CHAPTER 1 ■ Introduction	1
1.1 THE IMPORTANCE OF PROTEINS IN LIVING ORGANISMS	1
1.1.1 Life, Proteins, and Mysterious Forces	1
1.1.2 The Molecular Organization of Living Organisms	2
1.1.3 Proteins Have Numerous Biological Roles	7
1.1.3.1 Catalysis of Metabolic Processes	7
1.1.3.2 Energy Transfer	20
1.1.3.3 Gene Expression	23
1.1.3.4 Transport of Solutes across Biological Membranes	24
1.1.3.5 Cellular Communication	24
1.1.3.6 Molecular Recognition	27
1.1.3.7 Defense	28
1.1.3.8 Forming Intracellular and Extracellular Structures	30
1.1.3.9 Cell/Tissue-Specific Functions	32
1.1.4 Physiological and Evolutionary Importance of Proteins	32
1.1.5 Medical, Industrial, and Social Importance of Proteins	33
1.1.5.1 Proteins as Drug Targets	33
1.1.5.2 Proteins as Toxin Targets	34
1.1.5.3 Industrial Applications of Proteins	35
1.2 STRUCTURAL COMPLEXITY AND ITS EFFECT ON PROTEIN FUNCTION	36

1.3	NON-COVALENT INTERACTIONS BETWEEN ATOMS IN BIOMOLECULES	40
1.3.1	Electrostatic Interactions	40
1.3.1.1	Introduction	40
1.3.1.2	Basic Principles	41
1.3.1.3	Hydrogen Bonds	48
1.3.1.4	Other Types of Electrostatic Interactions	53
1.3.2	van der Waals Interactions	54
1.3.3	Nonpolar Interactions and the Hydrophobic Effect	56
1.3.4	Conclusions	58
1.4	SUMMARY	58
1.5	ORGANIZATION OF THE BOOK	59
	REFERENCES	59
CHAPTER 2	Protein Structure	67
2.1	INTRODUCTION	67
2.1.1	Hierarchy in Protein Structure	67
2.1.2	Co-Enzymes and Prosthetic Groups	68
2.2	PRIMARY STRUCTURE	73
2.2.1	Amino Acids and Their Properties	73
2.2.1.1	Amino Acid Structure	73
2.2.1.2	Configuration of Amino Acids	76
2.2.1.3	Side-Chain Properties	79
2.2.1.4	Amino Acid Derivates in Proteins	99
2.2.2	The Peptide Bond	100
2.3	SECONDARY STRUCTURE	103
2.3.1	α -Helix	106
2.3.1.1	Geometry	106
2.3.1.2	Intramolecular Interactions	111
2.3.1.3	Amphipathic α -Helices	113
2.3.2	Non- α Helices	114
2.3.2.1	3_{10} Helix	115
2.3.2.2	π Helix	116
2.3.2.3	Type II Poly-Proline Helix (PPII)	116
2.3.3	β Conformation	117
2.3.4	Why Helices and Sheets?	119

2.3.5	Reverse Turns	121
2.3.5.1	β -Turn	122
2.3.5.2	Loops	123
2.3.6	Secondary Structure Preference of Amino Acids	123
2.3.6.1	α Conformation	124
2.3.6.2	β Conformation	126
2.4	TERTIARY STRUCTURE	127
2.4.1	Basic Properties of the Tertiary Structure	129
2.4.1.1	Structural Properties Required for Complex Function	129
2.4.1.2	Core versus Surface	130
2.4.1.3	Stabilizing Forces	131
2.4.2	Architecture of Proteins	131
2.4.2.1	Simple Folding Motifs	132
2.4.2.2	Complex Folds	139
2.4.2.3	Domains	147
2.4.2.4	Protein Classification	152
2.4.3	Evolutionary Conservation of Structure and Function in Proteins	158
2.4.3.1	Interests of the Individual vs. Those of the Species	158
2.4.3.2	Structure Conservation: Evolutionary Mechanisms	160
2.4.3.3	Evolution of Function	162
2.4.4	Water Molecules inside Proteins	164
2.5	QUATERNARY STRUCTURE	165
2.5.1	Introduction	165
2.5.2	Characteristics	166
2.5.2.1	Dimensions and Complexity	166
2.5.2.2	Symmetry	167
2.5.2.3	Subunit Interactions	168
2.5.3	Advantages of Quaternary Structure	169
2.5.3.1	Active Site Diversity	169
2.5.3.2	Time and Space Coupling of Metabolically Related Processes	169
2.5.3.3	Regulation of Enzyme Activity	170
2.5.3.4	Stability	170
2.5.3.5	Formation of Large Structures	171
2.5.3.6	Enhancing Protein Translation Efficiency	171

