About the Authors	xv
Preface	xvii

Overview	1
----------	---

Mendel's Laws of Heredity	6
---------------------------	---

Mendel's First Law of Heredity	7
--------------------------------	---

BOX 2.1 Gregor Mendel's Luck	8
-------------------------------------	---

Huntington Disease	10
--------------------	----

Phenylketonuria	11
-----------------	----

BOX 2.2 How Do We Know That 1 in 50 People Are Carriers for PKU?	13
---	----

Mendel's Second Law of Heredity	14
---------------------------------	----

Summary	18
---------	----

Beyond Mendel's Laws	20
----------------------	----

Genes on the X Chromosome	21
---------------------------	----

Other Exceptions to Mendel's laws	23
New Mutations	23
Changes in Chromosomes	23
Expanded Triplet Repeats	25
Genomic Imprinting	26
Complex Traits	28
Schizophrenia	28
General Cognitive Ability	29
Pea Size	30
Multiple-Gene Inheritance	32
Quantitative Genetics	34
BOX 3.1 Liability-Threshold Model of Disorders	36
Summary	38

• CHAPTER 4

DNA: The Basis of Heredity 39

DNA	39
-----	----

BOX 4.1 The "Central Dogma" of Molecular Genetics	44
--	----

Chromosomes	46
-------------	----

Summary	49
---------	----

• CHAPTER 5

Animal Models in Behavioral Genetics 50

Quantitative Genetic Experiments to Investigate Animal Behavior	50
---	----

Selection Studies	52
-------------------	----

Inbred Strain Studies	57
-----------------------	----

Animal Studies for Identifying Genes and Gene Functions	60
---	----

Creating Mutations	61
--------------------	----

Quantitative Trait Loci	66
-------------------------	----

Synteny Homology	71
------------------	----

Summary	71
---------	----

• CHAPTER 6

Nature, Nurture, and Human Behavior 73

Investigating the Genetics of Human Behavior	74
--	----

Adoption Designs	74
------------------	----

BOX 6.1	The First Adoption Study of Schizophrenia	77
BOX 6.2	Issues in Adoption Studies	78
	Twin Design	78
BOX 6.3	The Twin Method	82
	Combination	84
	Summary	85

• CHAPTER 7

Estimating Genetic and Environmental Influences	86
Heritability	86
Interpreting Heritability	89
BOX 7.1	
Estimating Quantitative Genetic Parameters Directly from DNA	90
Environmentality	95
Shared Environment	96
Nonshared Environment	96
Estimating Shared and Nonshared Environmental Influences	97
Identifying Specific Nonshared Environment	98
Identifying Specific Nonshared Environment That Predicts Behavioral Outcomes	100
Multivariate Analysis	102
Summary	103

• CHAPTER 8

The Interplay between Genes and Environment	105
Beyond Heritability	106
Genotype-Environment Correlation	107
The Nature of Nurture	108
Three Types of Genotype-Environment Correlation	111
Three Methods to Detect Genotype-Environment Correlation	112
Implications	117
Genotype-Environment Interaction	118
Animal Models	120
Adoption Studies	120

Twin Studies	122
DNA	123
Summary	126

• CHAPTER 9

Identifying Genes 128

Mutations	129
Detecting Polymorphisms	130

BOX 9.1 DNA Markers	132
----------------------------	-----

Human Behavior	134
Linkage: Single-Gene Disorders	135
Linkage: Complex Disorders	137
Association: Candidate Genes	137

BOX 9.2 Affected Sib-Pair Linkage Design	138
---	-----

Association: Genomewide	139
-------------------------	-----

BOX 9.3 SNP Microarrays	140
--------------------------------	-----

Summary	143
---------	-----

• CHAPTER 10

Pathways between Genes and Behavior 144

BOX 10.1 Levels of Analysis	145
------------------------------------	-----

Gene Expression and the Role of Epigenetics	146
---	-----

The Transcriptome: Gene Expression throughout the Genome	149
--	-----

Gene Expression Profiles: RNA Microarrays and Sequence-Based Approaches	149
---	-----

