## Part I Epigenomic Technologies and Analytical Approaches

|                                                |    |
|------------------------------------------------|----|
| <b>Strategies for Epigenome Analysis</b> ..... | 3  |
| A.B. Brinkman and H.G. Stunnenberg             |    |
| <b>Sequencing the Epigenome</b> .....          | 19 |
| Alexander Meissner and Bradley E. Bernstein    |    |
| <b>Integrating Epigenomic Results</b> .....    | 37 |
| Suk-Young Yoo and R.W. Doerge                  |    |
| <b>Visualising the Epigenome</b> .....         | 55 |
| Paul Flicek and Ewan Birney                    |    |

## Part II Roles of DNA, RNA and Chromatin in Epigenomics

|                                                                                                                              |     |
|------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Expanding View of Cytosine Methylation</b> .....                                                                      | 69  |
| J.M. Gready                                                                                                                  |     |
| <b>Structural and Biochemical Advances in Mammalian DNA Methylation</b> ..                                                   | 85  |
| Xiaodong Cheng and Robert M. Blumenthal                                                                                      |     |
| <b>Epigenetic Profiling of Histone Variants</b> .....                                                                        | 101 |
| Steven Henikoff                                                                                                              |     |
| <b>Epigenetic Phenomena and Epigenomics in Maize</b> .....                                                                   | 119 |
| Jay B. Hollick and Nathan Springer                                                                                           |     |
