9.6 'Breaking down the barriers': fishways and dam removal, 226
- 9.7 Synthesis, 227

10 Management issues: physical features, 229

- 10.1 Changing physical features, changing processes, 229
- 10.2 Human activities and the physical environment, 230
 - 10.2.1 Human changes to catchments, 230
 - 10.2.2 Human changes to basins and channels, 232

- 10.3 Sedimentation: a physical process with negative fallout, 235
 - 10.3.1 Human activities and sedimentation, 236
 - 10.3.2 Ecological effects of sedimentation, 238
 - 10.3.3 Management of sedimentation, 239
- 10.4 Physical processes and land-water interfaces, 241
 - 10.4.1 Ecological roles of fringing and riparian zones, 241
 - 10.4.2 Threats to land-water interfaces, 243
 - 10.4.3 Management of land-water interfaces, 245
- 10.5 Recovering natural physical complexity, 248
- 10.6 Synthesis, 249
- 11 Management issues: water quality, 250**
 - 11.1 What is water quality?, 250
 - 11.2 Managing water quality, 250
 - 11.3 Eutrophication, 253
 - 11.3.1 Natural and anthropogenic eutrophication, 253
 - 11.3.2 Drivers, stressors and processes of eutrophication, 253
 - 11.3.3 Ecological impacts and effects on ecosystem services, 256
 - 11.3.4 Management of eutrophication, 258
 - 11.4 Salinization, 259
 - 11.4.1 Natural and anthropogenic salinization, 259
 - 11.4.2 Drivers, stressors and processes of salinization, 259
 - 11.4.3 Ecological impacts and effects on ecosystem services, 261
 - 11.4.4 Management of salinization, 262
 - 11.5 Acidification, 264
 - 11.5.1 Natural and anthropogenic acidification, 264
 - 11.5.2 Drivers, stressors and processes of acidification, 264
 - 11.5.3 Ecological impacts and effects on ecosystem services, 267
 - 11.5.4 Management of acidification, 268
 - 11.6 Pollution, 269
 - 11.6.1 Drivers, stressors and processes of pollution, 269
 - 11.6.2 Ecological impacts and effects on ecosystem services, 271
 - 11.6.3 Management of pollution, 273
 - 11.7 Water quality guidelines, 274
 - 11.8 Monitoring and assessing water quality, 275
 - 11.8.1 Condition monitoring, 275
 - 11.8.2 Detecting environmental impacts, 277
 - 11.9 Multiple stressors and models of ecosystem change, 277
 - 11.10 Synthesis, 279
- 12 Management issues: biodiversity conservation and climate change, 281**
 - 12.1 What is biodiversity and why does it need conservation?, 281
 - 12.1.1 Setting priorities in biodiversity conservation, 281
 - 12.2 Aquatic landscapes: networks and mosaics of habitats, 283
 - 12.3 Protected areas for conserving freshwater communities, 284
 - 12.4 Having good connections: dispersal and connectivity in conservation, 286
 - 12.5 Protecting refuges to conserve aquatic communities, 287
 - 12.6 Conserving aquatic species and populations, 288
 - 12.6.1 The special challenge of conserving species with complex life histories, 288
 - 12.6.2 The spatial extent of populations and metapopulations, 289
 - 12.6.3 What are 'Evolutionarily Significant Units'?, 289
 - 12.6.4 Hidden biodiversity: cryptic species, 290
 - 12.6.5 Endemic species and relictual faunas, 290
 - 12.7 Threatened communities and species, 291
 - 12.8 In the wrong place: 'exotic aquatics' and invasive species, 293
 - 12.8.1 Invasive predators and competitors, 294
 - 12.8.2 Domestic and hybridizing invasive aquatic species, 294
 - 12.8.3 Invasive 'ecosystem engineers', 297
 - 12.8.4 Potential effects of climate change on aquatic invasive species, 298

- 12.9 Climate change and Australian aquatic ecosystems, 299**
- 12.9.1 Effects of increased water temperature, 300
 - 12.9.2 Effects of changes to the hydrological cycle and water regimes, 300
 - 12.9.3 Effects of sea-level rise, 301
 - 12.9.4 Effects of changes to atmospheric conditions, 302
 - 12.9.5 Effects of reduced snow cover and alpine warming, 302
 - 12.9.6 How do these climatic changes affect freshwater species and ecosystems?, 302
 - 12.9.7 Planned adaptation to climate change in aquatic ecosystems, 305
- 12.10 Synthesis, 307**

13 Integrating ecology and management: a synthesis, 308

- 13.1 The 'big picture': integrating ecology and management, 308
- 13.2 The 'bigger picture': integrating social, economic and political goals, 309
- 13.3 Strategic adaptive management in aquatic ecology, 311
- 13.4 Resolving conflicts in freshwater management: a role for aquatic ecologists?, 313
- 13.5 Future challenges and opportunities: where to from here?, 315
- 13.6 Synthesis, 319
