Preface	xv
1 Mitochondrial dynamics: the control of mitochondrial shape, size, number, motility, and cellular inheritance	1
IAIN SCOTT AND DAVID C. LOGAN	
1.1 Introduction	1
1.2 Endosymbiosis and mitochondrial evolution	2
1.2.1 Mitochondria and prokaryotic cell division	2
1.2.2 Plastids, the contractile ring, actomyosin and the loss of mitochondrial FtsZ	4
1.3 Chondriome structure and organisation – the discontinuous whole	6
1.4 Control of mitochondrial number, size, and gross morphology	8
1.4.1 Mitochondrial division	8
1.4.2 Mitochondrial fusion	11
1.5 Mitochondrial movement and cellular inheritance	14
1.5.1 Mitochondrial movement and the cytoskeleton	14
1.5.2 Chondriome structure and the cell cycle	15
1.5.3 Mitochondrial inheritance in yeast	16
1.5.4 <i>Arabidopsis</i> friendly mitochondria mutant and the cellular distribution of mitochondria	23
1.6 Other plant mitochondrial dynamics mutants	24
1.7 Metabolic control of mitochondrial morphology and motility	25
1.8 Concluding remarks	27
Acknowledgements	28
References	28
2 The unique biology of mitochondrial genome instability in plants	36
SALLY A. MACKENZIE	
2.1 Introduction	36
2.2 Unusual and dynamic nature of the plant mitochondrial genome	36
2.3 Mitochondrial DNA recombination is controlled by the nucleus	38
2.4 Recombination versus replication in plant mitochondrial genome dynamics	41
2.5 Nuclear regulation of mitochondrial DNA maintenance	43

2.6	Cellular and developmental responses to mitochondrial genome rearrangement in plants	44
2.7	Plant mitochondrial genome and its adaptations	45
	Acknowledgements	46
	References	46
3	Expression of the plant mitochondrial genome	50
	DOMINIQUE GAGLIARDI AND STEFAN BINDER	
3.1	Introduction	50
3.2	Identification of the pentatricopeptide repeats protein family: a key discovery toward the understanding of plant mitochondrial gene expression	51
3.2.1	Structure of PPR proteins	52
3.2.2	Functions of PPR proteins	53
3.3	Transcription in higher plant mitochondria	54
3.3.1	Conserved and variable transcription units in plant mitochondria	54
3.3.2	How many different conserved and nonconserved promoter structures are there in plant mitochondria?	55
3.3.3	What proteins are necessary for transcription of mitochondrial DNA?	57
3.3.4	Is gene expression in plant mitochondria regulated at the transcriptional level?	60
3.4	Splicing	62
3.4.1	Intron types	62
3.4.2	<i>Cis</i> - and <i>trans</i> -splicing	62
3.4.3	Splicing mechanism	63
3.4.4	Splicing machinery	65
3.5	Exchange of nucleotide identity by RNA editing	66
3.5.1	Distribution of RNA editing in the plant kingdom	66
3.5.2	Function and consequences of RNA editing	67
3.5.3	Mechanism and biochemistry of the RNA-editing process in higher plant mitochondria	68
3.5.4	Upstream <i>cis</i> elements specify editing sites	69
3.6	5' and 3' processing of plant mitochondrial transcripts	70
3.6.1	5' and 3' processing machinery	70
3.6.2	tRNA processing	71
3.6.3	rRNA processing	72
3.6.4	mRNA processing	74
3.6.4.1	Processing of 5' extremities	74
3.6.4.2	Processing of 3' extremities	76
3.7	Stabilization and degradation of RNA	77
3.7.1	<i>Cis</i> and <i>trans</i> elements stabilizing mRNA	78
3.7.2	Mechanism of RNA degradation	78
3.7.3	Roles of RNA degradation	80

