

Contents in Brief

<i>Preface</i>	xiii
1 The Genetics Revolution in the Life Sciences	1
PART I TRANSMISSION GENETICS	
2 Single-Gene Inheritance	27
3 Independent Assortment of Genes	77
4 Mapping Eukaryote Chromosomes by Recombination	115
5 The Genetics of Bacteria and Their Viruses	159
6 Gene Interaction	199
PART II FROM DNA TO PHENOTYPE	
7 Large-Scale Chromosomal Changes	235
8 DNA: Structure and Replication	279
9 RNA: Transcription and Processing	311
10 Proteins and Their Synthesis	337
11 Gene Isolation and Manipulation	367
12 Regulation of Gene Expression in Bacteria and Their Viruses	407
13 Regulation of Gene Expression in Eukaryotes	439
14 The Genetic Control of Development	473
15 Genomes and Genomics	509
PART III MUTATION, VARIATION, AND EVOLUTION	
16 The Dynamic Genome: Transposable Elements	545
17 Mutation, Repair, and Recombination	575
18 Population Genetics	609
19 The Inheritance of Complex Traits	655
20 Evolution of Genes and Traits	699
<i>A Brief Guide to Model Organisms</i>	731
<i>Appendix A: Genetic Nomenclature</i>	747
<i>Appendix B: Bioinformatics Resources for Genetics and Genomics</i>	748
<i>Glossary</i>	751
<i>Answers to Selected Problems</i>	769
<i>Index</i>	779

Contents

<i>Preface</i>	xiii
1 The Genetics Revolution in the Life Sciences	1
1.1 The Nature of Biological Information	2
<i>The molecular structure of DNA</i>	3
<i>DNA is organized into genes and chromosomes</i>	4
1.2 How Information Becomes Biological Form	9
<i>Transcription</i>	9
<i>Translation</i>	10
<i>How does life replicate itself?</i>	11
<i>Change at the DNA level</i>	12
1.3 Genetics and Evolution	14
<i>Natural selection</i>	14
<i>Constructing evolutionary lineages</i>	15
1.4 Genetics Has Provided a Powerful New Approach to Biological Research	17
<i>Forward genetics</i>	17
<i>Reverse genetics</i>	17
<i>Manipulating DNA</i>	18
<i>Detecting specific sequences of DNA, RNA, and protein</i>	18
1.5 Model Organisms Have Been Crucial in the Genetics Revolution	21
1.6 Genetics Changes Society	23
1.7 Genetics and the Future	24
PART I TRANSMISSION GENETICS	
2 Single-Gene Inheritance	27
2.1 Single-Gene Inheritance Patterns	29
<i>Mendel's pioneering experiments</i>	29
<i>Mendel's law of equal segregation</i>	32
2.2 The Chromosomal Basis of Single-Gene Inheritance Patterns	34
<i>Single-gene inheritance in diploids</i>	34
<i>Single-gene inheritance in haploids</i>	39
2.3 The Molecular Basis of Mendelian Inheritance Patterns	40
<i>Structural differences between alleles at the molecular level</i>	40
<i>Molecular aspects of gene transmission</i>	41
<i>Alleles at the molecular level</i>	44
