List of tables	xi
List of figures	xiii
Author biography	xix
Acknowledgements	xxi
Preface to the second edition	xxiii
Preface to the first edition	xxv
I Modelling and networks	1
1 Introduction to biological modelling	3
1.1 What is modelling?	3
1.2 Aims of modelling	4
1.3 Why is stochastic modelling necessary?	4
1.4 Chemical reactions	9
1.5 Modelling genetic and biochemical networks	10
1.6 Modelling higher-level systems	18
1.7 Exercises	20
1.8 Further reading	20
2 Representation of biochemical networks	21
2.1 Coupled chemical reactions	21
2.2 Graphical representations	21
2.3 Petri nets	24
2.4 Stochastic process algebras	34
2.5 Systems Biology Markup Language (SBML)	36
2.6 SBML-shorthand	41
2.7 Exercises	47
2.8 Further reading	48

II	Stochastic processes and simulation	49
3	Probability models	51
3.1	Probability	51
3.2	Discrete probability models	62
3.3	The discrete uniform distribution	70
3.4	The binomial distribution	71
3.5	The geometric distribution	72
3.6	The Poisson distribution	74
3.7	Continuous probability models	77
3.8	The uniform distribution	82
3.9	The exponential distribution	85
3.10	The normal/Gaussian distribution	89
3.11	The gamma distribution	93
3.12	Quantifying "noise"	96
3.13	Exercises	97
3.14	Further reading	98
4	Stochastic simulation	99
4.1	Introduction	99
4.2	Monte Carlo integration	99
4.3	Uniform random number generation	100
4.4	Transformation methods	101
4.5	Lookup methods	106
4.6	Rejection samplers	107
4.7	Importance resampling	110
4.8	The Poisson process	111
4.9	Using the statistical programming language, R	112
4.10	Analysis of simulation output	118
4.11	Exercises	120
4.12	Further reading	122
5	Markov processes	123
5.1	Introduction	123
5.2	Finite discrete time Markov chains	123
5.3	Markov chains with continuous state-space	130
5.4	Markov chains in continuous time	137
5.5	Diffusion processes	152
5.6	Exercises	166
5.7	Further reading	168
III	Stochastic chemical kinetics	169
6	Chemical and biochemical kinetics	171
6.1	Classical continuous deterministic chemical kinetics	171

6.2	Molecular approach to kinetics	178
6.3	Mass-action stochastic kinetics	180
6.4	The Gillespie algorithm	182
6.5	Stochastic Petri nets (SPNs)	183
6.6	Structuring stochastic simulation codes	186
6.7	Rate constant conversion	189
6.8	Kolmogorov's equations and other analytic representations	194
6.9	Software for simulating stochastic kinetic networks	199
6.10	Exercises	200
6.11	Further reading	200
7	Case studies	203
7.1	Introduction	203
7.2	Dimerisation kinetics	203
7.3	Michaelis–Menten enzyme kinetics	208
7.4	An auto-regulatory genetic network	212
7.5	The <i>lac</i> operon	217
7.6	Exercises	219
7.7	Further reading	220
8	Beyond the Gillespie algorithm	221
8.1	Introduction	221
8.2	Exact simulation methods	221
8.3	Approximate simulation strategies	226
8.4	Hybrid simulation strategies	239
8.5	Exercises	245
8.6	Further reading	245
IV	Bayesian inference	247
9	Bayesian inference and MCMC	249
9.1	Likelihood and Bayesian inference	249
9.2	The Gibbs sampler	254
9.3	The Metropolis–Hastings algorithm	264
9.4	Hybrid MCMC schemes	268
9.5	Metropolis–Hastings algorithms for Bayesian inference	269
9.6	Bayesian inference for latent variable models	270
9.7	Alternatives to MCMC	274
9.8	Exercises	275
9.9	Further reading	275
10	Inference for stochastic kinetic models	277
10.1	Introduction	277
10.2	Inference given complete data	278
10.3	Discrete-time observations of the system state	281

10.4 Diffusion approximations for inference	288
10.5 Likelihood-free methods	292
10.6 Network inference and model comparison	308
10.7 Exercises	309
10.8 Further reading	310
11 Conclusions	311
Appendix A SBML Models	315
A.1 Auto-regulatory network	315
A.2 Lotka–Volterra reaction system	318
A.3 Dimerisation-kinetics model	319
References	323
Index	331
