Preface	xiii
List of Contributors	xvii
1 The Multiple Roles of Various Reactive Oxygen Species (ROS) in Photosynthetic Organisms	1
<i>Franz-Josef Schmitt, Vladimir D. Kreslavski, Sergey K. Zharmukhamedov, Thomas Friedrich, Gernot Renger, Dmitry A. Los, Vladimir V. Kuznetsov, Suleyman I. Allakhverdiev</i>	
1.1 Introduction	2
1.2 Generation, Decay and Deleterious Action of ROS	7
1.3 Non-photochemical Quenching in Plants and Cyanobacteria	15
1.4 Monitoring of ROS	19
1.4.1 Exogenous ROS Sensors	20
1.4.2 Genetically Encoded ROS Sensors	25
1.4.3 Chromophore-Assisted Laser Inactivation (CALI)	28
1.5 Signaling Role of ROS	30
1.5.1 Signaling by Superoxide and Hydrogen Peroxide in Cyanobacteria	37
1.5.2 Signaling by $^1\Delta_g\text{O}_2$ and Hydrogen Peroxide in Eukaryotic Cells and Plants	41
1.6 Light-Induced ROS and Cell Redox Control and Interaction with the Nuclear Gene Expression	45
1.7 Second Messengers and Signaling Molecules in H_2O_2 Signaling Chains and (Nonlinear) Networking	49
1.8 Concluding Remarks and Future Perspectives	55
Acknowledgments	56

Abbreviations	57
References	58
2 Photooxidation of Mn-bicarbonate Complexes by Reaction Centers of Purple Bacteria as a Possible Stage in the Evolutionary Origin of the Water-Oxidizing Complex of Photosystem II	85
<i>Vasily V. Terentyev, Andrey A. Khorobrykh, Vyacheslav V. Klimov</i>	
2.1 Introduction	86
2.2 Appearance of Photosynthesis	87
2.3 Classification of Photosynthetic Bacteria	88
2.4 Mechanism of Light Energy Transformation during Photosynthesis	90
2.5 The Water-oxidizing Complex of Photosystem II	92
2.6 Localization and Function of Bicarbonate in Photosystem II	95
2.7 Composition and Electrochemical Properties of Mn^{2+} -bicarbonate Complexes	100
2.8 A Possible Role of Mn^{2+} -bicarbonate Complexes for the Origin and Evolution of the Inorganic Core of the Water-oxidizing Complex of Photosystem II	104
2.9 Investigation of Redox Interaction Between Mn^{2+} and Type II Reaction Centers of Anoxygenic Photosynthetic Bacteria in the Presence of Bicarbonate	107
2.10 Influence of the Redox Potential of the P^+/P Pair and Steric Accessibility of P^+ on Electron Donation from Mn^{2+} to Type II Reaction Centers from Anoxygenic Photosynthetic Bacteria in the Presence of Bicarbonate	113
2.11 Conclusions	121
Acknowledgments	122
Abbreviations	122
References	123
3 Hydrogen Metabolism in Microalgae	133
<i>Anatoly A. Tsygankov, Azat Abdullatypov</i>	
3.1 Introduction	133
3.2 Physiology of Hydrogen Metabolism	134
3.3 Hydrogenases	136
3.4 Ferredoxin	139

3.5	Nutrient Deprivation	140
3.6	Physiological Significance of Light-Dependent Hydrogen Production	146
3.7	Practical Importance of Hydrogen Photoproduction	147
3.8	Towards Practical Application of Microalgal Hydrogen Production	151
3.8.1	Hydrogenase Modifications	151
3.8.2	Elimination of Routes Competitive to H_2 production	152
3.8.3	The Role of Transmembrane Gradient of the Potential	153
3.9	Conclusion	154
	Acknowledgements	154
	Abbreviations	154
	References	155
4	The Structure and Regulation of Chloroplast ATP Synthase	163
	<i>Alexander N. Malyan</i>	
4.1	Introduction	163
4.2	The Structure and Functional Basics of Chloroplast ATP Synthase	164
4.3	The Thiol-Dependent Mechanism of Chloroplast ATP Synthase Regulation	166
4.4	The Nucleotide-Dependent Mechanism of Chloroplast ATP Synthase Regulation	167
4.5	The Properties and the Role of Chloroplast ATPase Noncatalytic Sites	168
4.6	Conclusion	173
	Abbreviations	173
	References	173
5	Structural and Functional Organization of the Pigment-Protein Complexes of the Photosystems in Mutant Cells of Green Algae and Higher Plants	179
	<i>Vladimir G. Ladygin</i>	
5.1	Introduction	180
5.2	The Mutants as Model Objects	182
5.2.1	Effects of Mutagenic Agents	182
5.2.2	Obtaining Mutants	182
5.3	The Chlorophyll-Protein Complexes	185
5.3.1	Pigment Content of Individual Complexes	185