3.8	Translation and posttranslational control	81
3.8.1	Translational machinery	81
3.8.2	Translational control	82
3.8.3	Posttranslational control	83
3.9	Concluding remarks	83
	Acknowledgements	84
	References	84
4	Import of nuclear-encoded mitochondrial proteins	97
	ELZBIETA GLASER AND JAMES WHELAN	
4.1	Introduction	97
4.2	Mitochondrial-targeting signals	98
4.2.1	Features of mTPs	99
4.2.2	Dual-targeting peptides	101
4.3	Cytosolic factors	103
4.4	Sorting of precursors between mitochondria and chloroplasts	105
4.5	Translocation machinery	106
4.5.1	Translocase of the outer membrane – the discriminating outer membrane	106
4.5.2	Rediscovered intermembrane space	109
4.5.3	Inner membrane – a tale of two Tims and more	109
4.5.4	The matrix – the engine room	112
4.6	Proteolytic events	112
4.6.1	Mitochondrial processing peptidase, MPP	113
4.6.1.1	Integration of plant MPP into the cytochrome bc_1 complex of the respiratory chain	113
4.6.1.2	Catalysis and substrate specificity of MPP	114
4.6.2	Mitochondrial intermediate peptidase, MIP	116
4.6.3	Inner membrane peptidase, IMP	117
4.6.4	Mitochondrial peptidasome, the presequence protease, PreP	118
4.6.4.1	Identification, intracellular localization and expression of PreP	118
4.6.4.2	Catalysis and substrate specificity of PreP	120
4.6.5	A membrane-bound ATP-dependent protease, FtsH	121
4.6.6	Lon-like ATP-dependent proteases	122
4.6.7	ATP-dependent Clp protease	123
4.6.8	An integral membrane Rhomboid protease	124
4.7	Evolution of protein import components	125
4.8	Genomic perspective of mitochondrial protein import components	127
4.9	Concluding remarks	127
	Acknowledgments	128
	References	128

5 Mitochondrial respiratory complex biogenesis: communication, gene expression and assembly	141
PHILIPPE GIEGÉ	
5.1 Introduction	141
5.2 Biogenesis of prosthetic groups essential for respiration	143
5.2.1 Mitochondrial Fe-S clusters biogenesis	143
5.2.2 Late steps of heme B synthesis	145
5.2.3 Heme A synthesis	147
5.3 Mitochondrial respiratory complexes assembly	148
5.3.1 Complex I assembly	148
5.3.2 Cytochrome <i>c</i> maturation is required for the biogenesis of complex III	149
5.3.3 Complex IV assembly	150
5.3.4 Complex V assembly	152
5.4 Gene expression for the biogenesis of mitochondrial respiratory complexes	153
5.4.1 Nuclear co-ordination of the expression of electron transport chain genes	153
5.4.2 Co-ordination between mitochondrial and nuclear gene expression	155
5.5 Mitochondria-nucleus cross talk	158
5.5.1 Clues for plant mitochondrial retrograde signalling	158
5.5.2 Potential components of retrograde-signalling pathways	160
5.6 Concluding remarks	161
Acknowledgements	162
References	162
6 Supramolecular structure of the oxidative phosphorylation system in plants	171
JESCO HEINEMEYER, NATALYA V. DUDKINA, EGBERT J. BOEKEMA AND HANS-PETER BRAUN	
6.1 Introduction	171
6.2 Structure and function of OXPHOS complexes I-V	171
6.2.1 Complex I	172
6.2.2 Complex II	172
6.2.3 Complex III	172
6.2.4 Complex IV	173
6.2.5 Complex V	173
6.3 Supramolecular organization of the OXPHOS system	173
6.3.1 Solid-state versus fluid-state model	173
6.3.2 Composition of OXPHOS supercomplexes in plants	176
6.3.3 Structure of OXPHOS supercomplexes in plants	177
6.3.4 Function of OXPHOS supercomplexes in plants	178

6.4	Concluding remarks	179
	Acknowledgments	180
	References	180
7	Mitochondrial electron transport and oxidative stress	185
	IAN M. MØLLER	
7.1	Introduction	185
7.2	The standard electron transport chain	185
7.2.1	The standard ETC complexes	185
7.2.1.1	Complex I	187
7.2.1.2	Complex II	187
7.2.1.3	Complex III	187
7.2.1.4	Complex IV	187
7.2.2	Other "standard" ETC enzymes	187
7.3	The alternative oxidase	188
7.4	NAD(P)H dehydrogenases	188
7.4.1	Basic properties	188
7.4.2	Physiology of the NAD(P)H dehydrogenases	190
7.4.3	Alamethicin is a useful tool to study respiration in intact cells and isolated mitochondria	190
7.5	Substrates for the NAD(P)H dehydrogenases	191
7.5.1	NAD(P) transport, synthesis and degradation	191
7.5.2	The reduction level of NAD(P)	191
7.5.3	Free versus bound NADH	192
7.5.4	Transhydrogenase	192
7.6	Oxidative stress – ROS turnover	193
7.6.1	Minimising ROS production	193
7.6.2	Removal or detoxification of ROS	195
7.6.2.1	ROS removal by SOD and (possibly) catalase	195
7.6.2.2	The ascorbate/glutathione cycle	196
7.6.2.3	Glutathione peroxidases	196
7.6.2.4	The thioredoxin and thioredoxin reductase system	197
7.6.2.5	Peroxiredoxin	197
7.7	Mitochondrial DNA and lipid oxidation	197
7.7.1	DNA oxidation	198
7.7.2	Lipid oxidation	198
7.8	Mitochondrial protein oxidation	199
7.8.1	Reaction with ROS	199
7.8.2	Identification of oxidised mitochondrial proteins	199
7.8.3	Enzymes interacting with ROS as part of their function	202
7.8.4	Conjugation with products of PUFA oxidation	203