2.6	POST-TRANSLATIONAL MODIFICATIONS	171
2.6.1	Introduction	171
2.6.2	Phosphorylation	172
2.6.3	Glycosylation	175
2.6.4	Acylation	178
2.6.4.1	ϵ -N-Acetylation	178
2.6.4.2	N'-Myristoylation and S-Palmitoylation	178
2.6.4.3	Ubiquitinylation	179
2.6.5	Alkylation	180
2.6.5.1	Methylation	180
2.6.5.2	S-Prenylation	181
2.6.5.3	Adenylation	181
2.6.6	Hydroxylation and Oxidation	181
2.6.7	Proteolysis	182
2.6.8	Amidation	182
2.6.9	Addition of Metal Ions	182
2.6.9.1	Stabilization of Protein Structure	183
2.6.9.2	Ligand Binding	183
2.6.9.3	Electron Transport	184
2.6.9.4	Substrate/Co-enzyme Stabilization and/or Activation	184
2.6.10	Mixed Modifications	185
2.6.11	Pathological Aspects of Post-Translational Modifications	187
2.6.11.1	Cancer	187
2.6.11.2	Age-Related Illnesses	189
2.6.12	Identifying Post-Translational Modifications	189
2.7	SUMMARY	190
	REFERENCES	191
CHAPTER 3	Methods of Structure Determination and Prediction	209
3.1	INTRODUCTION	209
3.2	DIFFRACTION/SCATTERING METHODS	210
3.2.1	X-ray Diffraction	210
3.2.1.1	Principles	210
3.2.1.2	Working Steps	212
3.2.1.3	Information Obtained from Crystallography	214
3.2.1.4	Problems of the Method	215

3.2.2	Neutron Scattering	216
3.2.2.1	Principles	216
3.2.2.2	Advantages and Shortcomings	219
3.2.3	Electron Microscopy (EM)	219
3.2.3.1	Principles	219
3.2.3.2	General Steps	221
3.2.3.3	Advantages and Shortcomings	221
3.3	SPECTROSCOPIC METHODS	222
3.3.1	Nuclear Magnetic Resonance (NMR) Spectroscopy	222
3.3.1.1	Principles	222
3.3.1.2	Steps in Protein Structure Determination by Nuclear Magnetic Resonance (NMR) Spectroscopy	225
3.3.1.3	Advantages and Shortcomings	226
3.3.2	Electron Paramagnetic Resonance (EPR) Spectroscopy	227
3.3.3	Information Derived from Other Methods	229
3.3.3.1	Fluorescent Spectroscopy	229
3.3.3.2	Circular Dichroism (CD) Spectroscopy	229
3.4	COMPUTATIONAL METHODS FOR STRUCTURE PREDICTION	230
3.4.1	Introduction	230
3.4.2	Physical Approach	230
3.4.2.1	Calculating the Total Potential Energy of the System	231
3.4.2.2	Sampling the Configurational Space of the System	236
3.4.2.3	Limitations and Partial Solutions	239
3.4.3	Comparative Approach: Homology Modeling	243
3.4.3.1	Principles	243
3.4.3.2	Principal Steps	244
3.4.3.3	Shortcoming and Overall Efficiency	246
3.4.4	Prediction, Assessment and Verification	247
3.5	CONCLUSIONS	248
3.6	PROTEIN DATA BANK (PDB)	249
3.7	SUMMARY	251
	REFERENCES	253
CHAPTER 4 ■ Energetics and Protein Stability		263
4.1	BASIC PRINCIPLES OF THERMODYNAMICS	263
4.1.1	Introduction	263