5.3.2	Identification of Chlorophyll-Protein Complexes	188
5.3.3	Polypeptide Composition of Individual Complexes	188
5.4	Spectral Properties of Native Chlorophyll-Protein Complexes	189
5.4.1	Spectral Forms of Chlorophyll in Native Complexes	189
5.4.2	Fluorescence Spectra of the Chlorophyll in Native Complexes	190
5.5	Functional Organization of the Photosystems	195
5.5.1	Photosynthetic Activity	195
5.5.2	The Value of Photosynthetic Unit	197
5.5.3	The Number of the Reaction Centers of Photosystems	197
5.6	Structural Localization of the Photosystem in Chloroplast Thylakoids	201
5.6.1	Spatial Localization of the Photosystem in Thylakoid Membranes	201
5.6.2	Localization of Carotenoids in Pigment-Protein Complexes of the Photosystems	210
5.7	Molecular Organization of the Complexes of Photosystem I and II	213
5.7.1	Structure of the Complex of Photosystem I	213
5.7.2	Structure of the Complex of Photosystem II	217
5.7.3	The Core Complex of Photosystem II	220
	Abbreviations	222
	References	222
6	Photosynthetic Carbon Metabolism: Strategy of Adaptation over Evolutionary History	233
	<i>Irina R. Fomina, Karl Y. Biel</i>	
6.1	Introduction	234
6.2	Photosynthesis in Prokaryotes	235
6.2.1	What Was the First Autotroph on Our Planet?	235
6.2.2	Green Non-Sulfur Bacteria, Green Sulfur Bacteria, Heliobacteria: from the Archaic Way of Carbon Reduction to the Arnon-Buchanan Cycle	240

6.2.3	Purple Bacteria: The Emergence of the Reductive Pentose Phosphate Cycle – Biochemical “Add-ons” to the Arnon-Buchanan Cycle	245
6.2.4	Cyanobacteria: The Reductive Pentose Phosphate Cycle Becomes the Main Path of Carbon in Photosynthesis	247
6.2.5	The Main Stages of Development of Photosynthetic Carbon Metabolism in Prokaryotes	249
6.3	Photosynthesis in Eukaryotes	250
6.3.1	C ₃ plants: Photosynthesis via the Reductive Pentose Phosphate or Benson-Bassham-Calvin cycle	250
6.3.2	C ₄ plants: Cooperative Photosynthesis	254
6.3.3	CAM-plants: Crassulacean Acid Metabolism	259
6.3.4	C ₄ -CAM plants: Cooperation of the Second Order	262
6.4	About Compartmentalization and Cooperation between the Reduction and Oxidation Reactions in Photosynthetic Cells	264
6.5	Examples of Physiological Adaptation of Photosynthetic Carbon Metabolism to Environmental Factors at the Cellular, Tissue, and Organism Levels	266
6.5.1	Cooperative Relationship of Phototrophic Endosymbionts and Heterotrophic Host Cells with Carbon Assimilation	266
6.5.2	The Protective Role of Leaf Tissues in Illuminated Plants	283
6.6	General Conclusion	293
	Acknowledgements	297
	Abbreviations	297
	References	298
7	Adaptive Changes of Photosynthetic Apparatus to Higher CO₂ Concentration	327
	<i>Anatoly A. Kosobryukhov</i>	
7.1	Introduction	327
7.2	Higher Concentration of CO ₂ and Its Effect on the Plants: History of the Question	328
7.3	Influence of the Higher CO ₂ Concentration on the Growth and Productivity of the Plants	329
7.4	Photosynthesis at Short-Term Increase of CO ₂ Concentration	331

7.5	Adaptive Changes of Photosynthetic Apparatus at Long-Term Effect of the Higher CO ₂ Concentration	332
7.6	The Role of Carbohydrate Metabolism in Regulation of the Photosynthetic Apparatus Activity at Increased CO ₂ Concentration	334
7.7	Soluble Sugars in Leaves and Other Plant Organs	337
7.8	Dependence of Photosynthetic Rate on Environmental Factors and its Regulation	338
	Abbreviations	344
	References	344
8	Photosynthetic Machinery Response to Low Temperature Stress	355
	<i>Evgenia F. Markovskaya, Anatoly A. Kosobryukhov, Vladimir D. Kreslavski</i>	
8.1	Mechanisms of Plant Adaptation to Low Temperature	355
8.2	Role of Reactive Oxygen Species	357
8.3	Plant Cell Membranes and Their Role in Response to Low Temperature	358
8.4	Hormonal Response to the Temperature	362
8.5	Phytochrome as a Receptor of Low Temperature	362
8.6	Carbohydrate Function under Low Temperature	364
8.7	Protein Changes	365
8.8	Cold Stress and Photoinhibition	367
8.9	Molecular Mechanisms of Plants' Response to Low Temperatures	368
8.10	Concluding Remarks and Future Perspectives	370
	Acknowledgments	370
	References	370
	Index	383
