List of Case Studies	xi
Preface	xiii
Acknowledgments	xvi
PART I Biodiversity and Its Importance	3
1 Conservation and Conservation Biology	4
What Is Conservation?	4
A Brief History of Conservation	5
An Overview of Conservation Ethics	10
What Is Conservation Biology?	14
A Brief History of a Young Discipline	15
Summary	20
2 What Is Biodiversity?	22
Species, Genes, and Ecosystems	22
Structure and Function	24
Measuring Biodiversity	24
The Mismeasure of Biodiversity	26
Biodiversity and Spatial Scales	26
Biodiversity Verbs	29
The Related Concepts of "Integrity" and "Sustainability"	29
Summary	33
3 Species Diversity	34
What Is a Species?	34
How Many Species Are There?	36
The Intrinsic Value of Species and Their Conservation Status	40
The Instrumental Values of Species	45
The Uniqueness Value of Species	60
Summary	63
4 Ecosystem Diversity	65
What Is an Ecosystem?	65
The Values of Ecosystems	70
Ecosystem Diversity and Species Diversity	77
Ecosystems and Landscapes	80
Summary	84
5 Genetic Diversity	86
What Is Genetic Diversity?	86
The Importance of Genetic Diversity	92

Processes that Diminish Genetic Diversity	99
Cultural Diversity	106
Summary	106
PART II Threats to Biodiversity	113
6 Mass Extinctions and Global Change	114
Extinction Episodes of the Past	114
Estimating the Current Rate of Extinction	118
The Prospect of Global Climate Change	121
Summary	128
7 Extinction Processes	130
Why Are Some Species More Vulnerable to Extinction than Others?	130
Populations	135
Population Viability Analysis	139
Summary	148
8 Ecosystem Degradation and Loss	150
Contamination	152
Roads, Dams, and Other Structures	158
Earth, Fire, Water	162
Deforestation	165
Desertification	168
Draining, Dredging, Damming, etc.	170
Fragmentation	174
Summary	182
9 Overexploitation	184
The Long History of Overexploitation	184
Types of Exploitation	188
Consequences of Overexploitation	194
Some Final Perspectives on Exploitation	197
Summary	203
10 Invasive Exotics	205
How Do Species Move?	206
Impacts of Invasive Exotics	212
Success Rates	217
Irony	218
Summary	222
PART III Maintaining Biodiversity	225
11 Protecting Ecosystems	226
Reserve Selection	228
Reserve Design	235

Reserve Management	243
Summary	247
12 Managing Ecosystems	252
Modified Ecosystems	252
Cultivated Ecosystems	261
Built Ecosystems	267
Restoring Ecosystems	270
Summary	279
13 Managing Populations	281
Providing Resources	282
Controlling Threats	287
Direct Manipulations	298
Epilogue	308
Summary	308
14 Zoos and Gardens	310
Changing Roles	310
Building Arks	312
The <i>ex Situ</i> – <i>in Situ</i> Interface	319
Conservation of Domesticated Species	322
Summary	325
PART IV The Human Factors	329
15 Social Factors	330
Values Differ	330
Describing Values	336
Values Change	338
Summary	344
16 Economics	346
The Benefits	346
The Costs	355
The Distribution of Benefits and Costs	356
Problems and Solutions	358
Summary	370
17 Politics and Action	372
Setting Priorities for Action	372
Rights and Responsibilities	379
International Agencies	379
Governments	384
Nongovernmental Organizations	385
Corporations	386
Communities	387

Individuals	388
Summary	390
Epilogue	392
Glossary	394
Literature Cited and Author Index	405
Species Index	476
Subject Index	486
