Preface	xi
1 Definitive case studies	1
<i>Norman Owen-Smith and Jason P. Marshal</i>	
1.1 Red deer on Rum	2
1.2 Soay sheep on Hirta	5
1.3 Roe deer in France	8
1.4 Bighorn sheep in Alberta	10
1.5 Kudu in Kruger	13
1.6 Wildebeest in Serengeti	15
1.7 Moose on Isle Royale	18
1.8 Elk in North Yellowstone	20
1.9 Overview	22
Acknowledgments	28
References	28
2 The suite of population models	34
<i>Norman Owen-Smith</i>	
2.1 Models of density dependence	36
2.2 Autoregressive time-series models	40
2.3 Age- or stage-structured models	43
2.4 Trophic interaction models	49
2.5 Physiological or metaphysiological models	52
2.6 Models accommodating spatial structure	53
2.7 Individual-based models	54
2.8 Overview	54
Acknowledgments	57
References	57
3 Climatic influences: temperate-tropical contrasts	63
<i>Norman Owen-Smith</i>	
3.1 Temperate environments	65
3.2 Tropical and subtropical environments	77

3.3	Effects of predation and hunting	86
3.4	Overall assessment	88
	Acknowledgments	90
	References	90

4 Demographic processes: lessons from long-term, individual-based studies **98**

Jean-Michel Gaillard, Tim Coulson and Marco Festa-Bianchet

4.1	Life history of large herbivores: a brief review	99
4.2	Differential contributions of demographic parameters to population growth	103
4.3	Climatic variation, density-dependence, and individual variability	106
4.4	Conclusions: how can future analyses of large herbivore demography deal with complex demographic processes?	108
	Acknowledgments	110
	References	110

5 Irruptive dynamics and vegetation interactions **117**

John E. Gross, Iain J. Gordon and Norman Owen-Smith

5.1	Models of herbivore-vegetation interactions	118
5.2	Examples of irruptive dynamics	122
5.3	Effects of irruptions on vegetation	127
5.4	Changing perspectives	128
5.5	Synthesis	132
5.6	Implications for conservation and management	133
	Acknowledgments	135
	References	135

6 How does landscape heterogeneity shape dynamics of large herbivore populations? **141**

N. Thompson Hobbs and Iain J. Gordon

6.1	What is spatial heterogeneity?	143
6.2	How does spatial heterogeneity influence ungulate population dynamics?	143
6.3	Mechanisms explaining the influence of spatial heterogeneity on population dynamics	148
6.4	Influences from high-quality resources	151
6.5	Influences from buffer resources	154
6.6	Global change and access to heterogeneity by large herbivores	155
6.7	Conclusions: the importance of spatial context for population dynamics	157
	Acknowledgments	158
	References	158

7	Towards an ecology of population dynamics	165
	<i>Norman Owen-Smith</i>	
7.1	Phenomenological descriptors	167
7.2	Time series elaborations	171
7.3	Environmental structure	174
7.4	Population structure	183
7.5	Adaptive responses and environmental contexts	188
7.6	Summary and conclusions	190
	Acknowledgments	190
	References	190
	Index	197