Genetical Genomics	151
--------------------	-----

Gene Expression as a Biological Basis for Environmental Influence	152
---	-----

The Proteome: Proteins Coded throughout the Transcriptome	153
---	-----

The Brain	155
-----------	-----

BOX 10.2 Endophenotypes	156
--------------------------------	-----

Learning and Memory	157
---------------------	-----

Emotion	160
Summary	162

CHAPTER 11

Cognitive Disabilities 163

General Cognitive Disability: Quantitative Genetics	164
---	-----

General Cognitive Disability: Single-Gene Disorders	165
---	-----

Phenylketonuria	165
-----------------	-----

Fragile X Syndrome	166
--------------------	-----

Rett Syndrome	168
---------------	-----

Other Single-Gene Disorders	168
-----------------------------	-----

General Cognitive Disability: Chromosomal Abnormalities	170
---	-----

Down Syndrome	170
---------------	-----

Sex Chromosome Abnormalities	171
------------------------------	-----

Specific Cognitive Disabilities	174
---------------------------------	-----

Reading Disability	175
--------------------	-----

BOX 11.1 DF Extremes Analysis	176
--------------------------------------	-----

Communication Disorders	180
-------------------------	-----

Mathematics Disability	181
------------------------	-----

Comorbidity among Specific Cognitive Disabilities	181
---	-----

Dementia	181
----------	-----

Summary	183
---------	-----

CHAPTER 12

General Cognitive Ability 186

Historical Highlights	188
-----------------------	-----

Animal Research	188
-----------------	-----

BOX 12.1 Francis Galton	190
--------------------------------	-----

Human Research	193
----------------	-----

Overview of Genetic Research	194
------------------------------	-----

Genetic Influence	194
-------------------	-----

Environmental Influence	196
-------------------------	-----

Assortative Mating	197
--------------------	-----

Nonadditive Genetic Variance	198
------------------------------	-----

Developmental Research	200
------------------------	-----

Does Heritability Change during Development?	200
--	-----

Do Genetic Factors Contribute to Developmental Change?	204
Identifying Genes	206
Summary	209

• CHAPTER 13

Specific Cognitive Abilities 210

Broad Factors of Specific Cognitive Abilities	210
Multivariate Genetic Analysis	217
Information-Processing Measures	218
Working Memory Model	220
Imaging Genetics	220
School Achievement	222
Identifying Genes	228
Summary	229

• CHAPTER 14

Schizophrenia 230

Family Studies	231
----------------	-----

BOX 14.1 The Beginnings of Psychiatric Genetics: Bethlem Royal and Maudsley Hospitals	232
---	-----

Twin Studies	234
Adoption Studies	236
Schizophrenia or Schizophrenias?	238
Identifying Genes	239
Summary	241

• CHAPTER 15

Other Adult Psychopathology 242

Mood Disorders	242
Family Studies	243
Twin Studies	245
Adoption Studies	246
Identifying Genes	247

Anxiety Disorders	248
Other Disorders	250
Co-Occurrence of Disorders	252
Identifying Genes	255
Summary	256

• CHAPTER 16

Developmental Psychopathology 257

Autism	258
Family and Twin Studies	258
Identifying Genes	260
Attention-Deficit and Disruptive Behavior Disorders	261
Twin Studies	262
Identifying Genes	265
Anxiety Disorders	266
Other Disorders	268
Overview of Twin Studies of Childhood Disorders	270
Summary	270

• CHAPTER 17

Personality and Personality Disorders 273

Self-Report Questionnaires	274
Other Measures of Personality	277
Other Findings	279
Situations	279
Development	279
Nature-Nurture Interplay	280
Personality and Social Psychology	280
Relationships	281
Self-Esteem	283
Attitudes and Interests	284
Behavioral Economics	285
Personality Disorders	285
Schizotypal Personality Disorder	287
Obsessive-Compulsive Personality Disorder	288
Antisocial Personality Disorder and Criminal Behavior	288
Identifying Genes	292
Summary	295

• **CHAPTER 19**

Substance Use Disorders	297
Alcohol Dependence	297
Twin and Adoption Research on Alcohol-Related Phenotypes	297
Animal Research on Alcohol-Related Phenotypes	299
Molecular Genetic Research on Alcohol-Related Phenotypes	302
Nicotine Dependence	306
Twin Research on Smoking-Related Phenotypes	307
Molecular Genetic Research on Smoking-Related Phenotypes	309
Other Drugs	311
Complexities of Studying the Genetics of Substance Use	312
Summary	313

• **CHAPTER 20**

Health Psychology and Aging	314
Health Psychology	314
Body Weight and Obesity	315
Subjective Well-Being and Health	322
Psychology and Aging	323
Health Psychology and Genetic Counseling	327
BOX 19.1 Genetic Counseling	328
Summary	329

• **CHAPTER 21**

Evolution and Behavior	330
Charles Darwin	330
Inclusive Fitness	334
Population Genetics	336
Evolutionary Genomics	338
Evolutionary Psychology	339
Instincts	340
Empirical Evidence	341
BOX 20.1 Mate Preference and the Major Histocompatibility Complex	342

BOX 20.2	Mate Selection for Facial Characteristics	344
Summary		346
CHAPTER 21		
The Future of Behavioral Genetics		348
Quantitative Genetics		348
Molecular Genetics		352
Implications of Nature and Nurture		354
APPENDIX		
Statistical Methods in Behavioral Genetics		357
1 Introduction		357
BOX A.1	Behavioral Genetic Interactive Modules	358
	About the Author	359
1.1	Variation and Covariation: Statistical Descriptions of Individual Differences	360
2 Quantitative Genetics		373
2.1	The Biometric Model	373
2.2	Estimating Variance Components	378
3 Molecular Genetics		402
3.1	Linkage Analysis	403
3.2	Association Analysis	406
Web Sites		413
Glossary		415
References		425
Name Index		NI-1
Subject Index		SI-1