7.9	Fate of oxidised proteins	203
7.10	How to prevent the transfer of oxidative damage to the next generation?	204
7.11	Concluding remarks	205
	Acknowledgements	205
	References	205
8	Mitochondrial metabolism	212
	ADRIANO NUNES-NESI AND ALISDAIR R. FERNIE	
8.1	Introduction	212
8.2	Metabolic pathways of the mitochondria	213
8.2.1	Enzymes of the TCA cycle	213
8.2.1.1	Pyruvate dehydrogenase complex	214
8.2.1.2	NAD-malic enzyme	218
8.2.1.3	Citrate synthase	219
8.2.1.4	Aconitase	219
8.2.1.5	Isocitrate dehydrogenase	220
8.2.1.6	2-oxoglutarate dehydrogenase complex	222
8.2.1.7	Succinyl-CoA ligase	223
8.2.1.8	Succinate dehydrogenase	223
8.2.1.9	Fumarase	224
8.2.1.10	Malate dehydrogenase	225
8.3	Mitochondrial electron transport	226
8.3.1	Complex I	226
8.3.2	Complex II	227
8.3.3	Complex III	228
8.3.4	Complex IV	228
8.3.5	Complex V	228
8.3.6	Alternative oxidase	229
8.3.7	Additional NADH-dehydrogenases	229
8.4	Carriers	231
8.5	Amino acid metabolism	233
8.5.1	Cysteine	233
8.5.2	Proline	234
8.5.3	Glycine	234
8.5.4	Branched-chain amino acids	236
8.6	Biosynthesis of vitamins and lipids	237
8.6.1	Lipoic acid	237
8.6.2	Biotin	237
8.6.3	Thiamine	239
8.6.4	Folate	239
8.6.5	Isoprenoids	241
8.6.6	Lipids	241

8.7	Role of mitochondrial metabolism in biological processes	242
8.7.1	Respiratory activity in the light	242
8.7.2	Provision of mitochondrial ATP to support cytosolic sucrose synthesis	244
8.7.3	A role for the reactions converting acetyl CoA to α -ketoglutarate in nitrogen assimilation	245
8.7.4	Export of redox equivalents to support photorespiration	248
8.7.5	Improved photosynthetic performance by modification of TCA cycle activity	249
8.7.6	Mitochondrial metabolism and floral development	253
8.7.7	Role of mitochondrial metabolism in root nutrient uptake	254
8.7.8	Metabolic activity of mitochondria during climacteric fruit ripening	255
8.8	Concluding remarks – future prospects for improved understanding of the interaction between mitochondrial and extra-mitochondrial metabolism	256

10 The mitochondrion and plant programmed cell death	308
MARK DIAMOND AND PAUL F. MCCABE	
10.1 Introduction	308
10.2 Programmed cell death	309
10.3 Death programmes	310
10.4 The mitochondrion and mammalian apoptosis	311
10.5 Mitochondrial structural and physiological changes during PCD	314
10.6 Roles of mitochondrial apoptogenic proteins in plant PCD	317
10.6.1 Cytochrome <i>c</i> and plant PCD	317
10.6.2 AIF and EndoG	319
10.7 Release mechanisms for mitochondrial factors	319
10.7.1 Bcl-like proteins and plant PCD	320
10.7.2 The PTP and plant PCD	321
10.8 Reactive oxygen species	324
10.9 Alternative oxidase	326
10.10 The involvement of <i>de novo</i> protein synthesis in plant PCD	327
10.11 Concluding remarks	328