4.1.2	Free Energy and Spontaneous Processes	264
4.1.3	Enthalpy, Entropy, and Molecular Thermodynamics	266
4.1.3.1	Enthalpy	266
4.1.3.2	Entropy	271
4.1.3.3	Computational Approaches Focus on Individual Interactions	272
4.1.4	Thermodynamics and Protein Structure	274
4.2	PROTEIN STABILITY AND THE FORCES INVOLVED	274
4.2.1	How Stable Are Proteins?	274
4.2.2	Dominant Driving Forces	275
4.2.2.1	Non-polar Interactions (ΔG_{np})	276
4.2.2.2	Configurational Entropy Effect ($-T\Delta S_{con}$)	278
4.2.3	Electrostatic Interactions (ΔG_{elec})	279
4.2.4	van der Waals Interactions (ΔG_{vdW})	283
4.2.5	Summary and Conclusions	284
4.3	PROTEIN DENATURATION AND ADAPTATION TO EXTREME CONDITIONS	285
4.3.1	Denaturation as an Experimental Tool	285
4.3.1.1	Temperature-Dependent Denaturation	286
4.3.1.2	pH-Dependent Denaturation	286
4.3.1.3	Pressure-Induced Denaturation	287
4.3.1.4	Chemical Denaturation	287
4.3.2	Adaptation of Proteins to Extreme Environments	288
4.3.2.1	Conclusions	290
4.4	STABILITY ENHANCEMENT OF INDUSTRIAL ENZYMES USING PROTEIN ENGINEERING	290
4.4.1	Enzymes in the Industry	290
4.4.2	Enzyme Engineering	291
4.4.3	Rational Engineering of Enzymes for Increased Stability	292
4.5	SUMMARY	294
	REFERENCES	296
CHAPTER 5 ■ Protein Structural Dynamics		303
5.1	INTRODUCTION	303
5.2	PROTEIN FOLDING	306
5.2.1	Kinetic Aspects	306

5.2.1.1	Levinthal's Paradox and the Energy Landscape Theory	306
5.2.1.2	Folding Models and Mechanisms	314
5.2.2	Folding <i>in vivo</i>	318
5.2.2.1	<i>In vivo</i> Factors That Complicate Folding	318
5.2.2.2	Assisted Folding	320
5.3	FOLDED STATE DYNAMICS	321
5.3.1	Spontaneous Dynamics	325
5.3.1.1	Proteins Are Conformational Ensembles	325
5.3.1.2	Statistical-Thermodynamic View of Protein Dynamics	326
5.3.1.3	Dynamics of Disordered Proteins	327
5.3.1.4	Biological Significance of Thermally Induced Conformational Changes	328
5.3.1.5	Effects of the Solvent on Protein Dynamics	331
5.3.2	External Effects on Protein Dynamics	332
5.3.2.1	Ligand-Induced Dynamics and Allostery	332
5.3.2.2	Dynamics Induced by Environmental Changes	349
5.3.2.3	Enzyme-Mediated Protein Dynamics	350
5.4	METHODS FOR STUDYING PROTEIN DYNAMICS	351
5.4.1	Tools for Studying Slow (ms–sec) to Intermediary (ns– μ s) Motions	352
5.4.2	Tools for Studying Fast Motions (fs–ps)	353
5.5	SUMMARY	354
	REFERENCES	355
CHAPTER 6	Non-Globular Proteins	367
6.1	INTRODUCTION	367
6.2	FIBROUS PROTEINS	367
6.2.1	Fiber-Based Structures Inside and Outside Cells	367
6.2.1.1	Mechanical Support	368
6.2.1.2	Tissue Organization and Cell-Environment Communication	376
6.2.1.3	Motion	377
6.2.1.4	External Structures	379
6.2.1.5	Other Roles	379
6.2.2	Fiber-Forming vs. Fibrous Proteins	381
6.2.3	Structural Differences Between Globular and Fibrous Proteins	381

