

CONTENTS

Contributors	x
Preface	xiii
Glossary	xv
1 Putting <i>Physcomitrella patens</i> on the Tree of Life: The Evolution and Ecology of Mosses	1
<i>Brent D. Mishler and Melvin J. Oliver</i>	
1.1 Introduction to <i>Physcomitrella</i>	1
1.2 The position of <i>P. patens</i> on the Tree of Life	2
1.3 Relationships within the mosses	4
1.4 Evolution and ecology of the mosses	6
1.5 General implications for evolutionary processes in mosses	12
2 The Genetic Basis of Natural Variation in Bryophyte Model Systems	16
<i>Stuart F. McDaniel</i>	
2.1 Introduction	17
2.2 Genetic variation among bryophyte populations	17
2.3 Mapping genes underlying natural variants	26
2.4 Assigning genes to phenotypes	32
3 Comparative Genomics	42
<i>Stefan A. Rensing, Daniel Lang, and Andreas D. Zimmer</i>	
3.1 Introduction	42
3.2 A short history of <i>P. patens</i> genomics	47
3.3 Features of the <i>P. patens</i> nuclear genome	52
3.4 Comparisons with seed plants and algae	60
3.5 Computational resources for <i>P. patens</i>	66
3.6 Conclusions and outlook	67
4 Gene targeting	76
<i>Yasuko Kamisugi and Andrew C. Cuming</i>	
4.1 Introduction	76
4.2 Gene targeting in eukaryotes	77
4.3 Gene targeting in <i>P. patens</i> : practical aspects	81
4.4 Targeted gene replacement versus targeted insertion	96
4.5 Mechanisms of gene targeting	98
4.6 Unanswered questions and future prospects	105

5	The Small RNAs of <i>Physcomitrella patens</i> : Expression, Function and Evolution	113
	<i>Michael J. Axtell</i>	
5.1	Introduction to small RNAs	113
5.2	Classes of small silencing RNAs	114
5.3	Expression of <i>P. patens</i> small RNAs	118
5.4	Biogenesis of <i>P. patens</i> small RNAs: Dicers, Slicers and other utensils	127
5.5	Targets of <i>P. patens</i> small RNAs	130
5.6	Evolution of plant miRNAs	133
5.7	Conclusions	137
6	Tip Growth in the Moss <i>Physcomitrella patens</i>	143
	<i>Magdalena Bezanilla and Pierre-François Perroud</i>	
6.1	Introduction	143
6.2	Morphology and structure of a tip cell	144
6.3	Environmental signals affecting polar cell elongation	147
6.4	Cellular structural components involved in polar cell elongation	149
7	Gametangia Development in the Moss <i>Physcomitrella patens</i>	167
	<i>Rumiko Kofuji, Takeshi Yoshimura, Haruko Inoue, Keiko Sakakibara, Yuji Hiwatashi, Tetsuya Kurata, Tsuyoshi Aoyama, Kunihiko Ueda, and Mitsuyasu Hasebe</i>	
7.1	Introduction	168
7.2	Development of the gametangia	169
7.3	Development of the gametangia after fertilization is accompanied by growth of the sporophyte	171
7.4	Gene-trap lines with GUS expression in the gametangia	171
7.5	Future prospects	173
8	Chloroplasts	182
	<i>Mamoru Sugita and Setsuyuki Aoki</i>	
8.1	Chloroplasts of <i>Physcomitrella patens</i>	183
8.2	Plastid DNA	185
8.3	Transcription of plastid genes by two plastid RNA polymerases PEP and NEP	189
8.4	Rhythmic expression of the plastid <i>PsbD</i> gene	194
8.5	Post-transcriptional regulation in plastids	196
8.6	Plastid transformation	198
8.7	Chloroplast import	199
8.8	Plastid division	200
8.9	Chloroplast movement	202

9	Carbon and Energy Metabolism	211
	<i>Mattias Thelander, Anders Nilsson, and Hans Ronne</i>	
9.1	Introduction	211
9.2	Carbon and energy allocation	213
9.3	Sucrose metabolism and transport	217
9.4	Hexose metabolism and transport	221
9.5	Energy homeostasis and Snf1-related kinases	227
9.6	Conclusions	239
9.7	Technical note on database searches and tree construction	240
10	Hormonal Regulation of Development by Auxin and Cytokinin in Moss	246
	<i>Klaus von Schwartzberg</i>	
10.1	Major plant hormone routes are established in bryophytes	247
10.2	Auxin	249
10.3	Cytokinin	256
10.4	Auxin and cytokinin interaction	269
10.5	Other growth regulating substances	270
11	The Role of Abscissic Acid in Stress Tolerance	282
	<i>Sung Hyun Cho, Klaus von Schwartzberg, and Ralph Quatrano</i>	
11.1	Introduction	283
11.2	Tolerance of <i>P. patens</i> to abiotic stresses and the effects of ABA	286
11.3	Physiological and morphological changes during the establishment of tolerance	287
11.4	Expression of stress-related genes	288
11.5	Global responses to stress at the transcription level	291
11.6	The ABA-signalling pathway	292
11.7	Conclusions	293
12	Pathogenesis in Mosses	298
	<i>Michael Lawton and Hemalatha Saidasan</i>	
12.1	Introduction	299
12.2	Recent advances in molecular plant pathology	300
12.3	Experimental advantages of <i>P. patens</i>	304
12.4	Developing a <i>P. patens</i> pathosystem	308
12.5	Responses of <i>P. patens</i> to infection	318
12.6	Selecting <i>P. patens</i> genes for functional studies of disease	321
12.7	Future directions and opportunities	323
	Index	339
	Color plates (between pages 174 and 175)
