Part I Systems Biology: An Overview

1 Systems Biology: Principles and Applications in Plant Research	3
<i>G.M. Coruzzi, A. Burga, M.S. Katari and R.A. Gutiérrez</i>	
1.1 Introduction	4
1.2 Network biology	6
1.3 Experimental approaches for plant systems biology	10
1.4 Strategies for genomic data integration	21
1.5 Systems biology in plant research	26
1.6 Conclusion	31
2 An Overview of Systems Biology	41
<i>R. Albert and S.M. Assmann</i>	
2.1 Systems theory and biology	41
2.2 Graph elements and network attributes	42
2.3 Building biological networks: identifying nodes and mapping interactions	47
2.4 Building biological networks: computational methods for network inference	52
2.5 Biological network models: data integration	54
2.6 Biological network models: from network structure to dynamics	56
2.7 Perspectives	57
3 Prokaryotic Systems Biology	67
<i>T. Kacmarczyk, P. Waltman and R. Bonneau</i>	
3.1 Introduction	67
3.2 Types of questions	68
3.3 A typical prokaryotic systems biology project	70
3.4 Global models	70
3.5 Comparative functional genomics of prokaryotes	71
3.6 Review of core technologies for prokaryotic systems biology	72
3.7 <i>Caulobacter crescentus</i>	77

3.8	<i>Bacillus subtilis</i>	86
3.9	<i>Escherichia coli</i>	95
3.10	<i>Halobacterium salinarum</i> NRC-1	109
3.11	Conclusion	122
4	Animal Systems Biology: Towards a Systems View of Development in <i>C. Elegans</i>	137
	<i>A. Fernandez, F. Piano and K.C. Gunsalus</i>	
4.1	Why <i>C. elegans</i> as a model for developmental systems biology?	138
4.2	Defining in vivo functions during development: towards a phenome map of <i>C. elegans</i> embryogenesis	140
4.3	Data integration: towards a systems view of early embryogenesis	151
4.4	Conclusion	159
	Part II Plant Systems Biology: Enumerating and Integrating the System Components	
5	Software Tools for Systems Biology: Visualizing the Outcomes of N Experiments on M Entities	169
	<i>C. Poultney and D. Shasha</i>	
5.1	The worthwhile challenge of interdisciplinary work	169
5.2	Sungear design principles	171
5.3	Combining visualization tools for plant systems biology	182
5.4	MapMan	183
5.5	Genevestigator	185
5.6	Cytoscape	187
5.7	VirtualPlant	189
5.8	Conclusion	192
6	The Plant Genome: Decoding the Transcriptional Hardwiring	196
	<i>E. Grotewold and N. Springer</i>	
6.1	Introduction	196
6.2	The plant basal transcriptional apparatus	197
6.3	Plant transcription factors	201
6.4	Hard wiring of regulatory sequences	207
6.5	Plant transcriptional regulatory motifs, modules and networks	216
6.6	Conclusion	217
7	The RNA World: Identifying miRNA-Target RNA Pairs as Possible Missing Links in Multi-Network Models	229
	<i>P.J. Green and B.C. Meyers</i>	
7.1	Introduction	230
7.2	Sequencing of small RNAs	232

7.3	Identification of miRNAs	233
7.4	Identification of miRNA targets	235
7.5	MicroRNA-target mRNA pairs: missing links in multi-network models?	236
8	Proteomics: Setting the Stage for Systems Biology	243
	<i>S.C. Peck</i>	
8.1	Introduction: the need for proteomics in systems biology	243
8.2	Determination of protein location in the cell	244
8.3	Identification of different protein forms	246
8.4	Quantitation	248
8.5	Conclusion	254
9	Metabolomics: Integrating the Metabolome and the Proteome for Systems Biology	258
	<i>W. Weckwerth</i>	
9.1	The molecular hierarchy in biochemical networks, the concept of systems biology and functional genomics in the post-genome era	259
9.2	Metabolomics and proteomics: post-genome disciplines intimately bound to mass spectrometric techniques	261
9.3	Metabolomics: global analysis of rapid metabolic responses combined with computer-aided iterative metabolic modelling	261
9.4	Application of metabolomics in molecular plant physiology and biochemistry	269
9.5	Measuring the key players: proteomics	273
9.6	Combining metabolomics, proteomics and multivariate data mining: a systems biology approach	279
9.7	Conclusion	281
10	From the Ionome to the Genome: Identifying the Gene Networks that Control the Mineral Content of Plants	290
	<i>M.L. Guerinot, I. Baxter and D.E. Salt</i>	
10.1	Introduction	290
10.2	Analytical platforms for ionomics	291
10.3	Bioinformatics platforms for ionomics	294
10.4	Arabidopsis as a model system for ionomics	295
10.5	Evolutionary context for ionomics	298
11	Development and Systems Biology: Riding the Genomics Wave Towards a Systems Understanding of Root Development	304
	<i>S.M. Brady and P.N. Benfey</i>	
11.1	Roots and systems biology	304
11.2	Why study roots?	305

11.3	Root development in the model plant, <i>Arabidopsis thaliana</i>	305
11.4	Systems biology at the molecular level: modelling a root transcriptional network	308
11.5	Identification of components	309
11.6	Component modelling	314
11.7	Systems biology at the cellular level: modelling root growth and the dynamic behaviour of its component cells	317
11.8	Systems biology: modelling the root physical network	323
11.9	Future directions	327
12	Perspectives on Ecological and Evolutionary Systems Biology <i>C.L. Richards, Y. Hanzawa, M.S. Katari, I.M. Ehrenreich, K.E. Engelmann and M.D. Purugganan</i>	331
12.1	Emergent properties of systems biology, ecology and evolution	332
12.2	Complex environments and ecological systems biology	332
12.3	Gene networks and the ecological transcriptome	333
12.4	Analysis of systems biology data: the role of ecological and evolutionary methods	335
12.5	The ecological and evolutionary context of model organisms: the example of <i>Arabidopsis</i> and beyond	336
12.6	Natural variation in genomes and gene networks	339
12.7	The future of ecological and evolutionary systems biology	343
	Index	351
	Color plate (between pages 176 and 177)