6.2.4	Structure–Function Relationship in the Helical Proteins α -Keratin and Collagen	382
6.2.4.1	α -Keratin	383
6.2.4.2	Collagen	385
6.3	INTRINSICALLY UNSTRUCTURED PROTEINS	392
6.3.1	Introduction	392
6.3.1.1	Molecular Recognition	394
6.3.1.2	Entropic Chain Activity	397
6.3.2	Sequence and Structural Organization of IUPs and IDRs	398
6.3.3	Structure–Function Relationship	399
6.3.3.1	IUP Binding to Target Protein	399
6.3.3.2	Entropy Assistance-Related Roles	404
6.3.4	IUPs <i>in vivo</i>	405
6.4	SUMMARY	405
	REFERENCES	407
CHAPTER 7 ■ Membrane Proteins		415
7.1	INTRODUCTION	415
7.2	STRUCTURE AND ORGANIZATION OF BIOLOGICAL MEMBRANES	418
7.2.1	General Structure and Properties	418
7.2.2	Composition of the Lipid Bilayer	420
7.2.2.1	Glycero-Phospholipids	420
7.2.2.2	Sphingolipids	421
7.2.2.3	Sterols	422
7.2.2.4	Ethers	423
7.2.2.5	Variability	423
7.2.3	Effects of Lipid Properties on Those of the Lipid Bilayer	425
7.2.3.1	Amphipathicity	425
7.2.3.2	Asymmetry	425
7.2.3.3	Degree of Order and Thickness	426
7.2.3.4	Curvature	428
7.3	PRINCIPLES OF MEMBRANE PROTEIN STRUCTURE	430
7.3.1	Overview	430
7.3.2	Structure of Integral Membrane Proteins	431
7.3.2.1	Primary Structure	432

7.3.2.2	Secondary Structure	438
7.3.2.3	Tertiary Structure	440
7.3.3	Peripheral Membrane Proteins	448
7.4	PROTEIN–MEMBRANE INTERACTIONS	450
7.4.1	Lipid Bilayer Effects on Membrane Proteins	450
7.4.1.1	Effects of General Bilayer Properties	450
7.4.1.2	Effects of Specific Bilayer Lipids	454
7.4.2	Membrane Protein Effects on Lipid Bilayer Properties	460
7.4.2.1	Decrease in Mobility	460
7.4.2.2	Deformation and Curvature Changes	460
7.5	STRUCTURE–FUNCTION RELATIONSHIP IN MEMBRANE PROTEINS AND PEPTIDES	463
7.5.1	Anti-Microbial Peptides	463
7.5.1.1	What Are AMPs?	463
7.5.1.2	AMP Classes	464
7.5.1.3	AMP Mechanisms of Action	466
7.5.1.4	Determinants of Activity, Selectivity, and Toxicity	468
7.5.1.5	Other Mechanisms	471
7.5.1.6	Anti-Tumor Activity of AMPs	471
7.5.1.7	Bacterial Resistance to AMPs	473
7.5.2	G-Protein Coupled Receptors	474
7.5.2.1	Introduction	474
7.5.2.2	GPCR Signaling	475
7.5.2.3	Structure of GPCRs	476
7.5.2.4	GPCR and G-protein Activation	489
7.5.2.5	GPCR Desensitization	493
7.5.2.6	Conclusions	493
7.6	SUMMARY	495
	REFERENCES	496
CHAPTER 8	Protein–Ligand Interactions	515
8.1	INTRODUCTION	515
8.2	THEORIES ON PROTEIN–LIGAND BINDING	517
8.3	PROTEIN–LIGAND BINDING ENERGETICS	519
8.3.1	Total Binding Free Energy	519
8.3.1.1	Protein–Ligand Binding Displays Diverse Affinities	519

8.3.1.2	Calculating the Absolute Binding Free Energy	521
8.3.1.3	Calculating Relative Binding Energies	523
8.3.2	Thermodynamic Determinants of the Binding Energy	524
8.4	THE LIGAND-BINDING SITE	527
8.4.1	Geometric Complementarity	527
8.4.2	Electrostatic Complementarity	528
8.4.3	Binding Promiscuity	536
8.5	PROTEIN-PROTEIN INTERACTIONS	537
8.5.1	Overview	537
8.5.2	Protein-Protein Binding Domains	538
8.5.3	Structure-Function Relationships	539
8.5.3.1	Protein-Protein Interface	539
8.5.3.2	PPII Helices in Protein-Protein Interactions	547
8.6	PROTEIN-LIGAND INTERACTIONS IN DRUG ACTION AND DESIGN	548
8.6.1	Involvement of Proteins in Disease	548
8.6.2	How Drugs Work	550
8.6.2.1	Principal Modes of Action	550
8.6.2.2	Selectivity and Side-Effects	554
8.6.3	Drug Development and Design	554
8.6.3.1	General Sources of Pharmaceutical Drugs	554
8.6.3.2	Drug Development Process	555
8.6.3.3	Principal Steps in Rational Drug Design	557
8.6.3.4	Rational Drug Design Case Study: ACE Inhibitors	567
8.7	SUMMARY	578
	REFERENCES	580
	INDEX, 593
