

CONTENTS

Preface	ix
1 Radiation Induced Molecular Phenomena in Nucleic Acids: A Brief Introduction <i>Manoj K. Shukla and Jerzy Leszczynski</i>	1
2 Single-Reference Methods for Excited States in Molecules and Polymers <i>So Hirata, Peng-Dong Fan, Toru Shiozaki, and Yasuteru Shigeta</i>	15
3 An Introduction to Equation-of-Motion and Linear-Response Coupled-Cluster Methods for Electronically Excited States of Molecules <i>John D. Watts</i>	65
4 Exploring Photobiology and Biospectroscopy with the SAC-CI (Symmetry-Adapted Cluster-Configuration Interaction) Method <i>Jun-ya Hasegawa and Hiroshi Nakatsuji</i>	93
5 Multiconfigurational Quantum Chemistry for Ground and Excited States <i>Björn O. Roos</i>	125
6 Relativistic Multireference Perturbation Theory: Complete Active-Space Second-Order Perturbation Theory (CASPT2) with the Four-Component Dirac Hamiltonian <i>Minori Abe, Geetha Gopakumar, Takahito Nakajima, and Kimihiko Hirao</i>	157

- 7 Structure and Properties of Molecular Solutes in Electronic
Excited States: A Polarizable Continuum Model Approach
Based on the Time-Dependent Density Functional Theory 179
Roberto Cammi and Benedetta Mennucci
- 8 Nonadiabatic Excited-State Dynamics of Aromatic
Heterocycles: Toward the Time-Resolved Simulation
of Nucleobases 209
*Mario Barbatti, Bernhard Sellner, Adélia J. A. Aquino, and
Hans Lischka*
- 9 Excited-State Structural Dynamics of Nucleic Acids
and Their Components 237
Brant E. Billingham, Sulayman A. Oladepo, and Glen R. Loppnow
- 10 Ultrafast Radiationless Decay in Nucleic Acids: Insights from
Nonadiabatic Ab Initio Molecular Dynamics 265
*Nikos L. Doltsinis, Phineus R. L. Markwick, Harald Nieber, and
Holger Langer*
- 11 Decay Pathways of Pyrimidine Bases: From Gas Phase
to Solution 301
Wei Kong, Yonggang He, and Chengyin Wu
- 12 Isolated DNA Base Pairs, Interplay Between Theory
and Experiment 323
Mattanjah S. de Vries
- 13 Isolated Guanine: Tautomerism, Spectroscopy and Excited State
Dynamics 343
Michel Mons, Iliana Dimicoli, and F. Piuze
- 14 Computational Study of UV-Induced Excitations
of DNA Fragments 369
Manoj K. Shukla and Jerzy Leszczynski
- 15 Non-Adiabatic Photoprocesses of Fundamental Importance
to Chemistry: From Electronic Relaxation of DNA Bases
to Intramolecular Charge Transfer in Electron Donor-Acceptor
Molecules 395
Marek Z. Zgierski, Takashige Fujiwara, and Edward C. Lim

16 Photostability and Photoreactivity in Biomolecules: Quantum Chemistry of Nucleic Acid Base Monomers and Dimers	435
<i>Luis Serrano-Andrés and Manuela Merchán</i>	
17 Computational Modeling of Cytosine Photophysics and Photochemistry: From the Gas Phase to DNA	473
<i>Luis Blancafort, Michael J. Bearpark, and Michael A. Robb</i>	
18 From the Primary Radiation Induced Radicals in DNA Constituents to Strand Breaks: Low Temperature EPR/ENDOR Studies	493
<i>David M. Close</i>	
19 Low Energy Electron Damage to DNA	531
<i>Léon Sanche</i>	
20 Radiation Effects on DNA: Theoretical Investigations of Electron, Hole and Excitation Pathways to DNA Damage	577
<i>Anil Kumar and Michael D. Sevilla</i>	
21 Stable Valence Anions of Nucleic Acid Bases and DNA Strand Breaks Induced by Low Energy Electrons	619
<i>Janusz Rak, Kamil Mazurkiewicz, Monika Kobyłicka, Piotr Storoniak, Maciej Harańczyk, Iwona Dąbkowska, Rafał A. Bachorz, Maciej Gutowski, Dunja Radisic, Sarah T. Stokes, Soren N. Eustis, Di Wang, Xiang Li, Yeon Jae Ko, and Kit H. Bowen</i>	
Index	669
